Saturn duplicates factory in the office

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Now that its $1.9-billion car factory is up and running, Saturn Corp. is building another version of the plant inside its Spring Hill, Tenn., complex.

The carmaker is constructing a 20,000-square-foot mock-up within its Northfield administration building, where engineers will study new tooling options and proposed process changes for the actual plant nearby.

The facility will contain a mock assembly line that includes Saturn line tooling, the "three-rail" overhead chassis carriers common in assembly plants, as well as a line of 10 of Saturn's unique "skillets," the individual platforms that raise and lower Saturn vehicles to adjust to Saturn workers' needs.

The line will move at Saturn's actual factory line speed — about 50 cars an hour eventually — to ensure its realism, said Larry Mahoney, director of industrial engineering for General Motors' Chevrolet-Pontiac-Canada Group.

The "other" Saturn factory will also include a simulated engine assembly line, transmission assembly, chassis construction and final car assembly.

"If someone thinks of a way to perform a job better than we're already doing it, he can come in here and try it out without disrupting production," Mahoney said. "This will be where we work out new ideas and learn how to implement them."

Among its first questions will be whether the assembly line should somehow tilt or flip the space frames on which Saturns are built as they move through the plant. Saturns are built as aluminum space frames with plastic and steel panels hung on. Mahoney indicated that certain jobs could be better performed if the frames were positioned differently.

Mahoney said he is on loan to Saturn from C-P-C to build the Workplace Development Center, and that similar centers may be developed at other GM plants.

The Saturn center, scheduled to be completed in August, will double as a training center for the 5,000-member Saturn work force.

Two of GM's in-house component makers, Paccard Electric Division and AC Rochester, have long operated factory mock-ups to develop component-assembly ideas. But Mahoney said the Saturn center is the only such facility for total car assembly.

He declined to reveal the cost of the center, but said it is "considerable."

Corrections

- A story in the June 3 issue incorrectly stated that Buick was not among the top 10 nameplates in J.D. Power and Associates' 1991 Initial Quality Survey. Buick tied for 10th place, with Mazda and Oldsmobile. (Survey results are on Page 8.)
- A bill in the California legislature would allow a buyer to cancel a new-car purchase within 24 hours if the buyer leaves the car with the dealer and pays a cancellation fee. A June 3 story incorrectly said buyers would have to leave their vehicles before a deal is final.

May sales offer glimmer of hope to automakers

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Automakers sold more vehicles in May than in any other month this year — but sales still were 11.7 percent below the 1990 figure.

May's total of 1,156,954 cars and light trucks topped April by more than 100,000 units, and it was more than 300,000 better than January's disastrous tally.

Nevertheless, the 11.7 percent decline was measured against a poor performance a year ago.

Car sales and truck sales declined about equally. Cars dropped 11.8 percent, to 769,500. Trucks were down 11.5 percent, to 387,454, as usual comprising about one-third of the industry total.

May was "no blockbuster," said Tom Webb, chief economist for the National Automobile Dealers Association. But he noted that the annual selling rate improved from 11.6 million units in April to 12.3 million in May. And that, said Webb, could signal "the beginning of a long-awaited, if gradual recovery for retail auto sales."

The sales figures were released amid some hopeful signs in the economy at large, in housing sales and housing starts for instance. But economic news was mixed and consumer confidence remained flat — slightly below April, in fact, and still well below pre-Gulf war numbers.

Japan-based manufacturers continued to gain market share by outperforming the industry as a whole. Their car-truck sales were off 5.7 percent for May and were down 8.8 percent for five months. Overall U.S. sales were down 15.9 percent for the five-month span.

TOP 10 SELLERS, MAY 1991

	Sales
1. Honda Accord	39,654
2. Chevrolet C/K pickups	38,176
3. Ford F-series pickups	36,695

Honda, Nissan and Toyota all reported single-digit declines for the month.

As a group, Japanese brands picked up 1.6 points of market share in May, grabbing 25.9 percent compared to 24.3 percent last year. Through May, their share rose 2.0 points to 25.3 percent.

Subaru continued to outrun most of the industry, with May sales up 7.9 percent to 7,690. But in May 1990, Subaru was down 30 percent from 1989.

The Big 3 were down more than the industry average in May, falling 12.6 percent. For five months, Big 3 sales were off 17.8 percent.

Chrysler Corp. sales plunged 15.5 percent in May. As they often do, Chrysler's light trucks and minivans outsold its cars. Sales for the Chrysler make were off 40 percent for the month.

Both American Honda Motor Co. Inc. (Honda-Acura) and Toyota Motor Sales U.S.A. Inc. (Toyota-Lexus) sold more cars than Chrysler Corp. in May. American Honda also leads Chrysler for the calendar year.

Ford Motor Co. sales were down 12.8 percent in May, despite a 14.6 percent increase by Mercury. General Motors was off 11.9 percent, but Buick sales rose 8.1 percent.

Nissan's new Vanette Serena will compete against Ford and Chrysler minivans in Europe.

Nissan unveils minivan for Japan, Europe

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Co. last week introduced a mid-engined eight-seat minivan that will be sold only in Japan and Europe.

The vehicle, named the Vanette Serena, was developed independently of the 3.0-liter V-6 Nissan Quest/Mercury Villager that Nissan will co-produce with Ford Motor Co. for the U.S. market. The front-wheel-drive Quest/Villager, which is virtually identical in size to Chrysler Corp.'s standard-sized minivan, will be built by Ford at Avon Lake, Ohio.

Smaller than the Quest and its targeted competition, the Toyota Estima/Previa, Serena's front axle is positioned 34 inches ahead of the engine to permit an extended wheelbase of 109.4 inches.

Nissan engineers say the unconventional layout provides handling that is on a par with a passenger car and flexible arrangement of the rear seats. The minivan is offered in a four- and five-door version.

The rear-wheel-drive Serena is available with three versions of a four-cylinder, 16-valve twin-cam gasoline engine, in 1.6- and 2-liter versions, and two diesel engines, including a turbocharged unit. Four-wheel drive and four-wheel steering are optional.

Nissan said it hopes to sell 4,500 units a month in Japan at prices ranging from 1.14 million yen (about $8,150) for a commercial version to 2.8 million yen ($20,000) for a top-line passenger model.

Although the new vehicle will not reach U.S. shores, it will compete head on with Ford and Chrysler in the key European market, where both U.S. automakers have hopes of cashing in on the fast-growing minivan segment.

Serena will be produced for the European market at Nissan Motor Iberica SA in Spain, starting in the summer of 1992, Nissan said. The automaker said it expects European sales to hit about 3,000 units a month shortly after launch.

Mercedes tightens control over sale of dealerships

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — In an effort to control the "haphazard" erosion of its dealership presence, Mercedes-Benz of North America Inc. will play a much more active role in monitoring the sale of Mercedes dealerships.

The company is giving itself more power to veto the sale of any of its 408 U.S. outlets. And it wants more say-so in reviewing potential buyers who want a franchise.

Mercedes may even buy stores in key markets.

The company is particularly keen to keep real estate developers from buying dealerships and using the properties for other purposes, said Michael Jackson, senior vice president of marketing and sales.

The plan, called the "Network Investment Program," serves as an acknowledgement that the dealer network needs shoring up.

Ralph Gaden, chairman of the Mercedes dealer council, said the council encouraged the company to come up with a program that would keep dealerships open and ensure that only high-quality dealers can acquire the franchise. Gaden owns Autohaus Inc. in Dallas.

He said it is in the dealers' best interest to raise the standards of the dealer network, because a dealer that "doesn't quite fit the image" reflects badly on the others and could affect the value of the franchise.

"I would much rather have a good strong competitor than a weak one, or what we call in the trade a 'schlock operator.' Not that we have many, because we don't. But if there's a good, solid qualified operator in my market, we both sell more cars and make more money," he said.

Mercedes has already set aside money to buy dealerships and expects to buy two or three a year.

"The alternative of letting events unfold haphazardly is something we can no longer afford," Jackson said. The Network Improvement Program is expected to be in place by the end of the year.

The changes come as Mercedes sales have fallen 22.9 percent so far this year, along with other luxury brands that have been hit hard by the recession and luxury tax.

In such tough times, dealers might be more inclined to sell to a real estate developer or simply quit and relinquish the franchise, and Mercedes wants to be prepared.

From a longer-term perspective, Mercedes feels its dealer network is spread thin geographically. That makes it important to keep open certain small dealerships in out-of-

Chrysler bond rating lowered again

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Citing the "rapid depletion" of Chrysler Corp.'s cash reserves, Standard & Poor's Corp. has downgraded the rating on $21 billion worth of Chrysler debt for the second time this year.

Standard & Poor's warned that further downgrades could occur unless the automotive market revives or Chrysler raises cash through asset sales.

In February, Standard & Poor's downgraded Chrysler's long-term debt to speculative, or junk bond, status, which restricts Chrysler's access to credit markets and raises borrowing costs.

Standard & Poor's last week said it had further lowered the senior debt ratings of Chrysler and its financial subsidiary, Chrysler Financial Corp., to BB− from BB+ ratings. The action moves Chrysler's rating deeper into the speculative grade.

Similarly lowered was the rating on the Auburn Hills Trust, a trust formed to sell bonds to finance the $1 billion Chrysler Technology Center under construction in Auburn Hills, Mich.

Standard & Poor's placed the ratings of Chrysler Financial Corp. and Chrysler Credit Canada Ltd. on its CreditWatch list "with developing implications." That means ratings could be raised or lowered. The ratings of Chrysler Corp. and Auburn Hills Trust were placed on CreditWatch "with negative implications."

"Persisting weak cash flow from operations heightens uncertainty about Chrysler's ability to continue funding critical new product development programs," said Standard & Poor's. "Moreover, CFC faces debt maturities over the next 18 months that could necessitate substantial asset sales."

Chrysler's cash dipped from $3.36 billion at the end of 1990 to $2.55 billion at the end of the first quarter of 1991.

The company could raise an estimated $500 million from the sale of assets now on the block.

Chrysler termed the rating "extremely disappointing" and said the timing was surprising.

"The overall economy appears to be on the rebound, and Chrysler's car and truck sales are finally beginning to show some signs of improvement," the company said.

"We remain confident that we have the financial resources necessary to continue to support our aggressive new product programs," Chrysler said, adding that the company believes "the worst is behind us and that brighter days are ahead."

SPORTS CAR MECCA

Thousands trek to Kentucky each year to pay homage at Corvette birthplace

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

BOWLING GREEN, Ky. — Religious pilgrims have their rocks and shrines. American car buffs have the Corvette factory here.

Despite its seemingly abandoned ambiance outside, the weedy parking lot, its rusty and battered fences and a human-less reception room where visitors have to figure out for themselves how to get into the inner sanctum, the Corvette factory is an automotive mecca.

Every year, some 50,000 Corvette lovers, sports-car clubs and sweaty tourists off the adjacent interstate make pilgrimages to the out-of-the-way factory, 70 miles north of Nashville, Tenn. The badges of Corvette fan clubs from Hawaii to Switzerland — there are some 635 around the world — adorn one plant wall. The factory is the seventh most visited tourist site in Kentucky, ranking behind such national treasures as Churchill Downs and Abraham Lincoln's birthplace.

It is, after all, the Corvette — 38 years old and "the only true American sports car," its disciples claim.

The Corvette is nothing if not an image-builder for General Motors. With its ZR-1 version carrying a base price of $64,138, the Corvette remains the most expensive mass-produced car in America. Its 375-hp V-8 is topped in the United States only by certain Ferrari and Lamborghini products. With first crack at much of the newest technology in GM's arsenal, it is arguably the most advanced

LATE NEWS

VW recalls 7,000 Corrados

TROY, Mich. — Volkswagen United States Inc. is recalling about 7,000 of its 1990 and 1991 Corrados to check fuel pumps for a possible defect.

VW said the fuel filter connected to the fuel pump assembly could deform, causing the fuel pump to come loose. That may cause the car to stall. The company noted that a number of the affected vehicles are still in dealers' inventories.

Sinclair leaves Saab USA Sept. 1; Helling to CEO, Halbach chairman

Saab Cars USA Inc. Chairman Robert Sinclair will retire Sept. 1, after 12 years as head of the company.

Sinclair, 59, said in a letter to dealers Friday that President Sten Helling will also become CEO. Hans Halbach, executive vice president at Saab Automobile AB in Sweden, will succeed Sinclair as Saab Cars USA's chairman. Halbach will remain based in Sweden.

Sinclair stepped back from day-to-day duties last July, when Helling became president and Sinclair was named to the new position of chairman.

Korea's Kia to assemble Mazda 929 next year

SEOUL, South Korea — Kia Motors Corp. said last week that it will begin assembling the Mazda Luce/929 from kits beginning in the spring of 1992.

Production plans call for starting with 2,000 units monthly, Kia said. The Luce, equipped with a 3.0-liter V-6, will compete against Daewoo Motor's Imperial and Hyundai Motor's Grandeur models.

Mazda Motor Corp. this month introduced its all-new replacement for the Luce/929, a longer and wider car that will be called the Sentia in Japan and the 929 in the United States. It was not immediately clear whether Kia will assemble the all-new car or the old Luce.

Kia is 8 percent owned by Mazda and 10 percent by Ford Motor Co.

Brazil allows 6.5% price hike

SAO PAULO, Brazil — Brazil's new economic team last week gave the country's automakers permission to raise passenger-car prices by an average 6.5 percent and rebated to the industry a part of the Industrialized Products Tax manufacturers pay every month.

The measure acts to give the automakers an infusion of working cash during the current wage and price freeze.

Nissan to build electric cars

Nissan Motor Co. Ltd. will manufacture an electric car starting in 1997.

The company said last week in Tokyo that in partnership with Kyushu Electric Power Co. of Tokyo it will begin commercial production in 1997.

The company did not say whether the vehicle would use the Super Quick Charge battery system it announced two weeks ago.

Nissan announced no specifics of the project, but reports in Japanese media late last week said the car will have a range of 120 miles at 25 mph on a single electrical charge.

2 GM vice presidents reassigned at C-P-C

WARREN, Mich. — General Motors vice presidents David D. Campbell and Arvin F. Mueller have been reassigned to give them control over product platforms at the Chevrolet-Pontiac-Canada Group.

Campbell, 61, who had been C-P-C group director of operations since 1984, now is general manager of rear-wheel-drive platforms. He is responsible for the Chevrolet Caprice sedan and wagon, Buick Roadmaster sedan and wagon and Oldsmobile Custom Cruiser wagon (B-body); Cadillac Brougham (D-body); Chevrolet Corvette (Y-body), and Chevrolet Camaro and Pontiac Firebird (F-body) platforms.

Mueller, 59, who had been C-P-C group director of engineering since 1988, now is general manager of mid-sized products. He is responsible for the Buick Century and Oldsmobile Cutlass Ciera (A-body); Buick Regal, Oldsmobile Cutlass Supreme, Pontiac Grand Prix and Chevrolet Lumina (W-body) platforms and the Chevrolet Lumina, Pontiac Trans Sport and Oldsmobile Silhouette minivans.

Fuji loses $620 million for year; U.S. Subaru units are in red

TOKYO — Fuji Heavy Industries, the maker of Subaru vehicles, reported a consolidated net loss of 86.9 billion yen (about $620 million at current exchange rates) for the fiscal year ended March 31 despite a 23.9 percent increase in sales, to 819 billion yen ($5.8 billion).

The company also reported that its consolidated operating loss widened to 79 billion yen ($564 million) from 38 billion yen the previous year. Consolidated results include the parent firm and subsidiaries.

Fuji said the parent company accounted for 66.4 billion yen of the net loss. Subaru of America and the company's joint manufacturing venture with Isuzu Motors Ltd. in Indiana accumulated the remaining 20 billion yen deficit, the company said.

Fuji said most of the loss occurred in the first half of the year. It attributed the loss to heavy depreciation costs, the high cost of selling in the United States and investment for new products in Japan.

Fuji said it expects to earn about 2 billion yen ($14.3 million) during the current fiscal year on an unconsolidated basis. But it indicated it would be difficult to finish in the black on its U.S. operations.

— Mary Ann Maskery

NADA's Green calls on makers, dealers to rethink ties

THE HAGUE, Netherlands — It is time for automobile dealers around the world to re-evaluate their relationships with manufacturers, according to Ray Green, immediate past president of the National Automobile Dealers Association.

In remarks to the New Vehicle Committee of the International Organization of Motor Trades, Green urged dealers and their national associations to meet with manufacturers to revise franchise agreements.

In a global economy, he said, dealers must be a part of the manufacturers' decision-making process in matters that affect the products they sell.

BRIEFLY: *Problems of the inner city outweigh Ford-Buick rivalry*

A **Buick** dealer helping a rival **Ford** store sell cars? Yes. And it happened in Detroit, where the Big 3 these days work together on projects like batteries and wiring harnesses to get an edge on foreign competition.

Nate Conyers, the only black Ford dealer in the Motor City, held a week-long party to celebrate the opening of his new retail truck center, and he invited various politicians, business people and media folk to sell cars for a day.

Last Monday was dealer day at Conyers' dealership, Riverside Ford, and pulling sales duty along with the many Michigan Ford dealers who attended was Prat Parekh, owner of Prat Buick.

Parekh sold an Escort and said he had a lot of fun doing so. "The inner city dealers face a far greater problem than most dealers who are in competition," Parekh said. "Since Nate and I are the only two minority dealers in Detroit, we work well with each other. This is not a Ford or Buick situation, it's a Detroit city program. We must work together to keep traffic in the city."

Parekh said it seems easier to sell Escorts than Buicks because Escorts are less expensive and appeal more to inner-city customers, the majority of whom are looking for entry level vehicles.

NISSAN TEES OFF: Employees at **Nissan** Research & Development Inc. will be tempted to break away for a *quick* game of golf when an $80 million technical headquarters opens in Farmington Hills, Mich., this fall. The complex, on land that was once a country club, will include a three-hole golf course.

PLANS UNDECIDED: Yoshira Kimbara, senior managing director of **Toyota Motor Corp.**, says the company has not decided what, if anything, it will do with 1,000 acres on which it holds options in suburban Detroit.

The automaker was to present plans to township officials April 24, but canceled the presentation without saying why. Speculation was the project included a test track and office and laboratory space.

"No decision has been made," said Kimbara, following a dedication ceremony of a $45 million parts and materials evaluation facility at Toyota's technical center in Ann Arbor, Mich., on June 6.

He said the company's "long-range plans" are being reviewed, including whether or not the Lyon Township property "can be used for product-development activities." He said a decision will be made by year's end.

Wild West scene hiked Toyota truck sales in Hollywood, Fla.

TUMBLEWEEDS IN FLORIDA? Toyota of Hollywood in Hollywood, Fla., took a cue from California's Tinsel Town to convey the excitement of owning a Toyota pickup truck. The dealership built a three-dimensional diorama featuring a pickup in an Arizona sunset. The display is complete with cactus, boulders, small animals and a male mannequin sporting Levis and a bandana. Customers were drawn to it like magnet. Protective glass had to be put up after the first day, a salesman said, because kids were jumping into the scenery.

SALES

FROM PAGE 3

Buick's gain pushed it 0.8 percent above last year's five-month total and made it the only Big 3 make that is up for the year.

European imports continued to struggle; their sales were down 28.6 percent for the month, probably due to the recession and the five-month-old luxury tax on cars over $30,000.

Jaguar, for example, sold only 525 cars in May, a 66.7 percent drop from the year-ago month. Porsche sold only 483, down 47 percent.

Saab stumbled in May, with sales off 9.4 percent. It was still one of the few makes whose five-month sales were up.

The mediocre May numbers were posted amid mixed signals from the U.S. economy. During the month, the government announced that consumer spending, for instance, dropped 0.1 percent in April, while personal incomes rose by the same amount.

In an unambiguous piece of good news, sales of new homes rose 1.2 percent in April, the third consecutive monthly increase.

The conflicting messages indicate anxiety about the economy, as reflected in the consunmer confidence survey compiled by The Conference Board. Analysts say there's a strong correlation between consumer confidence and auto sales.

The Conference Board reported that consumer confidence declined to an index of 74.2 in May from 79.4 in April. Last July, before Iraq's invasion of Kuwait, the index was 101.7.

The number of people who said they intend to buy an automobile within six months also declined, from 7.7 percent of all respondents in April to 6.5 percent in May, the lowest it has been since January.

"People are increasingly nervous about prevailing economic conditions, and they are less optimistic in their outlook for the future," the board said in its monthly report. The survey covers 5,000 households.

NHTSA downplays Saturn crash, says consumer group

The Consumer Federation of America says federal safety officials are "giving lip service" to consumers by clarifying information surrounding a government crash of a Saturn sedan.

In May, the National Highway Traffic Safety Administration released crash results that gave the Saturn SL2 a passenger head injury score of 1,018, worst among eight subcompacts. The car had a driver's score of 918, third highest. A score above 1,000 indicates that serious head injury is possible.

But NHTSA Administrator Jerry R. Curry later clarified the report, saying the results alone can be "misleading and demonstrate a failure to understand the safety standard compliance test results."

Jack Gillis, director of public relations for the consumer federation, said the clarification means NHTSA "is clearly more interested in protecting the car company than they are in providing the consumer with valuable information."

Saturn officials have said the test results are misleading because the dummy inside did not hit anything, making the 1,000 threshold on the index irrelevant.

other models.

"I think they realize how bad everyone has been hurting," said Art Clemmer, general manager at Axelrod Chrysler-Dodge in Wadsworth, Ohio. "Not making us order poor-selling models will really help us out this summer."

Oldsmobile will not warehouse any vehicles for "as-needed" orders from dealers this buildout season, limiting the number of vehicles available, according to Jerry Bessen, president of Courtesy Oldsmobile Inc. in Bronx, N.Y.

"Olds is not going to build cars and put them against the wall this year," he said. "If dealers don't order them now, Olds isn't going to build them."

The Automotive News Data Center projects that 1991 model year production of cars and light trucks in U.S. and Canadian factories will total 10.2 million units, a decline of 9.7 percent from 1990-model output of 11.3 million. Besides ordering fewer vehicles than last year, dealers are being more selective in what they do order.

"We are ordering only those models that have good track records with us," said Peter Griffin, president of Griffin Ford Inc. in Greenwich, Conn. "We spent a lot of time selecting colors, upholstery, equipment packages on every car order." Griffin said he has changed the way he orders cars because he still has half a dozen 1990 models.

Lynn Voss, sales manager for George Ballas Buick-Pontiac in Kansas City, Kan., said Buick cut back on build numbers this year, and he is afraid that he and other dealers "could be hurting for cars in July if things should pick up."

Pontiac and Buick also compensated their dealers $100 a car to offset some floorplan expense when Grand Ams and Skylarks were ordered early in the buildout period, according to Voss.

Despite the optimistic projections about the end of the recession coming from the White House and some analysts, many dealers, like Dave Towell, owner of Dave Towell Cadillac Inc. in Akron, Ohio, expect a tough summer.

"I'm not expecting the summer to take off in sales, and I don't think the manufacturers are expecting that to happen either, based on their production schedules," Towell said. "The intelligent dealer better be looking at the market and what he has done the first five months of the year and order based on the conservative sales pattern we have seen."

Jim Phelps, sales manager of Preston Ford in Preston, Md., said he, too, has been more selective in his orders this year. "We got hurt last year, ordering too heavy in certain lines, overloading ourselves, expecting better summer sales," he said. "We're going to avoid that this year."

Kyle Hobson, general manager at McKenney Chevrolet in Cherryville, N.C., said he is looking at a long, hot summer, but expects things to pick up by September with the 1992 models.

Sales of cars and light trucks in May were down 11.7 percent from last year, with domestic car sales dipping 10.2 percent and imported car sales plunging 16.2 percent.

Although factories and dealers don't like to admit that they have written off the 1991 model year, inventories and buildout orders certainly don't reflect any optimism. But there is a potential upside: The combination of lean 1991 model inventories and possibly fat cleanup rebates could set the stage for the 1992 models because there is unlikely to be a glut of 1991s to interfere with the launch.

General Motors and Ford Motor Co. dealers will get another break on 1991 inventories in the form of the 5 percent carryover allowance on vehicles left in stock when the 1992 model year begins. The GM payment covers all 1991 models; the Ford payment covers all except the 1991 Mercury Grand Marquis and Ford Crown Victoria and Explorer.

Jack Wells, general sales manager for Beach Lincoln-Mercury in Huntington Beach, Calif., believes there is an epidemic of conservatism among car dealers across the country. "I believe most dealers are going to grow at the rate the economy grows — if the economy grows slowly, so will car inventories."

Wendy Beale Needham, auto analyst at Smith Barney in New York, said, "There is no reason to produce a lot of cars now to make earnings look good. You can't — they look terrible."

Don Warnock, chairman of the Dodge National Dealer Council, is another who doesn't expect a summer upturn. "I don't foresee much of an uptick in market demand until 1992," he said.

PRACTICAL PASEO

Ads pitch 'smart buy' and sex appeal

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Toyota Motor Sales U.S.A. Inc. is seeking a larger chunk of the young men's market by touting its new 1992 Paseo as a practical car that appeals to the emotions.

Ren Rooney, Toyota corporate marketing manager, said the entry-level sporty coupe is practical because it is a quality car with a base price of $9,988, yet it delivers the fun and excitement that young men aged 18 to 29 want.

Toyota's entry level Tercel has a good young women's audience, he added.

Paseo is competing with other entry-level coupes such as Geo Storm, Hyundai Scoupe and Honda CRX.

"It makes a statement," said Rooney. "It's a car you want to be seen in, and at the same time it says 'I'm a smart buyer.' We feel Paseo will give us the extra edge in getting males into the showroom."

Advertising began last Wednesday on national television during the National Basketball Association finals. The ads also are appearing on spot television and cable television's MTV.

The two 30-second commercials parody the notion that some advertising is interspersed with subliminal messages.

One spot, entitled "Flashing Images," begins with a still shot of the car. While the first announcer explains that the Paseo is "a practical, sensible car/so don't expect a lot of excitement/just good basic transportation," a second, muted voice interjects phrases accompanied by a scene or word flashed across the screen.

With the phrase "women dig it," the flash scene is two sexy-looking women; with "let's party," the flash is a picture of a man in swimming trunks dancing with a bikini-clad woman.

The words wild, sexy and hot and a closeup of a man screaming also flash during the spot.

The spots end with the Toyota tagline, "I love what you do for me."

Print ads appear in *People, Sports Illustrated, GQ* and *Rolling Stone* magazines and car enthusiast publications.

The campaign is scheduled to run through August.

Luxury cars prop up Japan sales

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japanese car buyers continued to indulge themselves with high-powered luxury models in May, helping to prop up a market that remained weak overall, according to preliminary figures released last week.

In its monthly report, the Japan Automobile Dealers Association said sales of cars above 2 liters, the segment that includes most imports and cars like the hot-selling Mitsubishi Diamante, surged 39.2 percent in May, to 43,844 units.

But sales overall, excluding minicars, slipped 2.6 percent, to 432,377 units. Demand in the 660-cc-to-2.0-liter class, Japan's biggest segment, slid 10 percent.

Even sales of mini-vehicles (under 660 cc) slid 11 percent in May, to 145,614, the first decline in that segment in 14 months.

Minicar sales, which began taking off after the engine size for the vehicles was increased a year ago, have buoyed overall demand by bringing buyers into sales outlets. But the effect is fading, and the future of the segment is not good, analysts say.

"Growth in the mini sector is through for now, and the next 12 months could be difficult," said Steve Usher, who follows the industry for Kleinwort Benson International in Tokyo.

The overall decline in May continues what has been a downward trend since the beginning of the year, interrupted briefly by a slight increase in April.

Most manufacturers are forecasting an upturn for the second half of the year, when several new models are introduced. But the assumption receives a mixed response from analysts.

Keith Donaldson of Salomon Brothers says he is "beginning to think along those lines" and is becoming more optimistic about a possible recovery.

But Usher says the new models might do well without arousing new demand in the overall market. Usher says he sees "no reason for joy later this year."

Toyota Motor Corp., Nissan Motor Co. Ltd., Mazda Motor Corp., Isuzu Motors Ltd. and Daihatsu Motor Co. reported lower sales in May. Mitsubishi Motors Corp. again bucked the trend, reporting a 24.5 percent rise, to 34,368 units, on the strength of demand for its Diamante, Pajero and new RVR minivan. In contrast, the company's mini-car sales slid 22.3 percent, to 19,394.

Honda Motor Co. sales, largely pushed by demand for the end-of-cycle Civic, rose slightly last month. Honda said sales increased 2 percent, to 35,390.

Import sales fell again in May, the fifth consecutive monthly decline. Sales were off 4.3 percent, to 15,616 units, as demand for the segment-dominating German marques fell 8 percent, to 8,700.

General Motors sales were up 10.8 percent, to 759; Ford Motor Co. was off 28 percent, to 236, and Chrysler Corp. sales rose 17.5 percent, to 114.

Honda again was the biggest importer from the United States, reporting a 59.7 percent increase in sales, to 1,595.

Self-financing system hooks car dealers

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Dennis Murphy has two dealerships in New Port Riley, Fla.

He sells about 75 shiny new Lincolns and Mercurys and 65 used cars a month at his New Port Lincoln-Mercury store.

But next door, he has a different type of used-car business. Last month, he delivered 30 used cars that he financed with his own money.

Murphy, 42, is one of 23 new-car dealers around the country who have invested in a used-car dealership franchise operated by J.D. Byrider Systems Inc. of Marion, Ind. Dealers with a Byrider store sell used cars in the $3,000 to $6,000 range and finance the sales themselves.

Murphy says he could have sold 60 cars last month at his Byrider lot, but since he's a neophyte (he opened the store in April), he wants to be a bit cautious before putting too much of his money on the line.

"There's more business out there than I really expected," Murphy says. "It's almost the reverse of the retail market.

"In the new-car market, I'm advertising to get people in, but in the used (market), I'm turning people away."

The Byrider concept was put forth in 1989 by James DeVoe, president of DeVoe Cadillac-Chevrolet in Marion, Ind., who says that "banks and finance companies not buying deals is truly the problem in the car industry." DeVoe, 47, contends that at least 30 percent of the people who apply for vehicle loans each year are turned down.

Dennis Brown, chief operating officer of Byrider, says many of those credit rejects are people with steady jobs, who may have had credit difficulty in the past, or may be looking for a second car. "They have the ability to pay, but conventional lenders don't see it that way," Brown says.

Since 1986, DeVoe has conducted what he calls buy-here-pay-here seminars for 550 dealer organizations. In February, he addressed a standing-room-only crowd at the National Automobile Dealer Association convention.

> "We would put a mirror under their noses, and if it fogged up we would sell them a car. We're a lot smarter now."
>
> **Mark Maguire**
> Byrider franchiser

Jerry Smith, owner of Smith Volkswagen-Mitsubishi in Wilmington, Del., says, "Jim (DeVoe) has taken an old concept and brought it to a level of sophistication and professionalism."

Byrider services include how to purchase inventory, how to screen customers, computer equipment and twice-monthly consultant visits.

Smith opened his Byrider store last year, and his used-car sales increased from 300 in 1989 to 500 last year. He says at least 25 percent of his prospective customers are turned down by banks. "We hope to be able to convert these people to conventional financing, create an additional owner base for ourselves and create customer loyalty," Smith says.

Byrider dealers say profits are much higher than in the new-car business, but the risks are great as well.

Jim Maguire, a former Dodge dealer in Louisville, Ky., began financing his own cars in 1987 and opened a Byrider store in 1989. Maguire says he had to repossess 840 of the 2,400 used cars he financed from 1987 to 1989.

His son, Mark, said the biggest problem was selling to anyone who came along and not being able to collect the payments. "We would put a mirror under their noses, and if it fogged up we would sell them a car. We're a lot smarter now," Mark Maguire said.

Repossessions have declined from a third of all cars sold to about 15 percent.

Last month, the Maguires sold 119 cars, had gross payments of $260,000 and net profit of $80,000, said Jim Maguire. He said the company had 38 chargeoffs in May for a total of $68,000.

Chargeoffs are delinquent payments.

Maguire says overhead and chargeoffs generally amount to about 60 percent of gross sales. He says the company collected $1 million in payments last year and has $1.7 million on the books in receivables so far this year.

Maguire says he pays an average of $1,800 for a car, sells it for an average of $3,500 and tries to make an average profit of $2,200, with interest.

"I can take $1,800 and make $2,200, instead of spending $18,000 for a new car to make $2,200," he says. "My risk is a whole lot less."

Maguire says he pays Byrider Systems $37.50 a month for services, which he says helped turn his company around. "J.D. Byrider is quite sophisticated," he says.

Dealers pay $29,000 for a Byrider franchise, plus 3 percent of gross receipts and another 2 percent of gross receipts for advertising fees. Franchisees not only operate a lot but a separate finance company called Credit Now Acceptance Co.

Brown says franchisees need $250,000 to $1.25 million to open the standard-looking blue and white Byrider store and for initial cash to buy cars and operate the credit company.

Dealers buy vehicles through auctions; some of them are obtained through trade-ins.

Vehicles generally sell for $3,000 to $6,000 retail and are usually not older than 10 years. Customer payments range from $40 to $60 a week, but some pay semimonthly or monthly.

DeVoe opened a buy-here-pay-here lot next to his new-car dealership in 1979. Last year, he sold 1,300 new cars, 700 used cars through conventional lending and 650 used cars through his Byrider lot.

DeVoe says he "totally, absolutely" would have lost those 650 sales had it not been for his own finance company. "Banks and other finance companies are under a lot of stress," DeVoe says. Byrider "provides a new lending source."

Ford, imports beef up rebates; GM ends '90 payments

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

General Motors did not renew rebates on its 1990 models, but Ford Motor Co. and five imports added fuel to the fire with new and adjusted consumer and dealer incentives.

The imports are Honda, Suzuki, Saab, Mazda and Volvo.

It is unclear whether the GM divisions will reinstitute incentives on 1990 models, but many dealers don't mind because they have sold all those vehicles.

"I don't have any 1990s — I've been out for about 3½ months," said a Kentucky Oldsmobile dealer.

"We're all out of 1990s," said a Michigan Cadillac dealer.

Ford's new consumer rebate program applies to 1990 and 1991 models.

Consumer rebates on 1990s and 1991s are:

- $500 to $1,600 on **Ford** cars
- $500 to $1,000 on **Mercury** cars
- $500 to $1,500 on **Ford trucks.**

In lieu of rebates, consumers may choose cut-rate financing of 4.8 percent or 7.9 percent, determined by the model or region. The rates apply to 24-, 36- and 48-month contracts.

Some rebates vary by region:

- Thunderbird — Southeast and West, $600 or 7.9 percent financing; Great Lakes, Central and Northeast, $750 or 7.9 percent.
- Cougar — in the Southeast and West regions, $600 or 7.9 percent; for Great Lakes, Central and Northeast, $1,000 or 7.9 percent.
- Mustang — West and Southeast, $500 or 4.8 percent; Great Lakes, Central and Northeast, $500 or 7.9 percent.
- F-series pickups over 8,500 pounds gross vehicle weight — Central and West only, $1,000 or 7.9 percent.

The retail rebates are $1,500 on the 1991 Crown Victoria and $1,000 on the 1991 Grand Marquis.

Ford's program expires July 30.

American Honda Motor Co. Inc. added a $750 dealer rebate on the 1991 Accord wagon and extended the entire program until July 3.

Through Aug. 2, **American Suzuki Motor Corp.** is paying rebates to dealers on Swift cars and Sidekick sport-utilities.

Dealer cash on the 1990 and 1991 Swift ranges from $400 to 1,000. Sidekick payments are $1,000 on the 1990 and $300 to $1,000 on the 1991.

Saab-Scania of America Inc. discontinued its cut-rate leasing program on 1991 models in the 9000 series and adjusted the finance plan on the purchase of the vehicle.

Through July 31, Saab is offering 3.5 percent financing on all 9000 models for 24, 36 and 48 months with a down payment of 25 percent.

The previous program carried 4.35 percent and 5.35 percent financing with 20 percent down.

Mazda Motor of America Inc. is offering consumer rebates of $500 to $1,300 on 1991 trucks until Aug. 2. The truck rebates vary from region to region.

Also, Mazda is paying dealers $1,000 on sales of 1991 models in the 626 and MX-6 lines through July 2 and $800 on 1991 MPV minivans through Aug. 2.

Volvo Cars of North America dealers earn $1,500 on sales of 740 and 940-SE cars (1991 models) through June 30.

Special Correspondent Darrell Pressley contributed to this report.

TOYOTA

FROM PAGE 2

versing a trend toward lighter, more flexible units begun years ago, Jagawa says. Where a unit now stamps one door at a time, for example, the heavier equipment will turn out two, he explains.

But speed in the die-change process — a hallmark of Japanese manufacturing competitiveness — will not be sacrificed, Jagawa said. Because the heavy equipment will be shifted by automated cranes, die changes will still be accomplished within the company's standard of 20 minutes, he said.

Additionally, the stamping process itself will be simplified at Fukuoka, Jagawa said.

Where five years ago it typically required six steps to stamp a given part, Jagawa said, Toyota can now do it in four.

But at Fukuoka, the process will be reduced to three steps — besting Honda Motor Co.'s new world standard of 3½, Jagawa said.

The Toyota engineers also hope to increase efficiency by upgrading welding robots to higher speeds, and by looking for greater ways to save energy in painting.

Final assembly at Fukuoka will be 10 to 15 percent automated when production starts up in early 1993, a level that compares with Japan's current manufacturing standard of 5 percent, Jagawa said. After three to five years, Toyota hopes to raise that to 30 percent.

Fukuoka's engineers cannot design in a 30-percent level of automation from the beginning because the cost would be prohibitive with current technology, he explained. But in the near future, he said, Toyota expects the technology-to-cost ratio to improve, making a 30 percent level attainable.

To build one line with 30 percent automation based on current technology would cost about 10 billion yen (about $72 million), or about 50 million yen per worker replaced, he estimates.

"Even if the technology is feasible, the cost is too high," he said.

To be feasible, the cost has to be brought down to about 35 million yen per worker, which is what Toyota will spend when the plant starts up with 15 percent automation, he said.

Beyond relying on intensive automation, Fukuoka's assembly lines also will be shorter than normal in a bid to raise output and quality.

Instead of the usual five or six lines, with about 70 workers each, the new plant will have perhaps 14 lines of 30 workers each, Jagawa said. The segments will be connected by buffer zones, or turntable areas able to hold several cars before moving them from one line to the next.

The new system will make it easier for a worker to stop the line to fix a problem, Jagawa said, because a stoppage of several minutes will not affect the next line, which can be supplied with cars and components stocked in the buffer zone.

That will minimize the time the line is down and also improve quality because there will be an inspection at each line segment, Jagawa says.

Worker morale should also be improved because it will give individual workers more responsibility, Jagawa said. Each group of 30 will be responsible for one complete job, and good work can be more readily recognized and rewarded.

Toyota's engineers are not the only ones looking at the Fukuoka plant as an opportunity to explore fresh ideas.

The personnel division hopes to come up with a new system for the plant aimed at speedier promotions for workers.

Where a worker at Toyota City can expect to take 10 years to reach the level of assistant manager, a Fukuoka employee might attain the title in seven or eight years because the employee would be competing plantwide instead of companywide, a personnel specialist said.

Many of the ideas for improvements at Fukuoka have come directly from workers now on Toyota's production lines. One request they have is to work alongside women, Jagawa said.

Although women hold some auto plant jobs in subsidiary positions, none work on the line in Japan because of laws regulating women working on late night shifts. Most Japanese auto workers alternate between the day and night shift every other week, effectively excluding women from line work by putting them in conflict with convention and the law.

In Toyota company dormitories, for example, women face a 10 p.m. curfew.

But perhaps, Jagawa said, if the two-hour buffer between shifts that is usually used for overtime were eliminated, the second shift could be ended in time for women to qualify. If that is what it takes to attract young workers, he suggests, Toyota is ready to consider it.

FORD

FROM PAGE 2

culprit. "We are investigating the problem," Jelinek said. "We are trying to determine whether we need a special response beyond goodwill assistance."

The problem has been almost exclusively with the Tempo and Topaz models, Iny said.

Meantime, dealers were told to advise owners to keep a full tank of gas to help alleviate stalling.

Iny says it's not the goodwill program, but the administration of the program that is the problem. "How come goodwill only works in 35 percent of the cases?" Iny wants to know from Ford officials.

Iny says Ford has not been consistent in awarding warranty payments with the fuel pump situation.

For example, an owner of a 1988 Topaz with 10,680 miles got no assistance from Ford, but another 1988 Topaz owner with 46,200 miles got $129.19 Canadian (about $112.39 U.S.)

The average cost to fix the fuel pump is $342 Canadian (about $297.54 U.S.)

"Ford appears to have stopped notifying owners of warranty extensions and has abandoned its position as Canada's leader in customer service campaigns," Iny wrote. "We believe this policy will prove to be detrimental to Ford in the long run."

Iny is asking Ford to extend the warranty coverage on the fuel system to five years/80,000 kilometers, to notify all owners of record and to reimburse consumers who have paid for repairs.

Ford spokesman Jelinek says that O'Connor will respond to Iny's letter. "We are interested in maintaining a dialogue with George," Jelinek said. "We want him to be pleased with our response."

Court clears way for Audi runaway suit

By Helen Kahn
SENIOR CORRESPONDENT

Rhode Island's highest court has ruled that there is enough evidence for the driver of a 1978 Audi 5000 to proceed with her unintended acceleration suit.

The driver, Rose Ferro, said she remembers leaving her parents' home, driving about one-tenth of a mile at about 15 mph and then waking up in the hospital. One witness, a gas station worker, said he saw the car moving at an "excessive speed" and hit a tree.

The witness testified that as he came to the scene he noticed Ferro's foot was not on the gas pedal but the engine continued to race. Another witness who had not seen the accident said he heard the engine racing both before and after the impact. An expert witness stated the collision was caused by "one or more design defects" in the Audi.

Ferro also used as evidence a recall notice from Volkswagen of America Inc., which she received about a year after the June 1981 accident. It noted that an improperly placed floor mat might interfere with the gas pedal.

Ferro filed suit in June 1984. [illegible] mid-1989, VWoA moved for a verdict in its favor and in July 1989 the trial judge exonerated VWoA on grounds the expert's view was speculative and there was not enough evidence of unintended acceleration.

In her appeal, Ferro said that even without the expert's opinion, there was enough evidence from lay witnesses to deserve a trial. The Rhode Island court agreed, saying that the affidavits of the two nearby witnesses plus the recall notice was "sufficient to establish a genuine issue of a material fact" without examining the question about the expert witness opinion.

The National Highway Traffic Safety Administration closed its investigation of the Audi 5000 in 1989 without finding a defect that causes unintended acceleration.

New GM stock catches eye of fund managers

By Curtis Vosti
CRAIN NEWS SERVICE

Institutional investors are intrigued with General Motors' proposed special convertible preferred stock offering that is expected to raise $600 million.

The Preference Equity Redemption Cumulative Stock is awaiting clearance from the U.S. Securities and Exchange Commission. It would make available 16 million shares of a special GM stock that would pay a higher dividend than the common stock and could be converted one-for-one into shares of GM common stock three years from now. Those features would give investors downside protection

But upside potential is limited: The stock can be called by GM on 15 days' notice at any time before July 1, 1994.

"It's an interesting concept," said Michael McCowin, principal and portfolio manager at Harris Bankcorp. of Chicago, which owned 1.5 million shares of GM as of Dec. 31, according to SEC filings. "It's very much like common stock but with a buy-write strategy," he said, referring to the call feature. "Any corporate issuer who would consider preferred stock ought to consider it. It won't be very volatile."

The Teacher Retirement System of Texas will wait and see, according to George Reagan, acting chief executive officer. The system, which is valued at $23.7 billion, owned more than 2.1[illegible] million shares of GM common stock as of March 31.

"We're not pathfinders. We want to see how it trades," Reagan said. "We're a public pension fund; we're not in the business of breaking new ground."

GM announced the offering in May, three months after it cut its quarterly common stock dividend to 40 cents a share from 75 cents.

May output best of year, but trails '90

By Bob DeMayer
SPECIAL CORRESPONDENT

May car and truck production in the United States was the highest of any month this year, but the car total was the lowest for that month since 1982.

Car production was 513,853 in May, down 17.19 percent from the year-ago month. This was the lowest May total since 1982 when 499,242 cars were built.

Truck production last month was 343,310, down 15.81 percent from 407,765 last year.

Carmakers scheduled 113,533 units last week, 26.55 percent above the preceding holiday week but 21.98 percent below 1990.

Year-to-date, U.S. car production is 2,386,860, down 13.27 percent from 1990.

Truckmakers planned to build 83,354 units last week, 25.20 percent above the prior week but 12.10 percent below last year.

So far this year, 1,422,466 trucks have been assembled, 21.76 percent below 1990.

General Motors' Saturn car plant in Spring Hill, Tenn., will be down for model changeover from July 22 to Aug. 5.

GM scheduled one shift of overtime last Saturday at its No. 2 truck plant in Flint, Mich., and two shifts of overtime at its Lordstown, Ohio, and Wilmington, Del., car plants and Baltimore truck plant.

Chrysler's St. Louis (No. 2) minivan plant worked two shifts of overtime last Saturday.

CANADA: In May, car production was 113,441 units, up 8.08 percent from last year. This was the highest May since 1977 when 117,13[illegible] were assembled.

Last month, truck production was 82,708 units, down 3.83 percent from last year. This was the lowest May total since 80,443 in 1988.

Canadian car production was estimated at 28,511 units last week, up 8.75 percent from the prior week and up 13.13 percent from the year-ago week.

Truck production last week was estimated at 20,819 units, up 9.13 percent from the prior week and 6.71 percent above the 1990 week.

Year-to-date, truck production in Canada is down 12.40 percent.

Ford Motor Co. has scheduled daily overtime this week at its St. Thomas, Ontario, car plant.

GM scheduled one shift of overtime last Saturday at its Oshawa, Ontario, truck plant.

Orbital seeks 'front' to raise CAFE

Firm recruits groups to thwart Big 3

By David Barkholz
CRAIN NEWS SERVICE

Orbital Engine Co. USA has secretly enlisted environmentalists to "front" for it in fighting for tough, new fuel-economy standards.

Orbital, the American subsidiary of Australian Ralph Sarich's two-stroke engine company, is trying to keep the effort quiet so it doesn't alienate its key U.S. customers: Ford Motor Co. and General Motors.

A Washington consultant for Orbital is suggesting to environmentalists that the automakers have downplayed or misrepresented the advantages of Orbital technology in order to fight increases in corporate average fuel economy rules.

"Orbital has been politely warned off trumpeting its breakthrough by its licensees/clients Ford and GM," consultant Anthony Stout wrote in a memo to one influential environmentalist.

Stout's information has already been forwarded to the Sierra Club, Greenpeace and the Natural Resources Defense Council in New York.

The strategy could peril Orbital's standing with Ford and GM.

Crain's Detroit Business, a sister publication to *Automotive News*, learned of Orbital's efforts to shape congressional debate on fuel-economy standards by obtaining copies of memos written by Stout to Washington environmental consultant Roger Craver and to Orbital USA Chairman Kenneth Johnsen.

Stout works for Government Investment Management Corp., a Washington-based consulting firm. In one of the memos to Johnsen, he describes himself as "your government advisor."

Congress is debating whether to increase CAFE standards from the current 27.5 mpg.

Stout is recruiting environmentalists to push that average higher, arguing that Orbital's newest engine developments offer much higher fuel efficiency than current four-stroke engines.

But the Orbital engine has yet to undergo rigorous federal testing for fuel economy and emissions over a long period.

Support for radical increases in CAFE — especially a bill sponsored by Sen. Richard Bryan, D-Nev., has begun to run out of steam on Capitol Hill as the automakers

see ORBITAL, page 5

AUTOMOTIVE NEWS/JOE WILKINS

"It will take two to three months to crank up a big environmental group to 'discover' Orbital and then front for you. Their fronting is important to preserve your relationship with your customers."

— Orbital adviser Anthony Stout in a May 16 memo to Ken Johnsen (above), chairman of Orbital Engine Co. USA.

2-stroke maker has fan club in Washington

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Although it hasn't yet found an environmental group to "front" for it, Orbital Engine Co. USA has already gained support from consumer groups in Washington.

And environmentalists have hopes for two-stroke technology as the "silver bullet" that could allow automakers to meet much higher fuel economy standards without reducing the size of cars.

In April, Clarence Ditlow, director of the Ralph Nader-affiliated Center for Auto Safety, used Orbital in a well-publicized report on how fuel economy improvements of 40 percent can be achieved without sacrificing safety or auto size — a claim vigorously disputed by Orbital customers General Motors and Ford Motor Co.

Ditlow's report used a conservative estimate that a two-stroke engine would yield only a 2-3 percent improvement. He said Orbital met with environmentalists in Washington six months ago.

Orbital's claims to have developed a two-stroke that meets strict new emission regulations and also improves fuel economy by 30 percent is the kind of ammunition that U.S. Sen. Richard Bryan, D-Nev., could use to get his proposed 40

Questionnaire leads off minivan dumping battle

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

The first deadline in the minivan dumping case hits Tuesday when all nine Japanese importers have to return a 41-page questionnaire to the International Trade Commission in Washington. The document asks for detailed information about importation and sales of minivans, full-sized vans, station wagons and sport-utilities.

Toyoda, Kume deny dumping, Page 44

If the trade commission investigation reveals that the Japanese dumped minivans at unfairly low prices and that the Big 3 suffered because of it, tariffs could be imposed on minivan imports.

The Japanese companies seem to be clear on the seriousness of the charges and the political pressure involved, but they reject the premise of dumping petition.

"It's hard to make an argument that you're being injured when you've got 90 percent of the market," said Richard Recchia, chief operating officer of Mitsubishi Motor Sales of America Inc. "Secondly, the two vehicles that they're focusing on, the (Mazda) MPV and the Toyota (Previa), are higher priced than the domestics."

At Mazda, a group of Japanese and American executives huddled behind closed doors last week with attorneys peering over the document.

Mazda's official statement was

Corolla Sedan SE-G, a right-hand model Toyota will market in Japan.

Toyota shows restyled Corolla

Toyota Motor Corp. last week introduced a longer, wider and fully restyled Corolla series that will offer the industry's first production four-cylinder engine with 20 valves. Making 160 horsepower, the in-line 1.6-liter engine tops a range that includes 1.3- and 1.5-liter variants, and a 2-liter diesel.

The car will retail in Japan for between 898,000 yen and 2.2 million yen (about $6,415 to $15,765). It is expected to debut in September 1992 in the U.S. market, along with the redesigned Geo Prizm, the GM version based on the Corolla. Corolla and Prizm are expected to be built at the NUMMI plant in California.

The new Corolla sedan is larger than the current model. The car measures 170.8 inches in length, is 67.4 inches wide and 55.2 inches high. The wheelbase is stretched nearly three inches, to 98.6.

Asians restrain franchise gains after '80s binge

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — During the go-go 1980s, Asian makers were as aggressive adding dealers as they were introducing products. But now, like so many things that slowed with the turn of the decade, most Asian companies selling vehicles in the United States have scaled back on dealer expansion.

Hyundai's plans: Page 43
12 Japanese brands: Page 42

After increasing nearly 10 percent annually in the late 1980s, the number of Asian franchises grew only 4 percent last year. If early 1991 trends continue, that number will increase less than 2 percent this year.

A survey of the nine Japanese companies, their three luxury divisions and the one Korean carmaker

Bricklin ordered to pay $17 million to backers

By Charles M. Thomas and Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTERS

A federal judge has ordered Malcolm Bricklin to pay $17.3 million to a Maryland couple who invested $350,000 in a company founded by the flamboyant automobile entrepreneur that they believed would import the ill-fated Yugo as well as exotic Italian sports cars.

The multi-million dollar award against Bricklin for fraud and breach of contract in U.S. District Court for the Southern District of New York results largely from Bricklin's failure to defend himself after his attorney was disbarred for reasons not pertaining to this lawsuit.

Bricklin: plans appeal

Bricklin last Friday called the order a "joke," saying he would appeal the judge's ruling. He didn't defend himself, he says, because going to court in New York is too costly.

But lawyers for the plaintiffs said they will try to collect from Bricklin even though they are uncertain of his whereabouts.

Bricklin recently moved from his Meeker, Colo., ranch to Scottsdale, Ariz. A recording at his phone number gives a post office box for all correspondence, and records messages.

In 1983, John and Rebecca Bednarik invested in a venture led by Bricklin to import Italian sports cars — the Pininfarina Spider and Bertone — and recruit dealers to sell the vehicles.

According to the lawsuit, the venture also included plans to import and sell a lower-priced vehicle for the Bednariks to distribute.

But in 1985 Bricklin formed Yugo of America Inc. to distribute the Yugoslavian subcompact, leaving the Bednariks on the sidelines.

"The Bednariks' claims are false and have no merit," said Bricklin. "I chose not to defend myself against their blatant lies in New York and in the end they will get what they deserve — nothing."

He said mounting a defense in New York would cost a fortune in legal fees. "We will win on appeal," he said. "We didn't even defend ourselves because it would cost too much to win in New York."

Bricklin said the firm he started in 1983, International Automobile Importers Inc., did import Italian sports cars, which were distributed by the Bednariks, but that the Yugo was never part of that plan.

> "I chose not to defend myself against their blatant lies in New York and in the end they will get what they deserve — nothing."
>
> **Malcolm Bricklin**
> Auto entrepreneur

"We had never even heard of the Yugo in 1983," he said.

Still, the Bednariks say Bricklin financed negotiations to import Yugos with assets from International Automobile Importers, in which the Bednariks had invested.

The Yugos were initially successful and Bricklin paid himself royalties of more than $9 million for Yugos sold through dealers the Bednariks had recruited, according to their attorney, David U. Fierst from the Washington firm of Stein, Mitchell and Mezines.

Fierst contends the Bednariks had a five-year contract with Bricklin that he breached. Bricklin says the Bednariks breached it by failing to buy the agreed number of Italian cars.

The Bednariks sued, claiming that failure of International Automobile Importers to deposit required sums of money and import

Volvo goes front-wheel drive

Volvo Car Corp. last week took the wraps off its new 850-GLT in Europe, but the sedan will not be sold in the United States until the fall of 1992. Although the 850 bears a close family resemblance to its 940/960 big brothers, it is an all-new model below the skin. A front-wheel-drive layout permits more interior space than the 900 series despite shorter overall length. The 850-GLT incorporates several technological innovations including a new transversely mounted, 2.5-liter, 20-valve in-line five-cylinder engine. The light alloy, twin-cam engine is from the same family as the in-line six introduced last fall on the 960.

Ford of Europe stokes r&d fires

Halstead aims to recapture customers with faster model changes

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Ford of Europe, jarred by a Europe-wide loss of share last year and an 88 percent skid in profit, will pour $15 billion into new products and research and development by 1995 in a bid to woo back buyers with an upgraded model line.

Ford has four all-new models set to bow in Europe by the mid-1990s and will have new powertrains by that time, the fruits of a separate development program.

But many analysts say the new products are already late or dated, an assessment increasingly shared by senior management. At a meeting in Cologne, Germany, late last month, Ford of Europe Chairman Lindsey Halstead ordered his lieutenants to slash new-product development time to four years from five or more now, or face the prospect of falling even farther down the sales ladder.

To be sure, the automaker was hit hard last year by a severe recession, strikes and falling market share in its best market, the United Kingdom; a disappointing launch last fall of its top-volume Escort; and the continuing cash drain of its Jaguar unit, which Ford acquired for $2.5 billion in late 1989.

Sales slipped 3.1 percent, and the automaker surrendered its fourth-place share of market to archrival General Motors, although it has since recovered.

Net income slid to $145 million last year from $1.19 billion in 1989 as Ford's largest European unit, Ford of Britain, posted a pre-tax loss of £274 million pounds (about $443 million at current rates), its first deficit in almost 20 years.

And late last week, Ford Werke AG, the German unit, reported that its 1990 earnings fell 25 percent, to 270 million marks (about $152 million), despite a slight increase in revenue.

But analysts point out that even though Ford's sales and profits were hammered by special factors last year, the automaker historically has relied on long product cycles to sustain its profits. And that strategy has now come home to roost as consumers spurn its aging lineup for newer products elsewhere, they contend.

"The malaise goes deeper" than labor problems or Jaguar's losses, the London-based Automotive Research Unit says in a newly issued report. Rather, it says, Ford's problems stem from "a model range which is looking increasingly tired, at a time moreover when some of Ford's archrivals are looking fresh and exciting."

Beyond a doubt, Ford is playing product catch-up in Europe. At the Frankfurt auto show in September, it will unveil a station wagon version of the Scorpio — six years after the original five-door bodystyle was introduced. A four-door Scorpio sedan was not unveiled until last year.

Ford also was several years late with a notchback version of the Sierra. Worse, it has not responded to GM Europe's snappy Opel/Vauxhall Calibra coupe — even though its Capri once dominated the segment.

"Their cycle is out of kilter with their major competition," said an-

Correction

A story in the June 10 issue should have said the pickup proposed by Kelpie North America Holdings Ltd. would be built on a Kelpie-designed and engineered chassis, rather than on a Dodge Dakota chassis.

GM eliminates deductible on warranty

By Dale Jewett
AUTOMOTIVE NEWS STAFF REPORTER

General Motors upped the ante in the customer satisfaction game last week by eliminating the $100 deductible from its warranty coverage for all 1992 cars and light trucks.

The change puts GM on par with the large Japanese and European automakers, which have pursued a policy of comprehensive warranties with no deductibles.

There was no immediate rush by Ford Motor Co. and Chrysler Corp. to respond in kind, but a Ford spokesman said the company was studying the move.

The revised "Bumper to Bumper Plus" warranty will cover Chevrolet, Pontiac, Buick, Oldsmobile and GMC vehicles for three years or 36,000 miles, whichever occurs first. While the change eliminates the deductible, it also trims the mileage limit from 50,000 miles.

GM's six-year/100,000 mile corrosion and five-year emissions system warranties are unchanged.

In announcing the change, GM President Lloyd Reuss cited customer preference for no-deductible warranties offered by Saturn Corp. and Cadillac.

Saturn buyers are covered by a three-year/36,000-mile warranty. Cadillacs carry a four-year/50,000-mile warranty. The Allante luxury convertible carries a seven-year/100,000-mile warranty on major assemblies.

"Customers responded very favorably in surveys after Cadillac dropped its deductible in 1990," Reuss said.

Since 1989, GM's standard warranty coverage has been three years/50,000 miles, but customers were charged a $100 deductible on repairs after 12 months/12,000 miles.

Ford offers a 12-month/12,000-mile warranty with no deductible on all Fords and Mercurys, and a four-year/50,000-mile powertrain warranty. All Lincolns carry a four-year/50,000-mile warranty with no deductible.

In May, the Ford Dealer Council urged Ross Roberts, the division's new general manager, to adopt a three-year/36,000-mile warranty with no deductible for 1992 products. The council said the current warranty trails industry standards.

Chrysler spokesman Tom Jakobowski said the company is satisfied with its current warranty coverages, which are divided between vehicle warranties and powertrain warranties. The powertrain warranties have a $100 deductible.

Most domestically built Chrysler cars carry a 12-month/12,000-mile warranty; large luxury cars and the Town & Country minivan are covered by a five-year/50,000-mile warranty; captive imports have three-year/36,000-mile coverage.

The $100 deductible with Chrysler's seven-year/70,000-mile powertrain warranty applies only after the basic warranty expires, Jakobowski said.

"For us, the deductible has been a non-issue," Jakobowski said. "When you consider the cost of some engine and transmission repairs, customers don't mind the $100 compared to the full bill."

Car-truck sales post year's 1st 10-day gain

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

With General Motors leading the way, 10-day car and truck sales topped last year's for the first time in 1991. Every GM division posted a gain.

Industry sales of 311,015 domestic and imported cars and light trucks were up 3.5 percent. The increase was stronger for light trucks, which were up 6.9 percent. Cars rose 1.7 percent. There were eight selling days in the June 1-10 period, the same as last year.

Tom Webb, chief economist for the National Automobile Dealers Association, characterized early June sales as "very encouraging." He said increases by GM and Toyota "support anecdotal evidence from dealers that we have indeed reached a turning point and that a modest recovery is now under way."

GM sold 129,833 cars and light trucks for the period, an increase of 14.8 percent.

As has been typical of 1991's bright spots, though, stronger sales were in comparison to a weak 1990 period. Last year, GM's domestic car sales fell 29.1 percent from 1989.

Terrence P. Sullivan, GM's manager of sales reporting, expressed "cautious optimism" about the results, which he attributed in part to strong fleet sales. "We would have to see several of these 10-day periods strung together before we could make a serious evaluation of where and when the industry will break out of the sales slump," he said.

Ten-day sales for Buick rose 58.4 percent. Buick has consistently performed better than other domestic makes this year.

Ford Motor Co. sales slipped 3.3 percent and Chrysler Corp.'s were down 4.1 percent. *Automotive News* estimates 10-day sales for Chrysler and for most imports.

Sales were up 25.8 percent for Toyota Motor Sales U.S.A. Inc. (Toyota-Lexus). American Honda Motor Co. Inc. (Honda-Acura) reported a 10.5 percent decline.

Chrysler, Cummins widen turbodiesel use

By Joseph Bohn
TRUCK EDITOR

Chrysler Corp. will sign a new six-year contract this week with Cummins Engine Co. of Columbus, Ind., giving it exclusive rights to Cummins' B-series six-cylinder turbodiesel engine for Dodge pickups under 16,000 pounds gross vehicle weight.

As part of the contract that runs through 1997, Chrysler also is expected to get exclusive rights to the engine for its sport-utilities, though this was still being negotiated last week, according to Chrysler insiders.

The contract leaves the door open for Cummins to supply Ford Motor Co. in medium- and heavy-duty trucks, but protects Chrysler in the light-duty segments where it competes.

Dodge dealers have worried about losing one of their most successful products ever since Ford purchased a 10 percent interest in Cummins last July with an option to increase that to 20 percent.

Their fears were exacerbated recently when Chrysler explored alternatives to the Cummins engines. Chrysler officials held talks with, among other people, Roger Penske, chairman of Detroit Diesel Corp., who has been seeking to expand sales of the light-duty Phaser engine that the company distributes.

The new contract will allay such concerns and give Chrysler a predictable source of engines for, among other products, the new T-300 line of full-sized pickups due in the 1994 model year.

Chrysler sold 30,000 pickups with turbodiesel engines in the 1990 model year, and will sell about 44,000 in the 1991 model year, according to estimates made earlier this year by Troy Simonson, Chrysler's product planning manager.

Company insiders project 50,000 sales for the 1992 model year when the engine becomes available in extended-cab, as well as regular cab, models of the D-250, D-350, W-250 and W-350 series.

The company does not now plan to offer the diesel in sport-utilities. Its full-sized Ramcharger is basically an under-8,500-pound gvw vehicle, and Cummins is only certified for applications over that gvw limit.

But that could change. The company has been looking at trends in the diesel engine market, and one of them is General Motors' plan to offer its 6.5-liter turbodiesel in sport-utilities and vans during the 1993 to 1995 model years.

Ford will continue using the 7.3-liter diesel it has been buying from Navistar International Corp. Navistar has been working on an upgrade of that engine, with turbocharging, to meet the new emissions standards that took effect in January 1991.

The upgraded engine is expected to become available in Ford trucks by March or April, according to Ford sources.

Ford wants happy Explorer, Capri owners

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has extended to owners of Ford Explorer and Mercury Capri models a policy of paying up to $200 if they have service difficulties with their vehicles.

The cash payment policy had been restricted to Lincoln owners.

Owners of Explorer, Capri and Lincolns can get up to $200 to cover services such as car rentals or towing while their vehicles are out of service. Lincoln owners have had this benefit since September.

Says Al White, manager of Ford's owner relations operations department: "From a competition standpoint and what these owners pay and mean to us, the analogy is like travelers flying first class or coach on an airplane."

White says all Ford owners get good service, "but the level of service is a little different."

Explorer and Capri owners can get up to $200 to cover such expenses as a rental car or towing.

Explorer owners were added to the elite list because of strong sales and the fiery competition in the sport utility category. Through May 31, Ford had sold 99,288 Explorers, compared to 49,819 combined sales of the Explorer and its predecessor, the Bronco II to this point last year. The Explorer was introduced last April and is one of the top 10 selling vehicles in the United States for the calendar year through May.

White says the Australian-built convertible Capri has attracted a different type of customer. For the first five months of the year, L-M dealers sold 7,995 Capris.

When these owners call White's department via an 800 number, customer service representatives can approve the $200 on the spot.

White says $200 to keep a current customer happy is money well spent. "We're spending $2,000 on incentives just to get new people through the door," he said.

Toyota is tops in sales per dealer; Saturn, Honda share car honors

A substantial swing in Toyota's month-to-month fortunes propelled the No. 1 Japanese brand to a 10-unit lead in the *Automotive News* sales-per-dealer calculation for May.

The average Toyota dealer's May score of 78 units comprised 57 cars and 21 trucks. In April, when they sold 68 vehicles on average, Toyota dealers' total sales were half a percentage point worse than the overall automotive market compared to the year earlier, and in May they were 3.3 points ahead of average.

Honda and Saturn, neck-and-neck for the second straight month, sell only cars, and they lead that category at 68 each. Ford dealers sold more trucks per capita than anyone else, at 25 units.

Saab dealers, who sold at a torrid pace in March and April, fell back to a more normal level in May, the average dealer moving just five units, down from 12 a month earlier.

Metropolitan Motorcars in Marlow Heights, Md., was close to the Saab average for both months, selling four cars (all 900s) in May and nine in April. The store also sells Mercedes-Benz, Porsche, Audi and Subaru.

Saab "just about sold out their stock" during a two-month promotion of 2.5 percent financing on the 900 that ended after April, said general sales manager Rich Jensen. He predicted 900 buyers would be back when inventory becomes available. "Saab owners are loyal," he said. "They'll wait."

— William R. Diem

Import sales fall 16% in May, much steeper than U.S. dip

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Sales of imported cars fell 16.2 percent during May. That compares with a decline of 10.2 percent for domestic cars and 11.8 percent for domestics and imports combined.

Double-digit drops were more the rule than the exception. Hyundai's Excel sales fell 53.8 percent and its Sonata plunged 41.6 percent. Both the Audi 80 and 90 dropped more than 70 percent. The Jaguar XJ6 and XJ-S each fell more than 60 percent, as did the Volvo 700 series.

The Infiniti Q45 dropped 31.0 percent. And the M30, even with the addition of a convertible, fell 7.3 percent to 506 units. Dealers say they could sell more convertibles if they were available.

The Toyota Supra was down 48.0 percent, and the MR2 dipped 41.2 percent. After some strong months, the Nissan Stanza fell 35.1 percent.

In spite of the generally grim picture, there were some bright spots. A number of new models entered the marketplace and met with reasonable success, although sales will have to pick up if companies expect to reach stated goals.

Acura sold 1,301 of its new Vigor models, and Mitsubishi sold 1,668 Diamante sedans.

Honda's Accord was the country's best-selling nameplate in May with 39,654 sales, U.S.-built and imported. Like other Japanese companies that are putting more emphasis on U.S. production, Honda is selling more U.S.-built cars and fewer of the corresponding Japanese-built models. In May, 14.3 percent of the Accords sold were imported; a year ago, 31.7 percent were.

Nissan is doing the same with its Sentra. Domestic sales were up 37.6 percent; import sales fell 61.6 percent.

The Subaru Legacy is another example. Last year Subaru sold only 579 U.S.-built units in May out of total sales of 2,193. This year, 3,598 of the 4,703 Legacys sold were U.S.-built. Legacy sales were up 114.5 percent.

3 GM Lordstown workers face drug-dealing charges

LORDSTOWN, Ohio — An undercover narcotics investigation at the General Motors assembly complex here has resulted in the arrest of three workers.

Each pleaded innocent earlier this month during arraignment in Trumbull County Common Pleas Court.

Sheriff Richard Jakmas said the charges stemmed from undercover work that involved GM security personnel and the Lordstown police. Jakmas said the drugs included marijuana and cocaine.

Plant spokesman Robert Jones confirmed that the three arrested are GM employees.

Lordstown Police Chief William Catlin said the probe began with a call from plant administrators who suspected drug activity. Jakmas said evidence was obtained through recording devices, photography and observation of places "where the improper sale of drugs took place in the plant, on the premises."

May sales in Canada match 1990

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Light-vehicle sales in Canada in May were virtually the same as in the year-ago month. The total of 145,720 was down 173 units.

Car sales in May were 102,228, just above the 1990 total. Truck sales were 43,492, down 2.5 percent.

Mazda continued to notch hefty gains in both car and truck sales. Cars increased 35.2 percent over May 1990, and trucks were up 71.2 percent. For five months, Mazda sales were up 25.8 percent.

Other importers reporting sales gains for May included: BMW (6.0 percent), Honda (21.2 percent), Nissan (14.0 percent), Subaru (31.9 percent) and Suzuki (12.2 percent).

General Motors posted a 6.5 percent gain in car sales, countering a 1.6 percent drop in truck sales. That lifted GM's total sales 4.0 percent over May 1990.

Chrysler Corp. reported a 2.6 percent gain in truck sales while cars slipped 11.7 percent, leaving the company 6.0 percent behind the year-ago month. Ford Motor Co. reported double-digit drops for both cars and trucks, putting it 14.9 percent below May 1990.

Despite the bright spots, there is still widespread concern over the general softness of the market. Interest rates are falling, the economy is recovering and the market is awash in rebates and incentives. Yet five-month sales were down 4.1 percent from last year.

"We're not sure what they're waiting for," said a Ford spokesperson. "Incentives used to be used to get people off the dime; now, it's not working."

Staff Correspondent Alex Law in Toronto contributed to this report.

Car stockpile dips to 65 days; imports fatter

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

An upturn in May sales combined with lean production helped most manufacturers reduce inventories of unsold cars significantly.

The industry had a 65-day supply of cars on June 1, compared to 75 days a month earlier. The year-ago figure was 63 days.

Domestic manufacturers, including transplants, showed a 60-day supply, down from 68 on May 1 and 60 on June 1, 1990. Imports had an 82-day supply. That was down from 93 days on May 1, but it was higher than the year-ago import figure of 74 days.

Inventories fell as May car sales topped April by about 79,000. Meanwhile, U.S. car production was the lowest for May since 1982.

Chrysler Corp. had the heaviest days' supply of the Big 3 — 73 days vs. 65 days each for General Motors and Ford Motor Co.

Toyota Motor Sales U.S.A. Inc. had the leanest supply of any major manufacturer, at 32 days (U.S.-built and imported).

Nissan Motor Corp. in U.S.A. had the fattest inventory of the leading Japanese makers at 92 days. Its inventory of U.S.-built cars was 54 days, and its stockpile of import cars was 109 days.

Mitsubishi Motor Sales of America Inc. jumped to [illegible]-day supply from 29 a month earlier. Mitsubishi imports were stable at 97 days, but its inventory of U.S.-built cars grew to 102 days from 60.

Ceramics called diesel fuel saver

But MIT researchers find few benefits for gasoline engines

By A.S. Plotkin
SPECIAL CORRESPONDENT

CAMBRIDGE, Mass. — Research at Massachusetts Institute of Technology's Sloan Automotive Laboratory has concluded that the use of ceramic materials could lead to significant fuel savings in big diesel engines — but not in automotive gasoline engines.

Professor John B. Heywood, the lab's director, said that despite earlier optimism for use of ceramics in auto engines, "the benefits would not be big."

"I am not saying that ceramics are dead for such uses," Heywood said. "There are opportunities, but they would be piece by piece." He cited as possibilities the use of small ceramic components in the valvetrain and piston rings.

But the institute's work with ceramics led unexpectedly to discoveries in another area: lubrication.

"Our work emphasized that we did not understand very well the lubrication of pistons and rings inside the cylinders," said Heywood. "With ceramic diesels, the components would run several hundred degrees (Celsius) hotter."

The big push for research in thermal insulation with ceramics came about 10 years ago, he said.

The idea was that there would be less loss of energy to the walls of the cylinder and the cylinder head, that some of that energy could be converted to work and that efficiency would go up.

But Heywood said researchers found that gasoline-fueled engines developed severe engine knock.

"Also, if the walls get hot, you get less air into the cylinder, and the power level drops," he said.

Heywood said a better payoff is more likely with big diesels, which have turbochargers, "so you can counter the effect of the hot walls, by running the turbocharger at higher pressure."

David Hoult, a Sloan lab specialist in lubrication, worked on lubricating problems associated with ceramics engines, said Heywood.

"Dr. Hoult looked particularly at the critical area where the lubricant flowed between the piston rings and the cylinder linings," said Heywood.

"He measured how thick the lube film is between the liner and the rings and the piston. That developed in a major way — a laser-based optical system that gives a direct measurement of how thick the oil flow actually is. We can do that while the engine is running. And we now have a five-year program in this area."

Asian franchise plans for the '90s

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

A company-by-company look at franchise growth strategies:

Acura

Acura is looking to fill "some gaps in the map," says Ed Taylor, Acura Division's vice president of sales. With more than 600,000 Acuras on the road today and the total increasing, the division will need more dealers to handle increased parts and service business.

Taylor: filling in the gaps

Non-metro markets will get the bulk of Acura's attention. Although Taylor says the division is not planning to grow beyond its current 302 dealers immediately, Acura's staff is doing the groundwork now "to add dealers in 1992, on the assumption that the economy will have turned the corner."

Daihatsu

Daihatsu America Inc. is stuck in a Catch-22. The company has only two products, limited advertising resources, a 17,000-car import quota and little name recognition. It has 235 dealers in 22 states, and while it needs national distribution in order to make real sales gains, Daihatsu can't hope to expand without lifting other constraints on its business.

Brown: hopes for 750 dealers

Executive Vice President C.R. "Dick" Brown says he'd eventually like to have 750 dealers in all 50 states. More immediately, he wants to get 1992 products launched on time so that current dealers can begin to count on Daihatsu.

Honda

Honda has added an average of 20 dealers a year for the last 10 years but only three dealers so far in 1991, for a total of 977. According to Bob Rivers, the division's Western regional sales manager, Honda hopes to have "upward of 1,000 dealers."

"We feel adequately represented in every market," he says. "We're looking more at upgrading dealers and expanding facilities now."

Hyundai

See story on Page 43.

Infiniti

Infiniti plans to add 20 dealers this year and in each of the next four, says Bill Bruce, the division's general manager. Under that plan, Infiniti would have 160 dealers in 1994.

Bruce: goal is 160 by '94

Infiniti entered the market in 1989 with 50 dealers in 25 states and aimed to penetrate key metro markets in the first two years. Now, Infiniti will start moving into smaller markets with populations of 500,000 to 1 million, such as Memphis, Tenn.

Bruce would like to have Infiniti retailers in 34 states by Dec. 31. Decisions on a third tier of markets and dealers will be part of the next five-year plan.

Isuzu

A 16,800-car import quota restricted American Isuzu Motors Inc.'s plans during its early years in the market. The company countered by opening truck outlets, which helped spread Isuzu's name.

O'Connor: new showroom plan

From 1982 to 1985, Isuzu's only dealer growth came from adding truck dealers. The last of those truck-only dealers will be converted to full-line dealers this year, according to Jerry O'Connor, Isuzu's vice president of marketing and service.

Over the years, Isuzu has also moved from requiring free-standing separate showrooms for its full-line dealers to simply requiring separate showrooms. Now, it's accommodating dealers who must put more than one nameplate in a single showroom. Isuzu is working on an "environmental showroom" to help dealers create a distinct Isuzu look in a dualed situation.

Lexus

Lexus wants to have at least one dealer in every state 12 months from now, says J. Davis Illingworth, the division's general manager. Currently, Lexus dealers are in 39 states. The division wants to enter markets like Mobile, Ala., and Little Rock, Ark., while increasing its presence in key metro markets.

Illingworth: one for every state

Illingworth says he's more concerned with maintaining "a consistent look" to Lexus' dealerships instead of demanding exclusives.

While the official company line still rules out dualed showrooms, Illingworth concedes that exceptions have been made.

At the high-volume Westlake Auto Center in Westlake Village, Calif., for example, Lexus allowed a dual with Acura in order to sign the dealer and get freeway exposure.

Mazda

Mazda's most immediate concern is working with dealers to launch five new products effectively in the next 12 to 18 months. George McCabe, group vice president of operations at Mazda Motor of America Inc., admits that all the new products will stretch Mazda and its dealers.

McCabe: focus on new cars

McCabe says he'd like to "sell 500,000 units annually with 900 dealers in the next few years. Last year Mazda sold almost 350,000 with 876 dealers. "We have no master plan to expand," he says. "But we know we're light in some areas, especially where we're out-dealered by the competition, where we're losing market share or where there's significant population growth."

McCabe says Mazda needs more representation in Los Angeles, for example, where its bigger Japanese competitors have more dealers.

Mitsubishi

Mitsubishi Motor Sales of America Inc. had a big surge in the late 1980s as it prepared to absorb production from its U.S. assembly plant. But that growth has been slowed by the recession and as the company concentrates on moving the group upscale to sell such products as the Diamante.

The soft market is making it harder and harder for dealers to give the company the exclusivity that it has asked for. Mike Raumschuh, manager of dealer development, says Mitsubishi will continue to require separate sales areas but will relax certain rules that require dealers to have separate parts and service facilities.

Raumschuh says the company would like to add 40 dealers by the end of the year, mostly in metro markets. With the arrival of new products during the next several years, Mitsubishi will also have to decide whether to expand into much smaller markets.

A key part of Mitsubishi's arsenal is a franchise investment program in which the company actually controls a dealership, or at least the land, in order to ensure representation in key markets. The company will use the relatively new program more and more, according to Raumschuh.

Nissan

Nissan has no plans to increase its dealer count, says Jules Clavadetscher, the division's general sales manager. Instead, Nissan is working on a new "market representation program" that will help the company work with dealers to upgrade their facilities. Clavadetscher says Nissan is not concerned with having as many dealers as Toyota and "looks at each market on its own to decide if we need more representation."

While a number of dealers are involved in disputes with Nissan Motor Corp. in U.S.A. about Nissan's push for upgraded stores or its intention to add some points, Nissan insists that its primary concern is dealer profitability. New incentive programs and infrastructure changes are helping dealers make more money and get it faster. As an example, Nissan has started depositing incentive money directly into dealership bank accounts.

Subaru

Subaru of America Inc. says its 729 dealers are enough. Whether they're all the right type or in the right place is another question. Subaru's four-wheel drive prowess has given the company an almost cultish following in places like West Virginia, New England and Colorado. But Subaru needs to become stronger in other markets.

Wackman: happy with 729

"If we're going to be successful with the SVX (Subaru's slick new sports car), we're going to have to rely on dealers who haven't typically been big sellers," says Chris Wackman, vice president of marketing. He cites California as a perfect example. "The car is perfect for L.A., but we have to get the word out and help our dealers do that.

"We know we're not going to be anybody's primary franchise, but we need to get them to put some effort behind it. We still have some 'why not' dealers out there, dealers who took on the line because they figured it'd be easy enough to stick on their lot with another franchise. But we need more from them than that now."

Suzuki

As a small player in the United States, American Suzuki Motor Corp. is between that proverbial rock and a hard place. It tries to grow, but is hampered by a limited lineup and an overburdened production system. While it has gotten around tight import quotas by building Swifts in Canada, the company is at the mercy of its Japanese parent, which determines how to balance allocation between Suzuki and its partner, General Motors. In addition, all but five of its dealers share space with other brands.

Anderson: modest requests

In spite of that, Suzuki has added 15 dealers since the beginning of the year. National sales manager Gary Anderson says he hopes to continue to expand and cites the Northwest, Utah and some Eastern states as needs.

Anderson says he thinks dealers are approaching Suzuki because the company makes relatively modest requests in terms of capital or facility. In fact, all Suzuki asks is that a prospective dealer has room enough to display two Suzuki products in his showroom. In small markets, Suzuki will drop the requirement to one.

Toyota

Toyota calls itself "a 1,200-dealer operation," says Al Wagner, group vice president of sales. But the division actually has 1,181 dealers, down eight from the beginning of the year. Wagner admits that "the number changes every day" and that "there have been some dealers lost to the recession."

Wagner: lost eight this year

"Truthfully, we're where most of the market is right now," he says. Wagner says Toyota will add dealers to "accommodate population shifts in different regions and in areas where we suddenly need service support."

Wagner would like to see some dealers in better facilities. "But when business is difficult, it's not a good time for us to talk to dealers about expansion," he says.

Like other companies, Toyota has a dealer development program that gives financial help to select dealer candidates. In some instances, Toyota in effect becomes the dealer principal's partner.

Asian carmakers map dealer strategy
Dealer numbers and states served as of June 1991
Acura
302 in 44 states
Looking to fill in "gaps in the map."
Daihatsu
235 in 22 states
Dilemma: too few dealers, too few products and quota restraints.
Honda
977 in 50 states
"Second-generation" plan looks to upgrade, not expand, dealer body.
Hyundai
459 in 48 states
"Pushing hard" to get more dealers, especially in secondary markets.
Infiniti
89 in 30 states
Looking to add "20 a year," especially in markets with 500,000 to 1 million people.
Isuzu
594 in 50 states
Converting remaining truck-only dealers this year as part of modest growth and upgrade plan.
Lexus
123 in 39 states
Expects to have dealer in every state within 12 months.
Mazda
876 in 50 states
Focus is on new products more than on new dealers, although Mazda doesn't like being "out-dealered by Honda, Toyota and Nissan."
Mitsubishi
503 in 50 states
Looking to upgrade dealers and guarantee representation in key markets with franchise investment program.
Nissan
1,107 in 50 states
Will assess growth market by market.
Subaru
729 in 50 states
Knowing it's "not going to be a primary franchise," Subaru looks for new dealers and new commitment from old dealers.
Suzuki
305 in 48 states
Product availability holding back expansion.
Toyota
1,184 in 50 states
Growth possible in new population centers or where there's untapped service business.

**Expires Dec. 31 on Grand Wagoneer

FORD MOTOR CO.
(1990-91 models. Finance rates in lieu of rebates are 4.8 percent on Festiva, Escort (except Pony), Tracer; 7.9 percent on others. Terms are 24, 36 or 48 months. All incentives expire July 30.)

Ford Festiva, Escort Pony and LX, hatchbacks, Mustang	$500
Escort wagon, GT	$750
Tempo	$600
Thunderbird	$600-750
Taurus	$750
Taurus SHO	$1,600
Probe	$1,000
Crown Victoria (1991)	$1,500
F series, Econoline (1991)	$500
Ranger, Aerostar, F series (over 8,500 gvw)	$1,000
Econoline E150 (1990, with conversion pkg.)	$1,500
Econoline E150 (1991, with conversion pkg.)	$1,000
Bronco	$1,500
Mercury Tracer sedan	$500
Tracer LTS and wagon	$750
Topaz, Capri	$600
Cougar	$600-1,000
Sable	$750
Grand Marquis (1991)	$1,000

GENERAL MOTORS
All makes except Cadillac offer cut-rate financing in lieu of rebates. Unless otherwise noted, rebates expire July 7 on 1991 models.

Buick (1991)*	$250-2,000
Cadillac Brougham (1991)	$1,500
Chevrolet	
S Blazer (1991)	$1,000
Other 1991	$300-1,000
GMC	
Suburban (1991)**	$1,000
Other 1991	$500-1,000
Oldsmobile (1991)	
Regional incentives	$500-2,250
Pontiac Grand Am ('91)	$1,000

*Based on option package selected.
**Expires Sept. 25

HYUNDAI (expires July 2)

Excel (1990-91)	$500-1,000
Sonata (1990-91)	$1,000
Scoupe (1991)	$750

MAZDA (expires Aug. 2)

Trucks (1991)	300-1,300*

*Based on region

MITSUBISHI (1990-91 models; expires June 30)

California	
Base Galant	$500
Base Eclipse	$500
Base pickup	$650
Hawaii	
Mirage	$500
Eclipse, Galant, pickup	$750
Montero	$1,500

SAAB
3.5 percent financing on 9000 models (1991) for 24, 36 or 48 months with downpayment of 25 percent. Expires July 31.

SUBARU (1991, expires July 2)

Loyale	$500
Legacy L	$750
Legacy L Plus	$900-2,000
Legacy LS	$1,200-$1,400
Legacy LSi	$1,200-1,700
Legacy Spt. Sed.	$1,000
XT, XT6	$2,000

NEW PROGRAMS

FORD MOTOR CO. (expires July 31)
Ford Escort (1991), Crown Victoria (1990-91-92) and F-series pickup (1990-91)

100 percent of quota	$500-15,000
110 percent of quota	$750-22,500
120 percent of quota	$1,000-30,000

Dealerships divided into seven groups, based on number of units in quota. Payments listed above are the range of total amounts for the seven groups.

Program includes Mercury Tracer (1991) and Grand Marquis (1990-91-92) for Ford-Mercury dual dealerships.

TOYOTA (expires Aug. 2)

Corolla	$300-900, based on number sold
Camry, trucks	$300-1,100, based on number sold

CONTINUING PROGRAMS

CHRYSLER CORP.
Premier and Monaco programs expire Sept. 30; others expire June 30.

Dodge Spirit (1990-91)	$500
Monaco (1991)	$1,000-2,000 based on sales, plus $1,000 for each car ordered from factory
Monaco (1990)	$1,000-2,000, based on sales
Eagle Premier (1991)	$1,000-2,000 based on sales, plus $1,000 on each car ordered from factory
Premier (1990)	$1,000-2,000 based on sales
Jeep Grand Wagoneer (1990-91)	$3,500
Plymouth Acclaim (1990-91)	$500
Caravan, Voyager (no air bag) 1991	$500

GENERAL MOTORS

Chevrolet Corvette	$2,000

HONDA (expires July 3)

Civic 4-door (1991)	$400
Accord (1990)	$400
Accord (1991, except EX)	$400
Accord wagon (1991)	$750

HYUNDAI (1991, expires July 2)

Scoupe, Sonata	$100-300, based on sales

ISUZU (expires June 30)

1990-91 models	$800-2,000 based on sales

MAZDA (expires July 2 on cars, Aug. 2 on MPV)

626, MX-6 (1991)	$1,000
MPV (1991)	$800

MITSUBISHI* (1990-91 models; expires June 30)

Mirage	$250-1,200
Galant	$200-1,700
Eclipse	$200-1,700
Pickup	$200-1,500
Montero	$200-1,800

*Mitsubishi rebates differ by region. Some are flat payments, some are based on number sold; some are based on performance against quota.

NISSAN (1991, expires Aug. 2)

Sentra E, XE, GXE	$400
Stanza	$1,400
Maxima	$800-1,000, quota
240SX	$600-800, quota
300ZX	$1,500
Trucks	$1,200
Trucks (California only)	$1,300-1,500, quota
Pathfinder	$1,000-1,400, quota

PEUGEOT (1990, no expiration date) $2,000

SUZUKI (expires Aug. 2)

Swift (1990-91)	$400-1,000
Sidekick (1990)	$1,000
Sidekick (1991)	$300-1,000

VOLKSWAGEN

Golf, Jetta (1991, expires June 30)	$500, based on number sold
All cars (1990, no expiration date)	$500-1,500

VOLVO (expires June 30)

740 and 940-SE (1991)	$1,500

Ford revives dealer rebates

By Darrell Pressley
SPECIAL CORRESPONDENT

Ford Division has returned to dealer rebates with a program that pays up to $30,000 to outlets that sell 120 percent of their quota of Escort and Crown Victoria cars and F-series pickup trucks.

Toyota Motor Sales U.S.A. Inc. also has a dealer cash program. It applies to Corolla and Camry cars and to trucks.

Ford Motor Co. dropped dealer incentives April 8 in favor of an extensive program of customer rebates. Those payments were extended or sweetened June 5.

Ford Division's dealer rebates differ from the norm in that they involve a lump-sum payment rather than a per-vehicle payment. The program ends July 31.

Dealerships are divided into seven groups, based on the number of units in their quotas. There is no payment unless the dealership reaches 100 percent of its quota. Reaching 110 percent of quota brings a 50 percent bonus; reaching 120 percent brings a 100 percent bonus.

A dealership in the lowest quota group (12 units of less) can earn $500-$750-$1,000 for hitting 100-110-120 of quota. A dealership in the top segment (115 units or more) can get $15,000-$22,500-$30,000 for reaching 100-110-120 percent.

Vehicles in the program are the 1991 Escort, 1990 to 1992 Crown Victoria and 1990 to 1991 F-series pickups. For Ford-**Mercury** duals, the 1991 Tracer and the 1990 to 1992 Grand Marquis are included. This is the first rebate, either customer or dealer, on the 1992 Crown Victoria and Grand Marquis.

Toyota dealer bonuses are based on vehicles sold through Aug. 2. Dealers will receive $300 to $900 on Camry and Corolla models with an added $200 bonus on Camrys.

The rebates are $300 to $700 on pickup trucks, with a bonus $200 to $400 on base models. Payments are determined by the number of vehicles sold.

Japan's Big 3 lower U.S. forecasts

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japan's three biggest carmakers tentatively acknowledged last week that the cuts they made in U.S. exports during the Persian Gulf war are not going to be recouped anytime soon.

Toyota Motor Corp., Nissan Motor Co. and Honda Motor Co. cut U.S. shipments by a combined 70,000 units earlier this year in response to weak demand in the American market. At the time, the companies said they would maintain output and absorb the surplus in the home market.

Honda, the first Japanese carmaker to respond to the lower sales that accompanied the Gulf crisis, cut production by 20,000 units in Japan and 5,000 units in Ohio from January to March, but did not lower its original U.S. sales goal of approximately 900,000 units.

A Honda spokesman said last week that although conditions in the United States are improving, "it would be very difficult to achieve" its sales goal. Honda's U.S. sales through May were off 8.5 percent from a year earlier.

A spokesman for Nissan, which trimmed production by about 5,000 units in March, said the company now expects U.S. sales for the fiscal year ending in September to fall 70,000 short of its target of 670,000 units. The company said it does not now foresee a rebound in the American market until October at the latest.

A Toyota spokesman said last week that the automaker, which has reduced U.S.-bound production by 40,000 units through June, continues to take a "wait-and-see" approach to the U.S. market and that it has not revised its calendar 1991 forecast of 1.07 million sales.

According to Japanese press reports, however, company President Shoichiro Toyoda conceded that U.S. sales would fall about 70,000 short of target for the year. Toyota was off 9.1 percent through the first 10 days of June.

Luxury tax repeal has retroactive clause

By Diana T. Kurylko
and Jim Henry
AUTOMOTIVE NEWS STAFF REPORTERS

A bill that would repeal the federal luxury tax has been written in a way that would keep buyers from putting off purchases while waiting to see if the tax disappears.

Senate Minority Leader Robert Dole, R-Kan., introduced a bill that would repeal the tax on high-priced automobiles, boats, jewelry and furs. If it passes, it would be retroactive to June 11, the date of its introduction.

Dole was swayed at the last minute to make June 11 the enactment date instead of the customary date of signature by the president, said Robert McElwaine, executive director of the Federation Against Inequitable and Regressive Taxation.

"Auto dealers feared the entire year's luxury car sales would have been shot otherwise, because buyers would have put off purchases to see if the bill is passed," said McElwaine, former president of the American International Automobile Dealers Association.

The tax, which took effect Jan. 1, adds a 10 percent surcharge to the amount of a car's purchase price over $30,000. It has been widely blamed for a sharp drop in luxury car sales, particularly European models, this year.

But that view was challenged by an administration official.

"The tax has been in effect for less than six months, a period which coincided with the economic downturn," Kenneth W. Gideon, assistant secretary of the treasury for tax policy, told the Senate Finance subcommittee on taxation. "It is simply too early to assess what its actual impact will be."

Gideon said the administration was opposed to repeal of the tax on boats.

A companion bill in the House of Representatives was introduced on June 10 by Rep. Dick Armey, R-Texas, but his bill would not repeal the tax until enacted.

Meanwhile, two of the companies which feel they've been most hurt by the luxury tax, Jaguar Cars Inc. and Rolls-Royce Motor Cars Inc., have begun paying the luxury tax for their customers.

Through May, Jaguar's 1991 sales were down 56.4 percent. Rolls-Royce only reports sales figures once a year, but the company acknowledges its 1991 sales are down "more than 50 percent." Rolls-Royce previously averaged about 100 cars a month.

Jaguar had been paying the luxury tax on its XJ-S coupes and convertibles already, but as of June 1 the company expanded the offer to its XJ6 sedans as well. The offer lasts through July 31. If Jaguar had paid the luxury tax on all models sold in May, it would have cost the company at least $1 million.

The Rolls-Royce luxury tax offer began June 10 and runs through July 15. The luxury tax on the least expensive model in the lineup, the Bentley Eight, is $9,350, so assuming the company sold 50 of those last month, the offer would have cost the company at least $467,500. The luxury tax on the most expensive model, the Corniche convertible, is $19,590.

BRICKLIN

FROM PAGE 2

Bertones after October 1984 and Pininfarinas after February 1985 constituted a breach of contract.

Showing typical bravado, Bricklin took a cavalier attitude toward the Bednariks' lawsuit. The court noticed and observed in the ruling that Bricklin and his companies exercised bad faith conduct, which included concealing evidence and giving false testimony. It described Bricklin's action as a "classic pattern of tactically motivated obstruction."

As a result, sanctions of $39,479 against Bricklin and his disbarred lawyer were ordered and the judge dismissed Bricklin's $3 million suit against the Bednariks.

In 1988, Bricklin sold his share in Yugo America reportedly for $20 million, but sources say he received only a portion of that money.

Bricklin has had a series of automotive-related ventures. He founded Subaru of America in 1968. He launched his own carmaking company several years later to build a gull-winged sports car, but that venture ended in bankruptcy.

In recent years, Bricklin has tangled with the Internal Revenue Service and was mired in a myriad of lawsuits relative to his Colorado ranch.

Two years ago he planned to create the first national dealership chain comprising 1,000 points. But he failed to gain the support of manufacturers for the venture or the financing.

Earlier this year he announced yet another venture — a national chain of 50 used-car lots and remanufacturing centers to recondition the vehicles.

EUROPE

FROM PAGE 2

alyst Philip Wylie of Salomon Brothers in London. "But it's not just a matter of meeting the competition faster. If you cut a year off the cycle time you've cut a year off engineering costs."

The lack of a timely response to the red-hot Opel Vectra/Vauxhall Cavalier, introduced in the fall of 1988 — only seven years after its predecessor — has hurt most. The Sierra replacement is considered crucial, but industry observers say it already is two years too late.

Indeed, in a bid to get product to market as quickly and as cheaply as possible, Ford has moved to co-develop some of its new vehicles.

In a major venture that began taking shape last year, Ford and Volkswagen AG have agreed to build a new plant in Portugal to produce minivans for both brands.

A Ford spokesman confirmed last week that Portugal had agreed to pay one-third of the project's $2.6 billion cost. The agreement must now be approved by the European Commission, the executive arm of the European Community, to determine whether the subsidy violates EC rules.

The jointly owned facility, including stamping plant, will be located in Palmela, about 20 miles southeast of Lisbon, and will employ about 5,200. Production will begin in the summer of 1995, with an annual output of 170,000 units reached by 1996 and split 50-50 between the partners.

Detailed engineering work on the new minivan is scheduled to begin this summer, but the basic plan calls for a front-wheel-drive, high-roof vehicle with transverse-mounted engine and optional seat configurations for six to eight.

The Ford/VW minivans will share bodyshells, all sheet metal and glass components, but have different grilles, headlights and wheels. Each will install its own engines.

In a similar venture, Ford also has agreed to co-develop a new sport-utility with Nissan Motor Co. to compete with GM Europe's forthcoming Frontera rather than rebadge the 11-year-old Nissan Patrol. The new vehicle, to be produced in Spain, will be on the market in 1993.

In another example of an interim step the company has taken to fill product gaps in Europe, Ford of Germany last year began importing the U.S.-built Probe to take on GM's hot-selling Calibra. In the wake of tepid response to the car, the company no longer characterizes the car as its Calibra fighter.

The minivans will benefit heavily from Ford development work on the new mid-sized model that late next year or in early 1993 will replace the nine-year-old Sierra. The multi-billion-dollar project, dubbed CDW27 internally, also will replace the North American Tempo/Topaz.

The car represents the first example of Ford's Centers of Responsibility approach, which assigns development of specific product segments to different engineering units around the world.

The CDW27 program is on schedule and, according to a Ford of Germany official, "It is important to us that it stays on time."

Ford has decided to stick with the Sierra name in Europe and has opted for "evolutionary" styling changes in contrast to the revolutionary design of the 1982 Sierra. The U.S. version will have different front and rear treatments. But unlike the current Sierra, the new model will have fwd and transverse engine for more interior space.

The new Sierra, which has a longer wheelbase and shorter overhangs, will be offered as a four-door sedan, five-door hatch, four-door station wagon and a coupe that will become the new Capri.

Ford's Zeta four-cylinder engine range that debuts in the Escort this fall will be used. The new MTX75 transmission and a forthcoming, higher-torque continuously variable automatic transmission fitted to the Zeta also will be available on the Sierra replacement.

Output passes 4 million; trails '90 by 3 weeks

By Bob DeMayer
SPECIAL CORRESPONDENT

Total car and truck production in the United States surpassed four million units for the year last Friday. In 1990, the four-million mark was reached three weeks earlier.

Carmakers scheduled 119,703 automobiles last week, 7.75 percent above the preceding week but 17.16 percent below the year-ago week.

Year-to-date, U.S. car production is 2,510,709, down 13.42 percent from last year.

Truckmakers planned to build 80,856 trucks last week, 0.92 percent below the prior week and 14.76 percent below last year.

So far this year, 1,501,577 trucks have been assembled, 21.46 percent below last year's total at this time.

Automakers split last week's estimated production as follows: General Motors, 41.11 percent; Ford Motor Co., 25.11 percent; Chrysler Corp., 10.86 percent; Honda of America Manufacturing Inc., 7.09 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.59 percent; New United Motor Manufacturing Inc., 3.43 percent; Mazda Motor Manufacturing (USA) Corp., 3.07 percent; Diamond-Star Motors Corp., 2.51 percent; Nissan Motor Manufacturing Corp., 2.26 percent, and Subaru-Isuzu Automotive Inc., 0.97 percent.

GM scheduled two shifts of overtime last Saturday at its Pontiac, Mich., (West) truck plant and one shift of overtime at its Detroit truck assembly plant.

In addition, GM scheduled two shifts of overtime last Saturday at its Arlington, Texas; Fairfax, Kan.; and Wilmington, Del., car plants. Arlington produces the Cadillac Brougham and Chevrolet Caprice sedan. The Pontiac Grand Prix is made at Fairfax, and Wilmington produces the Chevrolet Corsica and Beretta.

Ford announced that its Michigan Truck (Wayne) plant will remain on one shift until June 24. The plant builds Ford Bronco and F-series light trucks.

CANADA: Canadian car production was estimated at 29,833 last week, up 3.20 percent from the prior week and up 17.53 percent from the year-ago week.

Truck production last week was estimated at 20,846, up 3.26 percent from the previous week but 1.35 percent below the year-ago week.

Year-to-date, truck production in Canada is 383,979, down 12.03 percent from the year-ago tally.

Feds turn up trade pressures on Japanese

Series of actions fans pro-U.S. fires

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The U.S. government struck three blows at Japan's carmakers last week, raising new trade pressure on the Japanese.

- The U.S. Customs Service confirmed that it is investigating whether Honda Motor Co. is dumping Canadian-made Civics into the United States and misreporting content information on the cars.

The not-yet-complete audit by Customs, a division of the U.S. Treasury, calculates that Honda's Civic hatchbacks contain fewer North American parts than Honda claims, a finding that could cost Honda up to $20 million in duty payments.

- Responding to a Big 3 request three weeks earlier, the U.S. International Trade Commission said it will initiate an anti-dumping investigation to determine whether Japanese manufacturers are selling minivans in this country at unfairly low prices.

The Big 3 charge is aimed chiefly at Toyota Motor Corp. and Mazda Motor Corp. and could eventually force prices higher on Japanese minivans through imposition of tariffs.

- The U.S. Treasury Department indicated that it would officially reject claims by CAMI Automotive Inc., a Canadian joint venture between Suzuki Motor Co. Ltd. and General Motors, that it is meeting the requirements of the U.S.-Canada Free Trade Agreement. Unless challenged by the Canadian government, that ruling would mean that most of the Suzuki cars and trucks coming into the United States will be slapped with new import tariffs, and that GM and Suzuki could be forced to pay millions in back tariffs on their CAMI cars.

Treasury's position on CAMI is expected to be stated in a draft ruling to be released this week.

Also last week, an influential industry group recommended that Congress initiate anti-dumping charges against the Japanese parts industry, saying that "Japanese dumping of auto parts is rampant."

The same group, the Auto Parts Advisory Committee, also asked Congress to begin preparing "Section 301" proceedings against Japan because of what it called the Japanese government's failure to "stop anti-competitive actions in auto parts trade." (See story on parts sales, Page 35.)

If carried out by Congress, a Section 301 action would label Japan an unfair trading partner and could severely restrict the sale of Japanese products in the United States.

Washington's moves against the Japanese auto industry follow mounting frustration

Mazda, Toyota deny dumping charges

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Mazda and Toyota defended themselves against dumping charges Friday, saying their minivans cost more than the competition and portraying themselves as Davids in a market dominated by Big 3 Goliaths.

In their first public response to accusations that they are dumping minivans in the U.S. market, the two companies noted that unlike their domestic competitors they have

New turbocharged Cedric Brougham VIP will be widely used as a taxi and company car in Japan.

Nissan plays it conservative with Cedric update

TOKYO — Nissan Motor Co. last week introduced its newly remodeled luxury entry, the Cedric-Gloria, with hopes of taking a commanding lead in what has become the strongest selling segment of the Japanese market.

But the throw-back look of the new model surprised observers, who had been expecting Nissan to use the Cedric-Gloria as a signpost to the company's next-generation styling direction. Instead, in an apparent nod to what is still a very conservative segment of the Japanese market, the new version clings to the 1970s lines of its predecessor.

The car, Nissan's top-of-the-line model before the launch of the Infiniti, is widely used as a taxi and company car in Japan.

At 191.2 inches long, a width of 69.8 inches and height of 55.6, the new Cedric/Gloria is larger overall than its predecessor. It will be priced at 1.9 million yen to 4.3 million yen (about $13,600 to $31,000) in Japan. Nissan said it expects to sell 12,000 units a month in Japan.

Orbital 'advisor' touts firm as hot investment

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

A Washington investment firm, which is trying to persuade Congress to raise fuel economy standards on behalf of Orbital Engine Co. USA, is promoting Orbital as a hot financial opportunity.

Orbital is involved in a web of governmental and financial activities that might be aimed at making the two-stroke engine developer a more appealing investment. The company acknowledges it is looking at financial markets.

Orbital "is the hottest property since the birth control pill," claims a written statement submitted to *Automotive News* last week by Government Investment Management Corp.

Memos from Government Investment Management President Anthony Stout to Orbital Chairman Ken Johnsen and to an influential Washington environmentalist show that Stout has been trying to enlist environmental groups to scuttle any compromise on raising fuel economy standards.

Automotive News and its sister publication, *Crain's Detroit Business*, disclosed last week that Stout is Orbital's self-described "government advisor." The memos to Johnsen show that Stout has been trying to line up environmental groups to "front" for Orbital to persuade Congress to raise corporate average fuel economy standards substantially.

The campaign was being conducted quietly so Orbital wouldn't upset its two main North American customers, General Motors and Ford Motor Co., which hold licenses for Orbital technology and which oppose increases in CAFE. Last week, GM and Ford declined comment on the campaign to use Orbital as an argument for a much higher CAFE.

Meanwhile, both Orbital and Stout's firm say Orbital is not paying Stout. Orbital President William Kaska said he knows Stout, but that Stout is acting on his own. The companies have refused to discuss their relationship.

White's exit fuels Iacocca rumors

Chrysler VP's retirement may signal coming end of Iacocca era

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Glenn E. White's decision to retire from Chrysler Corp. by year end is fueling speculation within the company that Chairman Lee Iacocca is considering reducing his day-to-day role in the corporation.

The company confirmed last week that White, vice president of personnel, administration and development, will retire by the end of 1991. He will be 65 on Aug. 21.

White has served as a valued adviser and counselor to Iacocca over the years and is one of less-than-a-handful of executives within Chrysler to have abundant access to the chairman. That group has dwindled in recent months.

White has abundant access to Iacocca

White's impending retirement will leave only corporate planning vice president Thomas G. Denomme remaining in the unofficial role of "cabinet" member advisor to Iacocca, according to one well-placed company source.

Iacocca, who will turn 67 Oct. 15, has never made clear his own plans for retirement. Under an agreement reached with the company's board of directors last June, Iacocca agreed to remain chairman indefinitely beyond the expiration of his present contract on Dec. 31, 1991.

Iacocca has suggested that he might consider a reduced role in the corporation but has not delin-

Green sweep

The high costs of meeting existing federal, state and local environmental regulations can cost dealers hundreds of thousands of dollars, and have forced many dealers out of the body shop business. Story on Page 3.

Adam Opel posts record profit

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Adam Opel AG, the German-based core operation of General Motors Europe, last week reported record profit, revenue and production for 1990.

The company said net income increased 18.1 percent, to 1.327 billion marks (about $740 million at current exchange rates) on a 13.9 percent increase in revenue, to 23.7 billion marks ($13.2 billion).

Louis Hughes, chairman and managing director, said the results marked the "best business year ever in the company's history."

Opel's biggest gains were made in the western German market, where it increased penetration to 17.1 percent from 16.1 percent in 1989.

In the new eastern federal states, Opel achieved a market-leading share of 21.1 percent, giving it a combined German penetration of 17.4 percent.

Registrations for Opel and GM's Vauxhall Motors unit in the United Kingdom increased 5.4 percent last year, to 1.55 million units, giving GM a European-wide market share of 11.6 percent.

Opel last year built 1,048,772 vehicles at its plants in Germany and Antwerp, Belgium.

Hughes said Opel will invest 1.3 billion marks ($726 million) in 1991, mostly for product development and more capacity.

A new plant in Eisenach in Eastern Germany will open in late 1992. Capacity will be 150,000 units annually.

JAVIER MENDOZA

Chairman Kenji Shimizu leads a team of Japanese executives trying to revive American Suzuki in the U.S. market.

Suzuki happy to play second fiddle

Importer still trying for comeback, 3 years after Samurai crisis

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

BREA, Calif. — Three years ago, what executives refer to soberly as "the crisis" or "the situation" hit American Suzuki Motor Co.

Consumer Reports charged that Suzuki's Samurai was prone to roll over. Despite denials, a model crisis control campaign and a "no-defect" finding by the U.S. government, the event crippled Suzuki. Sales dropped 75.4 percent between 1987 and 1990, to just 20,504 last year.

But like a patient that has a brush with death but lives to tell about it, Suzuki has emerged sobered and more focused.

The company is positioning itself to prospective dealers as an accommodating partner and a profitable supplementary franchise that is relatively inexpensive. Rather than deny its second-fiddle status, Suzuki embraces it.

"We're young and small, and we don't feel we can require facilities right now. We're not planning to change that in the near future," says Gary Anderson, Suzuki's national sales manager and marketing director.

Anderson stresses that the strategy shift has not lessened Suzuki's commitment to North America. Since the Samurai episode, Suzuki has opened a joint-venture assembly plant in Canada, introduced the two-door and four-door Sidekick sport-utilities and the Swift sedans and hatchbacks, expanded dealer advertising and incentives and enlarged the dealer body.

As a result, "American Suzuki is a substantially different company than it was five years ago," says Executive Vice President Yoshi Fujii, who replaced the company's highest ranking American, Doug Mazza, after he resigned in September 1989.

"We are not trying to return to

New environmental rules will hit dealers in wallet, cast cloud over body shops

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

When Alvah Bohannon built a new dealership in 1988, he didn't think twice about whether to put in a body shop. Body shops are only marginally profitable for most dealers, and the cost of meeting EPA regulations plus the associated high-tech bump equipment he needed simply cost too much.

A dealer's $25,400 tab, Page 22

A complete paint and body shop could cost a dealer upwards of $600,000. Paint booths run $60,000 each, and a big volume dealer may need four of them.

"It wasn't a hard decision to make once I started pricing things," said Bohannon, owner of Altavista Motors in Altavista, Va. "Putting in a paint booth that met all of the federal requirements, regulations on paint thinners and the cost of insurance just didn't justify the investment."

The high costs of meeting existing federal, state and local environmental regulations can cost dealers hundreds of thousands of dollars, and have forced many thousands of dealers out of the body shop business. Pending regulations will cost dealers even more when they are finalized.

According to the National Automobile Dealers Association, only 55 percent of the dealerships had body shops in 1990, down from 70 percent in 1972.

"Regulatory requirements established by the EPA and Occupational Safety and Health Administration are making it tough for body shops to be profitable," said Rolf Ruehring, NADA executive

FIRING LINE: *Ford reps field customer queries; comments improve future products*

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Jena Carsella, a 25-year-old graduate of the University of Southern Colorado, was tickled pink when she was hired by Ford Motor Co. last July to work in the owner relations department.

It's an entry-level job in Ford's Parts and Service Division. Carsella and 200 other employees handle inquiries from Ford's 41 million car and truck owners. But Carsella, and others like her, each handle 45 to 50 calls a day, and even when at home sleeping, Carsella sometimes has the customer foremost on her mind.

"During the middle of the night, I've answered my phone, 'Ford customer service,' " Carsella says.

The efforts of Carsella and her colleagues already have resulted in some Ford product improvements.

Because of customer comments, seat belts will be more flexible and comfortable in all 1992 Ford Motor Co. vehicles.

Standard air bags on all cars and better gas mileage on trucks are the next steps that Ford customers want the No. 2 automaker to take.

Al White, manager of owner relations, says his department met formally for the first time with Ford engineers in January to give them feedback on customer comments, and that led to the improved seat belts on 1992 models.

The next formal session will be next month when air bags, gas mileage and other issues will be presented to Ford engineers.

White says Ford "stole" the engineering feedback system from Toyota. "Toyota does that well, feeding back to the engineering community," he says.

AUTOMOTIVE NEWS/JOE WILKENS

Many of the questions Ford customer service representative Dee Snyder fields are warranty related.

But White says that in 1991 "nobody in the auto industry has been identified as first in class when it comes to customer satisfaction. If we can focus on quality and give the dealer more leeway," Ford can get to that point, White says.

White says he looks to Toyota and Chevrolet as good benchmarks in the auto industry and the Ritz-Carlton Hotels and General Electric Co. as excellent examples outside the industry.

Ford began consolidating its customer relations department from the field offices to downtown Detroit in 1987 and completed the process in March 1990. The number of employees has grown from 147 in 1987 to 200 now.

Of the 200 employees, 120, like Carsella, handle the phones. The rest answer letters or are in management positions.

White says it may be the only department, other than engineering, that is not feeling the $3 billion budget cutback that Ford Chairman Harold Poling has decreed by the end of the year.

Customer relations employees typically are recent college graduates who must work the phones before they are allowed to work in Ford Parts and Service field offices across the country.

Carsella says that "as a stepping stone, there's no better place you can learn" about the company.

The starting pay is good, and the ambiance is first-rate. Employees work out of relatively large cubicles, each with a view of the Detroit River and the skylines of Detroit and Windsor, Ontario.

"It's just beautiful to look out and see outside," Carsella says. "It's aesthetically very beautiful around here."

General Electric advised Ford to keep the environment bright and beautiful if it wants sane employees by the end of the day.

Carsella and her colleagues work from 8:30 a.m. to 5 p.m. and each fields 45 to 50 calls a day, calls that aren't all pleasant.

Craig Stacey, 23, had a husband and wife on the phone at the same time June 17, complaining about rust on their 1988 Ford product.

"Some days you get beat up, but other days are better," Stacey says.

The expiration date for Jaguar Cars Inc.'s luxury tax rebate was incorrectly reported in the June 17 issue. The offer expires Aug. 31.

Strong German sales save Western Europe from dive in May

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — New-car sales in Western Europe declined fractionally in May, although volume for the first five months of 1991 was about even with 1990.

The booming German market continued to buoy the rest of Europe in May. Sales in Germany, including the five new states, surged 42.5 percent to 408,000 units for the month, according to industry estimates compiled by *Automotive News*.

But sales in Europe's other major markets — France, Italy, the United Kingdom and Spain — declined in May.

Germany accounted for precisely one-third of all Western European new-car sales during the month, up 10 percentage points from May 1990.

Outside Germany, European sales fell 14 percent.

But most analysts, citing a 7.5 percent increase in income taxes which takes effect next month and higher fuel taxes, expect a slowdown in German demand during the second half.

January-May sales in the 17 surveyed countries totaled 6,145,200, just over 10,000 units above the previous year.

Sales in May fell 0.5 percent to 1,218,500.

The recession-mired British market continued to plunge, diving 31 percent to 120,200 sales in May. For the five months, volume in the United Kingdom was off 23.8 percent, to 703,500 units.

Sales in France fell 21 percent in May, to 155,000 units, and were off 17.1 percent for the first five months, to 859,500.

Italian sales declined 2.2 percent in May, to 216,180, and were off 3 percent, to 1,119,800, for the five months.

Sales in Spain, Europe's fifth largest market, were down 16.5 percent, to 78,300, in May and were off 18.7 percent, to 366,500, for five months.

Volkswagen Group, including the VW, Audi and Seat brands, again ranked first in European sales through the first five months at 1,023,500 cars. That represented a 10.5 percent increase over 1990 and was equal to 16.7 percent of the 17-nation market.

Volkswagen also registered the largest gain during May, with an 8.5 percent rise, to 206,300. For the year to date, VW surpassed General Motors as Europe's biggest gainer.

Volkswagen has received a major boost from the German market, where it enjoyed a leading 28.1 percent share on a 51.1 percent sales increase during the first five months of the year.

All of VW's sales gain in Europe during 1991 has been achieved in Germany. In Western Europe outside the home market, VW Group sales were down 15 percent, to 493,000.

Second-place Fiat Group, including the Fiat, Alfa Romeo and Lancia brands, declined 12.1 percent during May, to 156,500 units. For five months, the automaker's sales were down 11.5 percent, to 826,600.

Two years ago, Fiat ran neck and neck with Volkswagen for the European market lead, but in recent months the company has been outsold by VW, Ford of Europe and GM Europe.

Much of Fiat's decline can be traced to plummeting sales in its home market of Italy, where its share slid to 46 percent in May from 54 percent a year ago. Sales fell 21 percent in May, to 99,100 units.

Japanese makers have not kept pace with the growth in the German market; their combined share has fallen well below the accustomed 15 percent so far this year. Japanese share there was 12.8 percent in the first five months.

For all of Western Europe, Japanese volume increased 6 percent, to 725,500 units, for five months, an 11.8 percent market share.

AUTOMOTIVE NEWS / MARTHA GRATTAN

Chrysler 'family' adds members to discount roll

HIGHLAND PARK, Mich. — As part of its continuing efforts to deplete inventories of 1991 models, Chrysler Corp. has redefined the American family.

More family members can buy any 1991 Chrysler Corp. car or truck under the company's expanded employee/retiree purchase plan. And Mitsubishi products badged as Chrysler Corp. vehicles are included in the program.

In a letter to employees and retirees, Chrysler Corp. President Robert Lutz said the program is being expanded to include "sons, daughters, parents, parents-in-law, brothers, sisters, stepbrothers/sisters, half brothers/sisters, even brothers-in-law and sisters-in-law."

"The program includes just about everybody," Lutz added.

The former plan included only immediate family members of employees and retirees.

The new program runs until the end of the 1991 model year.

Buyers purchase the vehicle at the dealer's net wholesale cost and are eligible for consumer rebates or special financing.

The dealer price for the vehicle is the factory invoice price minus the 3 percent holdback and minus the dealer advertising contribution.

Buyers are limited to three vehicles per model year.

Chrysler last week also announced a $500 rebate on new cars purchased by U.S. military personnel and spouses from June 18 through Sept. 30.

The rebate is in addition to other national consumer incentive programs and applies to all 1990, 1991 and 1992 Chrysler Corp. vehicles, except 1990 Dodge Omni/Plymouth Horizon models.

Poland reported to favor GM as partner for ailing FSO

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — General Motors last week was reported to have won the upper hand in talks to co-produce passenger cars in Poland with the state-owned automaker FSO.

Italy's Fiat Group and France's Automobiles Citroen also are vying to set up ties with Warsaw-based FSO, but a Polish government spokesman quoted by the official news agency PAP said the GM proposal is favored.

GM's proposal, which is dependent on Polish government guarantees, would in effect rescue the financially troubled FSO, or Fabryka Samochodow Osobowych. Reportedly, GM could acquire a majority interest in the Polish firm.

According to reports, GM offered to invest up to $400 million in FSO by 1996, including $100 million to begin production of the forthcoming Opel Astra lower-medium-class model by 1993. The additional $300 million would be spent to start production of the Opel Vectra compact.

John F. Smith, vice president for planning at GM Europe, met last week with Polish Prime Minister Jan Krzysztof and other officials. The news agency said talks will continue this summer.

Although GM officials did not deny the report, they moved quickly to emphasize the tentative nature of the talks.

"We've made some proposals that we feel are good for our business partners and good for us," said a GM Europe spokesman. "But we are not in a bidding war. We are by no means certain that a deal will come to fruition."

The spokesman also stressed that no agreement is likely to be reached for several months.

Fiat reportedly is offering to produce its Tipo subcompact at FSO, while Citroen wants to build the new ZX model there. Citroen, a unit of Peugeot Group, has just signed a contact to deliver 10,000 1.9-liter diesel engines to FSO.

The FSO plant, which employs 11,000 workers, currently produces Fiat 125-based passenger cars under license.

Under the GM proposal, new lines would be installed at FSO to assemble the Astra from imported components.

Company officials have in the past envisioned assembly of about 15,000 units annually.

A GM spokesman said it was too early to say if local production would be exported to the West. He said GM's principal interest in producing in Poland would be to establish a local market presence.

Elsewhere in Eastern Europe, GM is preparing to produce autos and major components in eastern Germany and Hungary.

Florida lemon tally finds Hyundai had most, VW had none

By Helen Kahn
SENIOR CORRESPONDENT

Hyundai fared worst and Volkswagen scored best in Florida's 1990 lemon index.

The scale is based on 230 cases that were decided in consumers' favor under Florida's Lemon Law Arbitration Program. It compares the number of lemon awards to the Florida market share of each make that sold more than 4,000 units.

In Hyundai's case, 18 owners, or 7.8 percent of the 230 cases, prevailed in arbitration. But Hyundai sales accounted for less than 1 percent of the market, giving Hyundai a score of 10.45 on the index.

Subaru (3.12) and BMW (2.86) were the only other makes that had twice as many lemons as would be expected with their market share. The General Motors makes, Honda/Acura, Toyota/Lexus and Mitsubishi had fewer. And Volkswagen/Audi had none.

The report notes that manufacturers can avoid generating lemons by prevailing in arbitration, entering into prehearing settlements or taking other measures to prevent cases from being submitted to arbitration.

Attorney General Robert A. Butterworth's report says: "In both 1989 and 1990, BMW, Chrysler, Ford and Mercedes-Benz generated more than their expected share of lemons. Conversely, General Motors, Honda and Toyota were the only three manufacturers in 1989 and 1990 to generate fewer lemons than their expected share."

1990 FLA. LEMON INDEX

Expected index score, based on registrations, would be 1.00.

Maker	Index
Hyundai	10.45
Subaru	3.12
BMW	2.86
Chrysler	1.71
Mercedes-Benz	1.67
Isuzu	1.58
Volvo	1.47
Nissan	1.43
Ford	1.01
Mazda	1.00
Mitsubishi	0.68
Toyota	0.57
Honda	0.53
General Motors	0.37
Volkswagen	0.00

The annual report on Florida's lemon law — one of the toughest in the nation — says that consumers received more than $11 million in awards and settlements for their "lemons" last year, compared to $2.9 million recovered by consumers in 1989.

In 1990, the second year of the state-run arbitration program, 726 cases were approved for arbitration compared with 206 in 1989. Of those 726 cases, 302 were settled by manufacturers before arbitration and 346 went to arbitration. Consumers won 230 of those; 116 were dismissed.

Of the remaining 78 cases, 36 were withdrawn, 41 were settled for less value than provided by the lemon law, and one was pending at the time of the report.

In 1990 prehearing settlements with vehicle makers, consumers recovered more than $6 million.

Last year, 41.6 percent of consumers received full relief under the lemon law — either a refund or a replacement vehicle. That was up from 27.2 percent over 1989.

The marked increase in the number of requests for arbitration led the state to open a regional office in Tampa, add two arbitration boards and appoint 12 additional arbitrators.

FTC sues over display of Buyers Guides

The Federal Trade Commission has taken Tasca Lincoln-Mercury and its president, Robert Tasca, to court for alleged violations of the commission's used-car rule.

The suit, filed in federal court by the Justice Department for FTC, charges the Seekonk, Mass., dealer with failing to display Buyers Guides on used cars for sale and with failing to disclose all specified data on the guides. FTC asks for a permanent injunction and monetary civil penalties.

Tasca concedes that some cars on his lot did not have stickers. But he said he didn't own them all, and they were not all for sale. They included employee cars, cars left for service, and cars that had been bought back from Ford Motor Credit Co., he said.

Now, Tasca said, all such cars are parked in one area with a sign that notes they are not for sale.

Tasca said he is trying to settle with the FTC. The commission is seeking a $60,000 penalty, he said.

The window sticker advises buyers of warranty coverage and other essential information that becomes part of the sales contract.

Tasca said the FTC inspected his dealership at the request of the Rhode Island attorney general. There were no customer complaints, Tasca said.

— Helen Kahn

K mart pays $475,000 for selling faulty signals

K mart Corp. has sent a check for $475,000 to the National Highway Traffic Safety Administration to settle a 1985 lawsuit. This is the largest civil penalty ever collected by the safety agency for noncompliance with a safety standard.

The dispute involves K mart's sale of dual-purpose turn signals and hazard warning flashers. The retailer first bought them in October 1980 from Taiwan's Gen-Star.

But K mart made no tests before imports began and received no certificate of compliance from Gen-Star. Two years later, NHTSA tested the devices and said they didn't meet federal standards.

NHTSA told K mart in May 1983 that it must warn customers and bring the flashers into compliance.

Gen-Star issued a certificate of compliance for all flashers imported after January 1983.

But on July 14 of that year, NHTSA found non-complying flashers for sale. Less than a week later, K mart issued the first of several orders to its stores to pull the items. Later that summer, NHTSA asked K mart for a recall, and K mart complied. But the company ordered new tests because it was suspicious of NHTSA's test.

In March 1984, Detroit Testing Laboratory said the flashers failed both performance and durability tests. Eighteen months later, NHTSA took K mart to court because of the failure of the flashers and K mart's apparent unwillingness to comply with further directives. K mart said it should be exempt from any penalties because it thought it was in compliance and had exercised due care. A hearing was held in April 1988.

The Maryland federal district court now has ruled K mart did not exercise due care. The court added that the six-month delay in notifying customers was not within a reasonable time.

The court noted it has been eight years since NHTSA told K mart to stop selling the flashers and although there is some dispute about when the last flashers were removed from the stores, it has been "at least five to six years."

The court dismissed NHTSA's request for an injunction, partly because K mart no longer sells the flashers. But it did set the civil penalties.

May orders rise; sales numbers disguise market demand

By Joseph Bohn
TRUCK EDITOR

The heavy-truck market continued to improve in May, with new-vehicle orders skyrocketing and Class 8 inventory at its lowest level in nearly eight years.

Retail sales of 8,250 Class 8 trucks in May, 27.3 percent below a year ago according to the Motor Vehicle Manufacturers Association, don't reflect real market demand yet. Industry sales typically lag new-vehicle orders by two to three months, since it takes that long to produce trucks to customer specification.

And net new orders for heavy trucks climbed to 12,559 in May, compared to 9,530 in April and 11,869 a year ago, according to the New York-based investment firm Rothschild Inc.

May 1990 was a particularly strong month for orders since the market was on an upswing prior to getting shot down by the situation in the Persian Gulf in August.

Orders last month were the strongest in the past year, according to Frank Prezelski, an analyst with Rothschild Inc.

Some of last month's order strength is due to prebuying by truck operators to avoid a 4 percent price hike announced by heavy-truck manufacturers on their 1992 products.

Typically, makers such as Ford Motor Co. begin building new-model heavy trucks in July or August.

Ford's Louisville, Ky., heavy-truck operations, for example, were down the past two weeks for an early vacation. They resume production on 1991 models today and will continue to produce 1991s until the end of July, according to spokeswoman Bonnie Daws.

Ford begins 1992-model production at Louisville July 29.

Officials at some major manufacturers, such as Navistar International Corp., Freightliner Corp. and Volvo GM Heavy Truck Corp., still express some nervousness about June because of the prebuying factor in May's order rate.

Truck manufacturing officials noted that the increase in orders was broadly based, coming from all industry groups and not just from fleet buyers.

It is still difficult to determine how much of the 4 percent increase will stick, since sales transactions in heavy trucks are heavily subject to negotiation.

Prezelski said that even without the prebuying, net new orders would have been above 10,000, a level that is still strong.

Class 8 truck inventories, totaling 14,854 at the end of May, were at their lowest level since October 1983, Prezelski pointed out.

This created a very low 1.8-month inventory-to-sales ratio on June 1, he said.

It means that if market demand continues to pick up, dealers won't have enough trucks to satisfy it. And factories will be building trucks not just to fill orders, but to rebuild inventories which they have maintained at cautiously low levels this year.

Industry officials had generally been looking for U.S. Class 8 retail sales of about 100,000 units in calendar 1991. The recent upturn indicates the sales could well reach 105,000 to 110,000 units, which means manufacturers could be building 1,000 trucks a month in the latter of part of 1991.

As previously reported, most have increased production recently by canceling planned downtime or increasing line speeds.

Industry teams for low-emissions diesel

SAN ANTONIO — Southwest Research Institute has launched an international cooperative industry research program to develop a low-emissions diesel engine that will go beyond U.S. regulations mandated for 1994 to meet those anticipated for 2000.

The Clean Heavy-Duty Diesel Engine program has goals for emissions not to exceed 2 grams of oxides of nitrogen, 0.1 gram of particulates and 0.5 gram of hydrocarbons per horsepower hour.

By comparison, the current standard calls for 5 grams of nitrogen of oxides, 0.25 gram of particulates and 1.3 grams of hydrocarbons per horsepower hour.

Engine efficiency of 45 percent is another program goal, although that is not an anticipated regulation. Current diesel engine efficiency is about 42 percent.

American engine manufacturers participating include Caterpillar Co. of Peoria, Ill.; John Deere in Waterloo, Iowa; Detroit Diesel Corp. in Taylor, Mich., and Navistar International Corp. in Melrose Park, Ill. Foreign participants include Hino Motors Ltd., Isuzu Motors Ltd., Mitsubishi Motors Corp. and Nissan Diesel Motor Co. Ltd. of Japan and Volvo Truck of Sweden.

A proposal to open program membership to component manufacturers is being considered, according to Program Manager Syed Shahed of Southwest Research Institute's Engine, Fuel and Vehicle Research Division.

The program will provide participating companies with key clean diesel technologies selected by a committee composed of industry representatives and Southwest's senior technical staff members.

The advisory committee will meet quarterly. The program runs to 1995. The program's plan includes projects on intake charge expansion cooling or turbo-cooling, combustion system optimization, exhaust gas recirculation, reduction of oil consumption and oil-derived particulates, diesel spray jet development and mixing, and in-cylinder diagnostics.

The advisory committee can modify, add or delete projects within the overall scope and budget of the program. Cost of participation in the program is $65,000 the first year.

BRIEFS

Truck boom predicted

ENGLEWOOD CLIFFS, N.J. — The Heavy Duty Truck Committee of the Automotive Market Research Council predicts a two-year boom in sales of Class 8 trucks.

The consensus forecast for Class 8 North American factory sales in 1991 is 114,900 vehicles, down nearly 14.5 percent from 1990. But after bottoming out in 1991, sales are expected to jump more than 40 percent in the next two years to exceed 164,000 in 1993.

In addition to an economic recovery, the boom will be fueled largely by additional costs associated with stricter emissions standards that take effect in 1994 and are expected to generate strong pre-buying in 1993.

Another dip in sales is predicted for 1994, with another rebound, to 160,000 units, in 1996.

The Automotive Market Research Council expects North American factory sales of 139,000 Class 4-7 trucks in 1991, down 6.9 percent from 1990. The stricter emissions standards in 1994 are not expected to have as great an impact. By 1996, sales are projected to exceed 180,000 units.

Safeway inks fleet deal

BARRINGTON, Ill. — Safeway Inc. of Oakland, Calif., signed a long-term agreement with Idealease Inc. to manage Safeway's fleet of nearly 1,000 vehicles under a new Quality Assurance Program.

Idealease will control the running costs of Safeway's fleet through its dealer network and will provide the centralized services of billing, communications and purchasing from its headquarters.

It also will handle all supplier activity, including previous programs set up with Navistar International Corp. and Cummins Engine Co. in Peoria, Ill.

Fruehauf offers ABS

DETROIT — Fruehauf Trailer Corp. is making an anti-lock braking system available as a regular production option on all its truck-trailer models.

The axle-control design ABS will carry Fruehauf's Pro-Par name and will be produced by Bendix Heavy Vehicle Systems Group.

It will be available for vans, refrigerated trailers, platforms, tanks and dump trailers, according to Frank J. Miller, Fruehauf vice president of reliability, engineering and quality assurance.

The system is designed for either single- or tandem-axle control, is compatible with current seven-pin connector wiring systems and has self-contained diagnostics for on-vehicle troubleshooting.

Fruehauf and Bendix also are jointly developing in-axle anti-lock sensor capabilities for 1993.

Truck tilt studied

ANN ARBOR, Mich. — The propensity of tractor trailer rigs to tilt at precarious angles has involved the University of Michigan Transportation Research Institute in a project that is likely to affect truck operators in the near future.

As part of the Surface Transportation Assistance Act of 1991, expected to become effective Oct. 1, the trucking industry is expected to win nationwide approval for heavier and longer vehicles, including triple-trailer combinations. Triples are now legal in 17 states.

In anticipation, the National Highway Traffic Safety Administration awarded a nine-month grant to to devise minimum standards that every truck or fleet will have to pass for the heavier or longer combinations.

Using the university's commercial truck-tilt table, researchers are tipping fully loaded tractor trailers until they begin to fall to determine the exact point of rollover.

The tests being developed also will predict a truck's rearward amplification, the tendency of the last trailer in a double or triple to whip back and forth when the driver shifts lanes or makes a turn.

Japanese feel U.S. heat, promise to buy more parts

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Under increasing political heat, Japanese automakers plan to increase substantially their purchases of U.S.-made parts and materials.

Although the numbers are in dispute, U.S. industry sources say the increase could double Japanese sales for U.S. parts manufacturers — meaning as much as $10 billion annually in additional business by the late 1990s.

Based on Japanese industry figures, such an increase would push Japanese purchases from U.S. automotive firms from about $9 billion this year to nearly $20 billion later in this decade.

Those numbers include purchases for Japanese transplant factories in the United States, parts exported to Japan and components bought from Japanese suppliers with U.S. factories.

The plans emerged from private meetings in Las Vegas this month among top officials of Japan's 11 vehicle manufacturers and senior executives of 83 U.S. suppliers.

Japanese and U.S. industry groups arranged the meetings for the second straight year. More than 300 U.S. executives and about 180 Japanese executives attended.

"There's no question that they want to double their current purchases of U.S. parts," said John Reilly, president of Tenneco Automotive and chairman of an industry committee that is advising Washington on automotive trade issues. "They're working very aggressively to source everything they can. Unfortunately, doing that still won't solve our trade problems with Japan."

In recent weeks, Nissan Motor Co. Ltd., Mitsubishi Motors Corp. and Toyota Motor Corp. have announced independent plans to increase their U.S. purchases.

Commitments from Toyota alone will increase U.S. parts sales more than $2.3 billion in 1992 over 1988.

But the Japanese commitments are still being met by skepticism. Some industry officials have consistently called the Japanese industry figures inflated, contending that they include such misleading data as the value of subcomponents imported by U.S. subsidiaries of Japanese suppliers, then sold to transplants here.

A recent report by the University of Michigan's Office for the Study of Automotive Transportation calculated that the value of Japanese purchases of parts from traditional U.S. suppliers is less than claimed — representing about $5.7 billion in 1989, not the $7.1 billion claimed by the Japanese.

"Twenty billion dollars is ridiculous," said Sean McAlinden, a University of Michigan economist and one of the authors of its study.

"There's no way they could buy that much U.S. content. They'd have to move 600 (Japanese) suppliers to the United States."

Participants in Las Vegas downplayed the political aspects of the meetings. But the encouraging reports came as Washington and U.S. industry forces are complaining loudly about what they call Japan's slow progress in helping reduce its automotive trade imbalance with the United States.

The University of Michigan study, which was prepared for a congressional advisory committee this spring, warned that the U.S. "auto parts deficit" with Japan will increase from $10.5 billion last year to about $22 billion in 1994.

A joint statement released prior to the Las Vegas meetings by the Japan Automobile Manufacturers Association and the Motor and Equipment Manufacturers Association said that the parts trade deficit improved by $1 billion in 1990. Official U.S. Commerce Department figures indicate an improvement of only $400 million.

Using Japanese industry figures, the JAMA-MEMA statement calculated that Japanese purchases of U.S. parts and material rose from $7.1 billion in 1989 to more than $9 billion in 1990. Those figures include items used within the United States by the Japanese transplant factories, as well as exports.

However, McAlinden and others believe that the reduction in the parts trade deficit was due almost entirely to economic recession here, rather than more purchasing by Japanese carmakers.

Whatever the real figures, McAlinden predicts that last year's deficit reduction will prove temporary and that the deficit will resume its increase during the next few years.

Meanwhile, a number of Japanese companies have made independent promises in recent months to increase their U.S. purchases:

- Toyota Motor Corp. said it will increase its U.S. purchases at Toyota Motor Manufacturing U.S.A. Inc. from $700 million in 1990 to $1.2 billion by 1992. Toyota Motor Corp. said it will import another $1.5 billion worth of parts to Japan. In 1988, Toyota imported $350 million from the United States.
- Nissan Motor Ltd. will spend $900 million to import U.S. production parts to Japan in 1991, up from $763 million in 1990. In the late 1990s, the company plans to import approximately $1.5 billion in U.S. parts.

Last year, Nissan purchased an additional $650 million in domestic parts for its Smyrna, Tenn., car and truck plant.

A company spokesman said local procurement will rise, but not necessarily double while Nissan doubles U.S. output.

- Mitsubishi Motors Corp. said it will double its purchases from $170 million last year to $340 million by 1995.

CHRYSLER

FROM PAGE 1

eated a timetable. Many Chrysler watchers have suggested that the chairman would like to go out in a blaze of glory following the successful launch of the 1992 Jeep Grand Cherokee sport-utility and 1993 LH sedans being introduced next year.

In addition, Iacocca's contract with Chrysler will reward him handsomely should he stay into 1992. After Jan. 1, 1992, Chrysler will give Iacocca 62,500 shares of common stock for every additional quarter he works.

But clearly the Iacocca era is winding down at Chrysler.

Noted Iacocca protege Richard Dauch, when he resigned as executive vice president of worldwide manufacturing in April, "an end of an era is coming at Chrysler."

But an orderly succession at Chrysler was thwarted when Iacocca's annointed heir apparent Gerald Greenwald left the company in May 1990 to lead a failed union buyout of UAL Corp., parent of United Airlines. Greenwald's departure forced Iacocca to remain at the company to work out a new succession scenario.

But growing sentiment within the industry suggests that Iacocca's retirement is overdue and it is time for a new regime.

Clearly, Chrysler President Robert Lutz has stepped in to take a strong operational role and he and Vice Chairman Robert S. Miller Jr. remain the leading inside contenders to assume the chairmanship.

But rumors remain rife within automotive circles about possible outside successors to Iacocca should the board of directors decide to look past Lutz or Miller.

As in any situation where there is uncertainty, the Iacocca succession has generated many rumors linking outsiders from various backgrounds to the job. One widely reported rumor has suggested General Motors Executive Vice President William E. Hoglund as a successor to Iacocca. Hoglund publicly has denied being approached by Chrysler.

It is not surprising that White's retirement has fueled the rumor mill.

"White's (announced) departure has caused speculation within the company that Lee Iacocca may be serious about stepping out or taking a lesser role in the company," said the company source. "Iacocca is giving up someone who advised him on a lot of day-to-day things."

In the acknowledgements that opened his second book, *Talking Straight*, Iacocca described White as a friend. One source who knows both men says that does not mean White and Iacocca are social buddies. Nor would the term "cronies" apply to the two men as it does to Iacocca's relationship with Bennett Bidwell, who retired as chairman of Chrysler Motors at the end of 1990, although he remains chairman of Pentastar Transportation Group Inc.

Rather, the Iacocca/White relationship is one in which Iacocca will seek White's counsel on a range of day-to-day issues pertaining to the chairmanship but not necessarily the larger corporate strategy and policy issues. Iacocca has relied heavily on White over the years for advice on executive personnel moves and organizational matters.

A quiet executive who has long shied from press attention, White is described as one of the few at Chrysler who can "shoot the breeze" with Iacocca.

He also is the sole member of Chrysler's current executive team who was an officer when Iacocca joined the company on Nov. 2, 1978, and began firing executives.

White, who joined Chrysler in 1953, was named a vice president in 1968.

"Over a three-year period, I had to fire 33 out of 35 vice presidents," Iacocca said in his best-selling autobiography. "That's one a month. In a few cases, I tried to resurrect some of the executives, but it didn't work — they just couldn't cut it."

White did manage to cut it. His responsibilities have included general manager of the Chrysler-Plymouth Division in 1967 and vice president of Latin America operations in 1970. He moved into the personnel and organization arena in 1975.

White, who was named to his present position in 1989, is responsible for all salaried personnel policy, planning and control functions and management personnel activities. Administrative services also is under his direction.

ORBITAL

FROM PAGE 1

Johnsen is in Australia "for several weeks" and could not be reached for comment, his office said.

Kaska said Orbital stock is already available in America. Shares of Orbital Engine Co. Ltd., the Australian parent company, are listed on the "pink sheets," a minor market containing typically small companies.

Orbital has expressed an interest in marketing stock in the United States, according to a spokeswoman at the American Stock Exchange.

"We are reviewing opportunities in the financial market to see what's available," Kaska said. "Things haven't really been finalized."

Orbital USA employs 30 office people at a former GM plant in Tecumseh, Mich., 50 miles southwest of Detroit. It is the American subsidiary of Australian Ralph Sarich's Orbital Engine Co. Ltd.

The Australian company is developing a well-publicized engine breathing system that it claims will allow the two-stroke engine to meet strict U.S. emissions controls while delivering better fuel economy than four-stroke engines.

Two-strokes are accepted as more efficient, but Ford, GM and other automakers say they have not yet solved the problem of substandard emissions quality and of making a hot-running two-stroke engine meet emissions standards for 10 years or 100,000 miles.

In response to repeated requests for an interview with Stout or anyone else at Government Investment Management Corp. who could explain the relationship with Orbital or even describe Government Investment Management, the company last Thursday issued a short statement promoting Orbital as an investment.

"If (Orbital's) tests are verified, it can have more impact on global warming than all the laws passed in the last decade," the statement said. "GIM Corp. is interested in this company and continues to investigate whether the technology will pass EPA testing and whether the public policy process will accept it.

"Our interest is discovering the facts and making them available to our investment customers. We are not paid advisors to Orbital, the automotive industry or the environmental community."

Orbital recently made a big splash in Australia with claims that its two-stroke engine, installed in a Honda CRX, combined low emissions with fuel economy up to 30 percent better than the Honda engine. The EPA has not verified Orbital's findings.

Environmental groups applauded Stout and Orbital and said they will gladly support the engine company if its claims prove to be correct.

Dan Becker, director of the global warming and energy program for the Sierra Club, said he received materials from Stout concerning the Orbital two-stroke engine. As a supporter of a bill sponsored by Sen. Richard Bryan, D-Nev., which calls for a 40 percent increase in CAFE, Becker said his group is quite familiar with two-stoke engines.

"Orbital didn't enlighten us," he said. "I'm pleased the two-stoke engine is getting some publicity."

Staff Reporters Diana Kurylko and Jack Keebler contributed to this report.

Orbital's very quiet friend

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

Government Investment Management Corp. is housed in an office building a block from the swanky part of Washington's Connecticut Avenue.

Government Investment Management shares an office with the Battle of Normandy Foundation. Anthony Stout is president of both, according to a woman who works for the foundation.

Stout is the self-described government adviser to Orbital who has been trying to enlist environmentalists to "front" for Orbital Engine Co. USA in pursuit of much higher corporate average fuel economy standards.

In the reception area, only the Normandy Foundation has a plaque. The small lobby is crowded with World War II black-and-white photographs and recruiting posters.

When *Automotive News* showed up at the office, a receptionist said Stout was not available and would not be in that day (Thursday), but that Steve Goune, another officer, was in.

She said she didn't have any literature on the company.

She called Goune and said he would be available for an interview in two hours, at 3:30 p.m.

But at 3:30, she said Goune had been delayed and would not be available until the next day. She said no one else could talk to *Automotive News*, even to describe the company.

The next day, Stout's secretary said Stout was still out of town and Goune would not be able to talk.

Chevrolet Corvette	$2,000

HONDA (expires July 3)

Civic 4-door (1991)	$400
Accord (1990)	$400
Accord (1991, except EX)	$400
Accord wagon (1991)	$750

HYUNDAI (1991, expires July 2)

Scoupe, Sonata	$100-300, based on sales

ISUZU (expires June 30)

1990-91 models	$800-2,000 based on sales

MAZDA (expires July 2 on cars, Aug. 2 on MPV)

626, MX-6 (1991)	$1,000
MPV (1991)	$800

MITSUBISHI* (1990-91 models; expires June 30)

Mirage	$250-1,200
Galant	$200-1,700
Eclipse	$200-1,700
Pickup	$200-1,500
Montero	$200-1,800

*Mitsubishi rebates differ by region. Some are flat payments; some are based on number sold; some are based on performance against quota.

NISSAN (1991, expires Aug. 2)

Sentra E, XE, GXE	$400
Stanza	$1,400
Maxima	$800-1,000, quota
240SX	$600-800, quota
300ZX	$1,500
Trucks	$1,200
Trucks (California only)	$1,300-1,500, quota
Pathfinder	$1,000-1,400, quota

PEUGEOT (1990, no expiration date) $2,000

SUZUKI (expires Aug. 2)

Swift (1990-91)	$400-1,000
Sidekick (1990)	$1,000
Sidekick (1991)	$300-1,000

TOYOTA (expires Aug. 2)

Corolla	$300-900, based on number sold
Camry, trucks	$300-1,100, based on number sold

VOLKSWAGEN

Golf, Jetta (1991, expires June 30)	$500, based on number sold
All cars (1990, no expiration date)	$300-1,500

VOLVO (expires June 30)

740 and 940-SE (1991)	$1,500

GM schools Soviets in carmaking

But don't expect big Buicks to displace Ladas in Red Square

By Clinton O'Brien
THE ASSOCIATED PRESS

MOSCOW — Passing another milestone on the bumpy road toward capitalism, Soviet officials have started taking lessons in American-style carmaking from an avid teacher — General Motors.

But one of more than 100 rapt Soviet auto industry specialists who attended a recent three-day seminar on auto production and marketing in Moscow said his country won't slavishly copy America's big luxury cars.

"We don't need to build the Buick Park Avenue car here," said Soviet Automobile Ministry official Dmitri Yurushkin after GM experts explained how the car was developed and marketed.

Instead, Soviet automakers keen on grabbing a larger share of the world car market hope to use U.S. engine parts to improve their own modest "Soviet-style" cars, he said.

The seminar exposed the Soviets to such foreign concepts as customer surveys, targeting television advertisements and offering free tennis racquets to entice car buyers. It stemmed from a $1 billion deal signed a year ago by GM and the Soviet Union.

Some of the Soviet participants said they were disappointed that GM officials didn't reveal more about how free-market competition affects their operations.

Tina Poplavskaya, an auto industry economist studying at the Moscow Scientific Research Institute, asked one GM speaker what percentage of the corporation's budget is spent on marketing. The speaker declined to say.

"I thought maybe it was a war secret," Poplavskaya said. "Later, I understood that they just don't want their competition to know."

Vince Barabba, GM's worldwide marketing research director, said he was impressed at how much Soviet engineers knew about car design. But the Soviets were amazed when he talked about union officials negotiating with factory managers about quality control, asking him: "What do unions have to do with it?"

Under its five-year contract with the Volga Auto Works, known as VAZ, GM will supply 100,000 to 150,000 engine control systems annually. The deal with VAZ, the Soviet Union's biggest automaker and producer of Ladas, is by far the largest signed between a U.S. automaker and the Soviet Union. The GM systems consist of spark plugs, filters, catalytic converters and computers to regulate car emissions.

VAZ makes about 750,000 cars a year, and 40 percent are exported. Overall, about 1.3 million cars were produced in the Soviet Union last year.

Yurushkin, a senior-level official at the Ministry of Automobile and Agricultural Machinery, said VAZ needs to install the U.S. components to continue exporting cars to Europe. Clean air rules taking effect next year require that all cars sold in Europe have catalytic converters to curb emissions.

The Soviets agreed to pay precious foreign currency for the components. This made the deal a coup for GM, since the Soviets have a limited supply of foreign currency, earned mainly from oil and gold exports.

Because the ruble is not convertible, many foreign firms that do business here must settle for barter arrangements instead of cash.

Greg De Yonker, a GM negotiator of the contract and an organizer of the seminar, said the company hopes to conclude more deals with the Soviets, including a possible joint venture to produce catalytic converters.

"But we are proceeding cautiously," he said, adding that GM is concerned about the unstable Soviet economy and political situation.

The company has raised its profile recently in the Soviet Union, opening offices in Moscow and Togliatti, the city about 600 miles southeast of the Soviet capital where VAZ is located.

Italian carmaker Fiat S.p.A., which built the huge Togliatti complex for Moscow under contract, agreed late last month to take a 30 percent equity stake in VAZ, the first such deal between the Soviets and a Western company.

NADA

FROM PAGE 4

data on the volume of vehicles by manufacturer and the percentage of total new-car sales.

Other areas of concern voiced by NADA dealer-directors include financial subsidies on units sold to daily rental companies, advertising and warranties offered by manufacturers to sell the vehicles.

"Dealers are enjoying some short-term benefits from program car sales, but they are concerned about the long-term impact these sales will have on the new-car departments," said Anderson.

Program cars are sold to daily rental companies, then repurchased by the automakers at a guaranteed depreciation rate and redistributed to dealers through auto auctions.

Some industry estimates put the number of program cars by all domestic and foreign manufacturers at 1.5 million units this year.

Program cars have come under fire by dealers who say the clean, low-mileage cars steal from new-car sales even though profits on these units is higher than on the sale of new cars.

Substitution of nearly new cars for new cars by buyers can run as high as 40 percent, according to some industry estimates.

Royal Prince borrows Opel mechanicals and uses a rear-drive layout.

PRINCELY: *Daewoo revamps its popular Royal*

SEOUL, South Korea — Daewoo Motor Co. has introduced its new V-car, the Royal Prince, marking the first major change in the popular Royal series since its debut a decade ago.

The company, of which General Motors owns 50 percent, said it expects to sell about 20,000 units a month in the home market. The car will not be exported.

Based on Opel mechanicals, the rear-wheel-drive car has new skin and drivetrain improvements. It will be priced from 10 million won to 16 million won (about $13,800 to $22,100), which puts it in competition with the Hyundai Sonata and Grandeur and Kia Motors' Concord.

The high-end Prince has a 2.0-liter, four-cylinder multi-point fuel-injected engine that turns out 115 horsepower at 5,200 rpm. Anti-lock brakes are standard.

At 189 inches, the car is two inches shorter than its predecessor but has the same wheelbase, 105.2 inches. Curb weight is 2,772 pounds, 88 pounds more than its previous model.

BMW offers incentives; Hyundai sweetens the pot

BMW of North America Inc. and Hyundai Motor America are helping to keep the incentive fires burning.

BMW is offering buyers cut-rate loans on its 1991 5-series and 7-series cars.

The rates are 3.9 percent to 6.9 percent on the 525i, 2.9 percent to 8.9 percent on the 535i, 1.9 percent to 6.9 percent on the 735i and 735iL and 2.9 percent to 7.9 percent on the 750iL.

If customers choose not to accept the special finance program, dealers receive $4,000 on sales of 7-series cars.

Also, dealers receive a rebate of $2,500 on 1991 325iX and M3. BMW's program expires June 30.

Under its "Valued Owner Program," **Hyundai Motor America** is offering its current owners a $500 rebate on a new Hyundai car through July 8.

This rebate is in addition to Hyundai's other customer incentives, which range from $500 to $1,000 through July 2.

home with factory workers on a regular basis — not as a company perk but simply to test-drive the cars before they are sold.

The program will let all 5,000 workers at the Spring Hill, Tenn., plant drive the cars home and tool around town. Plant officials said the test drives might last one day or over a weekend and put 50 to 100 miles on the odometer.

"Our aim is to make sure the cars going out of here are as good as they're supposed to be," said Jack O'Toole, Saturn's business team adviser for vehicle systems. "We plan to be twice as hard on ourselves as any customer would be."

> "Our aim is to make sure the cars going out of here are as good as they're supposed to be."
>
> **Jack O'Toole**
> Saturn

O'Toole said about 25 cars a day — or about one out of every 21 built — are already going home with plant workers, and the program will be expanded. It will continue indefinitely.

"The end result will be to show whoever buys a Saturn that there are real people behind the car," he said, "that it came from a factory where it was built by somebody who really cares about the quality of the product they just bought."

Saturn will track each car from the factory to the customer's driveway. The final stage of the program will require plant employees to contact the person who buys the car.

"The team member will call the customer at home and say, 'I'm the guy who put those 75 miles on your car. Here's why I did it. I built your car. How do you feel about it?' " O'Toole said.

Employees will be required to fill out a detailed four-page evaluation form, giving their impressions of the car's performance and handling and the overall driving experience.

Participating employees will meet each morning before their work shift to discuss the cars further, O'Toole said.

He said Saturn is also trying to put plant employees in closer communication with Saturn dealers. Each of the approximately 125 dealers has been "adopted" by a Saturn plant worker, who is expected to talk with the dealer frequently, answer questions and help solve any problem that arises.

Saturn has adopted a number of practices that differ from general U.S. industry procedures. Plant workers participate in such functions as car design, machinery purchases and retailer selections. Last fall, the company suffered through a slower-than-planned production startup to give workers more time to adjust to new plant assembly processes.

This spring, when the company found that more than 1,800 cars had been shipped from the plant with faulty engine coolant, Saturn informed buyers that it would replace the cars.

Second shift to return on Grand Prix

By Bob DeMayer
SPECIAL CORRESPONDENT

A ray of sunlight escaped through the dark clouds above the domestic auto industry last week.

General Motors announced that it will add a second shift and recall about 700 employees by September when 1992 Pontiac Grand Prix production accelerates in Kansas City, Kan.

"Through the last 30 days, Grand Prix's daily selling rate has been at its highest level since last October and, as a result, the number of Grand Prix models currently in dealer inventory is at the lowest level since May 1988," said John Middlebrook, Pontiac general manager.

The plant has been operating on one shift since April 2, when production was decreased and approximately 1,000 people were laid off. About 300 of those employees returned to work in May in response to improved sales.

Carmakers scheduled 119,311 automobiles last week, 0.14 percent above the preceding week but 20.03 percent below the year-ago week.

Year-to-date, U.S. car production is 2,629,460, down 13.60 percent from last year.

Truckmakers planned to build 84,526 trucks last week, 4.86 percent above the prior week but 10.23 percent below last year.

So far this year, 1,585,853 trucks have been assembled, 20.99 percent below last year's total at this time.

GM scheduled two shifts of overtime last Saturday at its Pontiac, Mich., (West) and Baltimore truck plants and one shift of overtime at its No. 2 truck plant in Flint, Mich., and its Oklahoma City and Willow Run, Mich., car plants.

Ford Motor Co.'s Louisville, Ky., truck plant was closed for vacation last week.

Chrysler Corp. scheduled two shifts of overtime last Saturday at its St. Louis (No. 2) minivan plant.

CANADA: Canadian car production was estimated at 29,589 last week, up 1.08 percent from the prior week and up 13.96 percent from the year-ago week.

Truck production last week was estimated at 21,352, up 0.18 percent from the previous week and up 6.35 percent from the year-ago week.

GM scheduled one shift of overtime last Saturday at its Oshawa, Ontario, (No. 1 and No. 2) car plants and the Oshawa truck plant.

Ford scheduled one shift of overtime last Saturday at its St. Thomas, Ontario, car plant.

Chrysler scheduled two shifts of overtime last Saturday at its two Windsor, truck plants.

Pontiac, Chrysler use videos in direct-mail minivan battle

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Pontiac and Chrysler Corp. have launched new offensives in the million-unit minivan market with direct-mail videocassettes to current and prospective owners.

Pontiac fired the first salvo when it sent five-minute videos to 250,000 Dodge Caravan and Plymouth Voyager owners in mid-May.

The strategy was to capture the attention of Chrysler minivan owners who may have been concerned about a February *Consumer Reports* article that said Chrysler vehicles equipped with the A-604 Ultradrive four-speed automatic transmission were unreliable, said Art Pepin, vice president and Pontiac account director at Intergroup Marketing and Promotion, which produced the video.

Most Chrysler minivans are equipped with the transmission.

Intergroup Marketing and Promotion is a subsidiary of D'Arcy Masius Benton & Bowles Inc. in Bloomfield Hills, Mich., which handles the Pontiac advertising account.

Chrysler's share of the U.S. minivan segment slipped from 46.4 percent in January to 39.3 percent in May. Pontiac Trans Sport's share of the minivan market is less than 2.5 percent.

In 1990, about 940,000 minivans were sold in the United States.

"We thought it was a pretty good opportunity to build awareness about Trans Sport," said Pepin.

Chrysler fired back with a video of its own, touting its minivans' styling, engineering and safety features.

That video began landing in the mailboxes of 250,000 Caravan and Voyager owners as well as 140,000 owners of key competitive products in late June.

Advertising Age, a sister publication to *Automotive News*, estimates it cost Chrysler $1 million and Pontiac $600,000 to produce

British makers ready price cuts

Nissan strikes first, Ford may follow

By Vaughn Freeman
SPECIAL CORRESPONDENT

LONDON — Britain's beleaguered carmakers, apparently writing off their earlier hopes of a second-half rebound in sales, are preparing across-the-board price cuts of up to 10 percent to try to jump start demand, according to industry sources.

Nissan U.K. Ltd., the privately held importer and distributor of Nissans in Britain, last week slashed its sticker prices by up to £1,100 (about $1,650) on its Micra, New Sunny and Primera/Infiniti models. The rollback follows cuts of up to £3,850 ($6,350) earlier on high-end models like the 300ZX.

Ford spruces up U.K. stores, Page 20

Ford, General Motors' Vauxhall unit, and Rover, which has announced plans to raise prices 2.5 percent, have denied that they intend to follow suit. But the denials have been nonspecific, and Ford dealer sources say they expect a price rollback to be announced at a national dealers' meeting the automaker has set for this Wednesday.

As market leader in the United Kingdom with an approximate 25 percent share, any price cut by Ford would have to be matched by the other major carmakers, analysts point out.

see PRICE CUT, page 41

Ford won't have Suburban-fighter for '93

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Faced with dwindling cash, Ford Motor Co. has rejected a proposal to introduce an oversized sport-utility in 1993 to compete with General Motors' popular Chevrolet and GMC Suburbans.

Ford may consider a Suburban-fighter for later in the decade.

The delay, combined with Chevrolet's dominance so far this year in full-sized pickup trucks, has put worry lines on the faces of some Ford engineers. They say the company needs to spend more money to speed development of new trucks and create performance models of existing trucks.

Ford's F-series pickup, the best-selling vehicle in the United States for nine straight years, has fallen behind the Honda Accord and the Chevrolet C/K pickup this year.

Ford engineers say Chevy's trucks have a fresh look and some of the C/Ks have been pumped up with more powerful engines to attract younger customers.

Ford's F series will get a facelift for the 1992 model year, but an all-new F series won't show till the second half of the decade.

Suggestions to rev up some F-series models to compete with the powerful Chevrolet 454 SS full-sized pickup have been all but ignored, engineers say.

"Trucks are going to be the sports cars of the '90s," said a Ford engineer. "We desperately need an image truck (like the 454 SS or GMC Syclone), but with the economic climate around here, it's like chasing a band of wild animals" to get a new program going.

Now that Chrysler Corp. has killed its Jeep Grand Wagoneer, the Suburban has the extended sport-utility market to itself. The closest competitor Ford has is the full-sized Bronco, which will be

Europeans use cash to spur sales

Most importers are low key about customer, dealer incentives

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Importers of European luxury cars haven't yet hung up the "We're Dealin'!" banners, but like the rest of the industry, they're putting "cash in the glovebox" to get people to buy.

The giveaways are unusual for high-line brands, which are generally too image-conscious to offer cash directly to the consumer. But nearly every one is offering dealer-cash incentives, special leases or low-interest loans.

European luxury brands have resorted to incentives before. Cut-rate loans and leases are especially common. But until recently, the Europeans saved their dealer cash for leftover models from the year before or a model that was about to be discontinued or replaced.

This year, because of the recession, competition from new Japanese entries and the six-month-old luxury tax — in short, because sales are awful — even the most stiff-necked importers are placing incentives on cars, sooner and deeper than ever.

"I don't know of anybody who's not offering cash in the glovebox in some form, and that includes Rolls-Royce," said Joseph Bennett, public relations manager for Audi of America Inc., which is itself offering special lease rates and some dealer cash.

Rolls-Royce Motor Cars Inc. and Jaguar Cars Inc. are both offering to reimburse their customers for the luxury tax on cars over $30,000. That offer could cost Jaguar $1 million a month and Rolls-Royce nearly that much, on a much smaller volume of cars.

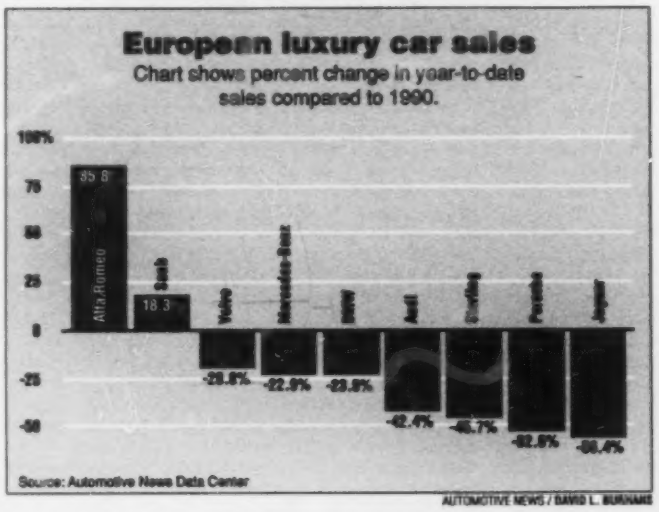
Meanwhile, Mercedes-Benz of North America Inc. has probably spent at least $10 million to $20 million since January in dealer "marketing allowances" on its top-of-the-line S class.

According to Jacobs Automotive Inc., a consulting firm in Little Falls, N.J., that pays close attention to the European luxury brands, Mercedes is offering dealers at least $2,000 to $4,000 per car on the S class. The offer has been in force since last year.

The S class will be replaced in October. Through May, Mercedes sales were down 22.9 percent, the S class was down 37.7 percent.

Michael Jackson, senior vice president of marketing and sales, declined to discuss the amount of money Mercedes is spending on marketing allowances, special leases and other incentives. "That's an issue we would prefer to keep between ourselves and our business partners, that is, our dealers,"

see EUROPEANS, page 44



Deals for European wheels

Here are incentives offered by European luxury brands, according to Jacobs Automotive. Expiration dates vary.

- **Alfa Romeo:** Special leases on the 164. Scheduled to expire yesterday were dealer rebates of $2,500 on the 164 and $1,000 on the Spider convertible, plus bonuses for sales managers and salespersons.
- **Audi:** Dealer cash up to $3,500 for each 100/200 model sold and special leases through September; floorplan assistance for certain models ordered from port stock plus incentives on used cars. Earlier this year, dealer cash ranged from $1,000 to $4,000 on certain models.
- **BMW:** Cut-rate leases and finance rates on 7-series models. Scheduled to expire yesterday were dealer rebates of $2,500 on the 1991 325iX and M3 and the 1990 325is, $4,000 on 1990 7-series cars and $4,000 on 1991 7-series models if the buyers did not choose to use the special finance plan. Other reduced leases and loan rates also were to expire yesterday.
- **Jaguar:** Buyer rebates equal to the luxury tax, through Aug. 31; special leases; dealer rebates of $4,000 on 1989-90 XJ-S models. A dealer payment of $4,000 on 1991 XJ-S coupes was scheduled to expire yesterday.
- **Mercedes-Benz:** Besides the $2,000-$4,000 dealer "marketing allowance" for the expiring S class, Mercedes is offering reduced-rate leases on the 190 and dealer lease and market allowances of $3,000 to $5,000 on the 300SE, the 350SD, the 420SEL and the 560SEL.
- **Porsche:** Bonuses to salespersons of $400 to $1,000 on 944s and $400 to $2,000 on 928s.
- **Saab:** Financing as low as 3.5 percent on all 9000 models; incentives to salespersons, sales managers and finance and insurance managers on all models. Saab struck a blow for the efficacy of cut-rate financing when its low-interest loans and leases debuted in March and sales soared. Since then, the program has been scaled back.
- **Sterling:** Scheduled to expire yesterday were dealer rebates of $2,000 on 1991s and $5,000 on 1990s; bonuses to salespersons of $250 per unit sold and bonuses to sales managers of $62.50, and a leasing program. Michael Jackling, vice president of marketing and sales, said Sterling Motor Cars is sold out of 1990 models, and dealers probably have few left.
- **Volvo:** Bonuses of $100 to $1,000 to salespersons on 240 and 700 series models. Scheduled to expire yesterday were special lease rates on certain 700 series and 900 series models and dealer rebates of $1,750 on turbo models and $1,000 on non-turbo models.

YUGO

Prior begins CPR on ailing franchise

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

UPPER SADDLE RIVER, N.J. — William E. Prior has taken over a Yugo America that isn't dead, but it sure has been comatose.

Prior: Dealers are a priority.

Since emerging from bankruptcy nearly 18 months ago, Yugo has seen its monthly sales drop from nearly 879 in January 1990 to just 116 in May.

As a result, Prior says his first mission is to grab Yugo's 175 dealers "by the lapels" and convince them that the franchise deserves some attention.

"It's a easy franchise to forget," said Prior, 45, who co-founded Yugo in 1985 and rejoined the company two months ago as its chief operating officer. In May, at least 60 Yugo dealers sold no cars at all.

But Prior hit the ground running, grinding out plans, goals, milestones and timetables.

He wants the company to break even in the 1992 model year. His 1992 volume target is 12,000 to 15,000 units — a far cry from Yugo's peak of 48,812 in 1987. Even though Yugo sold only 1,004 cars through May, Prior hopes to boost that to 4,500 for this calendar year.

In the longer term, Prior also has plans for addressing Yugo's chronic problems, such as improving the quality image of the nation's lowest-priced new car ($4,825). He also wants to secure a permanent source for retail and wholesale financing.

But for now, he says Yugo is in "triage," spending money and attention only on issues of immediate survival.

Prior announced at a dealer meeting in early June that Yugo had begun offering incentives for

Mitsubishi retreats from dumping fray, touts Expo as a car

By Kristine Sliven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Until this spring, any debate at Mitsubishi Motor Sales of America Inc. over how to classify its new Expo and Expo LRV was purely a marketing discussion.

But now that the U.S. government is looking into charges that Japanese automakers are dumping minivans, the debate has taken on a broader urgency for Mitsubishi, which launches the vehicles Aug. 1.

Pontiac, Chrysler video war, Page 1

Expos are sport wagons, Page 22

Last week Mitsubishi tried to distance itself from the melee by stressing the "wagon-ness" of the Expo — a vehicle that on the surface appears to be part wagon, part van.

"Both these vehicles are passenger cars," Mitsubishi said in a letter to the press. From the moment the vehicles were conceived, they were "designed for consumers who prefer passenger cars to minivans."

But in the eyes of the Big 3, the Expo was all minivan during June 21 testimony before the International Trade Commission, which is expected to decide by July 10 whether to proceed with the dumping case.

The Expo was mentioned as a threat that could rob the Big 3 of 60,000 minivan sales annually.

If the Expo is deemed a minivan, Mitsubishi would be subject to tariffs if the charge that the Japanese have been selling at below fair market value holds up. That could be damaging for Mitsubishi. Nissan's Axxess, a vehicle similar to the Expo, flopped in the United States partly because it was priced too high.

Mitsubishi expects the Expo LRV, a five-passenger vehicle that will be pitched for its cargo-carrying ability, to begin at less than $11,000. And the Expo, a seven-passenger people carrier, will start at $14,000. Both prices are below those of most minivans.

Exactly what makes a "minivan" depends on who's deciding. In Washington, one vehicle can sometimes be classified differently, depending on the government agency that's writing the rules.

Mitsubishi argues that the Expo is unmistakably a car: It will meet car standards for emissions, safety and fuel economy.

But the two agencies reviewing the dumping petition, the Commerce Department and the ITC, have differing views.

The original petition from the Big 3 contained a six-point definition of a minivan, since adopted by the Commerce Department:

- A gross vehicle weight of lessthan 6,000 pounds. Weights range from 3,924 pounds for the Expo LRV to 4,606 pounds for the Expo with all-wheel drive.
- Height between 62 and 74 inches. While shorter than tradi-

Ford, Mazda break off talks for joint venture in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

COLOGNE, Germany — Ford of Europe and Mazda Motor Corp. have ended long-term negotiations aimed at setting up a European joint production venture, leaving Mazda as the only major Japanese automaker without a firm agreement to build cars in Europe.

The two companies have discussed several joint-venture possibilities in recent years, including a plan to expand Ford's production facilities in Saarlouis, Germany, to share output of a new Mazda-based coupe. According to senior Ford executives, however, the companies could not come up with a mutually advantageous project.

Ford owns 23.4 percent of Mazda, and Mazda produces the Ford Probe in Flat Rock, Mich.

"There was an awful lot of comment about negotiations going on, the possibility of Mazda and Ford in Germany doing some sort of joint production, and our Saarlouis plant was part of that story," John Hardiman, chairman of Ford Werke AG, said last week.

"We have effectively ended those discussions, at least for the moment," he said. "Whether we will resurrect them and do something like that together or not . . . is not being actively pursued."

In the absence of an accord with Mazda, Ford has announced agreements to build niche products with other partners. Ford has agreed to design and build a minivan with Volkswagen AG at a plant in Setabul, Portugal, beginning in 1994, and will co-produce a new leisure-utility vehicle with Nissan Motor Co. in Barcelona, Spain, starting in 1993.

> We have ended those discussions, at least for the moment. Whether we resurrect them and do something like that together or not . . . is not being actively pursued.
>
> **John Hardiman**
> Ford Werke AG chairman

Hardiman would not describe the precise project under study when the Mazda talks were halted. "We were looking at different concepts," he said.

"We put it all together in different ways, and finally it was just decided that with the concept we were looking at, it was hard to make total sense of it at that time."

Hardiman said Ford and Mazda would still like to find something to do together in the future.

"I think probably the desire is there, but you have to translate the desire to a realistic project," he said.

The breakdown leaves Mazda alone among Japan's top-five carmakers in not having a set plan for production in Europe.

Nissan builds cars in the United Kingdom, and Toyota Motor Corp. and Honda Motor Co. are building car plants there. In addition, Toyota produces light pickups at Volkswagen's plant in Hannover, Germany, and Nissan builds commercial vehicles in Spain.

Mitsubishi Motors Corp. and Sweden's AB Volvo recently announced plans to build 100,000 cars a year at the Dutch government-owned Volvo Car BV plant in the Netherlands. Mitsubishi, Volvo and the government will each own one-third of the new company.

Ford expects to sell under 10,000 Explorers a year in Germany.

Explorer heads to Germany

COLOGNE, Germany — Ford Motor Co.'s German unit plans to import the Explorer beginning next year as a rapid response to Europe's emerging sport-utility segment.

"I wish I had it now," John Hardiman, chairman of Ford Werke AG, said in an interview last week. "It's been a big success (in the U.S. market) and there is a market for it here."

He sees the project that sport-utility will be a hot growth segment in Europe during the 1990s. General Motors Europe is launching the Isuzu Rodeo/Amigo-based Frontera in the segment this year, and in 1993, Ford will begin joint production with Nissan of a competitor in Spain.

But in the short term, Explorer will cover the top end of the segment. Ford expects annual sales of under 10,000 units, Hardiman said.

Ford of Germany had planned to rebadge the 11-year-old Nissan Patrol in response to Frontera, but recently canceled that plan. Still, Hardiman said Explorer is not a direct answer to the GM vehicle.

"It is not a Frontera response," he said. "The Nissan project will be directly competitive."

Late last year, Ford of Germany begin importing the U.S.-built Probe coupe as a limited response to GM's hot-selling Opel Calibra.

"We're very happy with the Probe," said Hardiman. "We could have done better than we have; we underestimated demand for it."

Hardiman predicted Probe's first-year sales will total 8,500 to 9,000 units.

— Richard Johnson

Head injuries 'possible' for Isuzu Rodeo driver

WASHINGTON — The Isuzu Rodeo was the only vehicle that scored in the "possible" head-injury range in the government's latest round of 35-mph crashes.

The Rodeo, a new sport-utility, had a head-injury score of 1,254 in the National Highway Traffic Safety Administration's 1991 New Car Assessment Program. A score above 1,000 indicates head injury is possible, NHTSA says.

Such scores are not uncommon among sport-utilities. Five of the nine sport-utilities in NHTSA's bank of results have scored above the 1,000 threshold for driver head injury. Five of their scores are above the threshold for passenger head injury, too.

The score for the Rodeo passenger was 884, indicating head-injury was "unlikely."

Four other vehicles were crashed along with the Rodeo: the Geo Storm, Chevrolet Corsica, Honda Accord wagon and Chrysler New Yorker. Each scored in the "unlikely" range for both driver and passenger, and each has a driver-side air bag. The Rodeo has manual safety belts.

They are among 34 vehicles that will be crashed in the 1991 model year.

NHTSA crashes the vehicles to provide information to consumers about the relative safety of cars and light trucks. The agency says comparisons should be made only between vehicles of similar size and weight.

The vehicles are crashed at 35 mph into a fixed barrier.

Successor to Iso unveiled

Piero Rivolta last week took the wraps off the styling mockup of his long-promised Iso Rivolta Grifo 90, now scheduled for a mid-1994 launch. If met, the launch of the Corvette-like Grifo would take place 21 years after the original Iso went out of production. The all-aluminum car, a two-seat coupe penned by Lamborghini Diablo designer Marcello Gandini, will sell in the United States for $200,000 to $240,000 at today's exchange rates. Power will come from a 440 horsepower, twin-turbo Reeves Callaway V-8, pushing the car to a top speed of about 190 mph. Production will be capped at 200 units per year, Rivolta has said.

Safety group claims automatic belts can be deadly

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Car owners should be warned that the automatic seat belts in their vehicles could become death straps, according to a petition filed last week by the Institute for Injury Reduction.

In the petition, the safety advocacy group asked the National Highway Traffic Safety Administration to require carmakers to warn owners of cars with automatic seat belts about the possible deadly defects of the systems.

The petition also called for rulemaking to require air bags and manual shoulder/lap belts in all new vehicles and to outlaw the installation of separate shoulder/lap belts, especially those that anchor to a door of a vehicle.

The group's petition to NHTSA Administrator Jerry Curry followed recent car crash deaths in which the automatic shoulder harness was in place, but the manual lap belt was unbuckled.

NHTSA says only 30 percent of persons who use the belt system buckle the lap belt.

In one crash, the front passenger was decapitated by her automatic shoulder harness, according to an investigation by Calspan Corp., a Buffalo, N.Y., company hired by NHTSA. Her lap belt was not buckled.

Legislation is currently before Congress to require air bags and manual lap/shoulder belts in all vehicles, according to Ben Kelley, president of the Institute for Injury Reduction in Upper Marlboro, Md.

But he said the task really belongs to NHTSA. He said NHTSA has not endorsed the bill even though its studies have shown that the air bag-lap/shoulder belt system is the most effective restraint. He accused NHTSA of "foot-dragging" on all motor vehicle safety.

The group also asked NHTSA to set a public hearing to investigate the hazards of automatic seat belts and to establish countermeasures for them, to publish results after reviewing its files on injuries associated with automatic belt systems and to determine if any of the systems should be recalled for design correction by manufacturers.

Ken Milton, an NHTSA spokesman, said the safety agency had not reviewed the petition and could offer no comment.

Mid-June sales trail last year, but there's a bright side

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Car and truck sales trailed last year's total in mid-June but topped early June by nearly 100,000 units, fueling continued hope that a mild recovery has begun.

Industry sales were 407,302 cars and light trucks, down 4.9 percent from mid-June 1990. But those sales were measured against a fairly strong year-earlier period. There were nine selling days in the period each year.

June 1-10 was the first selling period in 1991 in which unit sales topped the year-earlier figure. But that gain came in comparison to poor year-ago sales.

Car sales were off 3.6 percent in mid-June, and truck sales declined 7.2 percent. The combined dip of 4.9 percent was an improvement over the industry's pace through May, when sales were off 15.9 percent.

American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc. turned in strong mid-June sales. General Motors' sales were off slightly, while declines at Chrysler Corp. and Ford Motor Co. were far greater than the industry average.

"This is the fourth consecutive 10-day sales report that has suggested a recovery is under way," said Tom Webb, chief economist for the National Automobile Dealers Association.

Noting the continued slow pace of improvement, Webb said, "The upturn will be modest and possibly plagued by a few setbacks along the way." He said "affordability is still a problem," and sales probably won't really take off until individual incomes start to rise.

Webb said the mid-June seasonally adjusted annual sales rate for cars was 6.5 million units, down 3 percent from 6.7 million in the year-ago period.

GM's 157,036 car and light-truck sales were off only 1.6 percent from a relatively successful year-ago period. Buick continued to shine, with a 19.4 percent increase. Oldsmobile and GMC also were up.

Ford sales fell 13.8 percent, solely because of an 18.9 percent drop for Ford Division cars and trucks. Both Lincoln and Mercury reported gains for the period.

Chrysler sales plunged 20.2 percent, with the Chrysler make falling twice that, down 40.5 percent. *Automotive News* estimates 10-day sales for Chrysler and for most imports.

Sales for American Honda shot up 30.2 percent, with the Honda brand up 33.7 percent and Acura up 16.7 percent.

Toyota reported an increase of 25.3 percent, with Lexus up 62.9 percent and the Toyota brand climbing 22.8 percent.

Makers increase estimates for third-quarter production

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

It may be only a glimmer of hope, but the auto industry appears to be girding for a firm launch of the 1992 model year.

The most recent U.S. and Canadian light-vehicle production schedules for the third quarter are up from earlier plans for the July-September period.

With inventories under control, model changeover downtime at a minimum and many major changes for the 1992 model year completed, manufacturers plan to build 1.46 percent more light vehicles than in the third quarter of 1990, which was the last quarter before automakers whacked schedules as a result of the sales slump after Iraq invaded Kuwait.

For the first half of 1991, production was off 15.77 percent.

The third quarter upturn is the result of a strong truck schedule and a particularly robust truck plan by Chrysler Corp.

U.S. and Canadian truckmakers plan to build 1,108,028 units this quarter, a significant gain of 11.21 percent over 1990's 996,298.

Chrysler plans to increase third-quarter truck production 60.42 percent over 1990, when it had an extensive changeover for its 1991 minivans.

U.S. and Canadian automakers have scheduled 1,585,565 cars in the third quarter, down 4.40 percent from 1,658,534 in 1990.

Strong increases scheduled by Japanese transplants and the joint-venture operations will help hold car production to a 4.4 percent slip behind 1990. CAMI, Nissan and Subaru-Isuzu have slated the heftiest gains, while Diamond-Star, Hyundai and Mazda expect to fall below 1990 totals.

THIRD QUARTER PRODUCTION FORECAST

U.S. and Canada cars and trucks

	1991	1990	Percent Change

A two-man race is shaping up to succeed Chuck Jordan as vice president of design.

Cadillac design chief off to lead Europe studio

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

The person who helped lead Cadillac toward a new look with the 1992 Seville will be leaving next month to take over General Motors design operations in Europe.

GM is expected to announce this week that Dick Ruzzin, chief designer at Cadillac exterior studios, will assume his new post in Europe about July 15, according to Design Staff sources.

Ruzzin is replacing Wayne Cherry, director of design for Adam Opel AG. Cherry is due to return to this country on Sept. 1 to take over design activities for Chevrolet or the Chevrolet-Pontiac-Canada Group. Cherry's precise duties have not been disclosed, even internally.

Ruzzin is responsible for the 1992 Cadillac Seville and Eldorado, cars that the division said will redefine its image as it tries to reach younger buyers without offending present owners.

His guidance also will be evident in the 1993 Brougham and the 1994 DeVille and Fleetwood, which Cadillac hopes will make it a better competitor for Lexus, Infiniti and Acura buyers.

Design Staff insiders say Ruzzin's successor is expected to be his assistant, Larry Erickson, to provide continuity for Cadillac.

Every Opel since 1982 has been Cherry's responsibility, and during that time several Opels have won top design awards, including the Calibra introduced last year and currently a top seller in Europe.

Cherry's reassignment is viewed internally as a reward for a good job, and sets him up as one of two top candidates to replace Charles M. Jordan, GM's vice president of design. According to GM policy, Jordan must retire when he turns 65 on Oct. 21, 1992.

Cherry is handicapped by his unfamiliarity with the design staff organization at the GM Technical Center in Warren, Mich., but should have ample opportunity to learn the system over the next year, sources said. Cherry has not worked at the Tech Center since the early 1960s, when he went to work for Vauxhall Motors Ltd.

The other top candidate for Jordan's job is said to be Jerry Palmer, executive designer for advanced design and head of the Advanced Concepts Center in California.

Palmer had C-P-C design added to his responsibilities June 1 with the retirement of Stan Wylan.

Palmer has been responsible for most of GM's concept cars in recent years.

FORD

FROM PAGE 1

the more powerful powertrains are a key priority. So are plans to integrate more models and components on common platforms and assembly lines.

Examples include the smaller but stronger modular V-8 and V-6 engines, which deliver better fuel economy, improved performance and lower emissions. New modular 4.6-liter V-8s already appear on the Lincoln Town Car and the Crown Victoria/Grand Marquis line, and a 4.0-liter all-aluminum version is planned. Modular V-6s, due in such models as the 1995 Taurus/Sable redesign, are also planned.

In an internal company publication, David Hagen, general manager of Ford's Engine Division, explained that the modular concept allows the company to manufacture a variety of engine configurations on a flexible line. "New V-8 variations will cost about $60 million to develop compared to about $500 million for a typical new engine program," Hangen wrote. And the company could make the switch "in months versus years."

Ford also appears poised to switch many of its rear-wheel-drive vehicles to front-wheel drive in the 1997-98 timeframe under a program code-named DEW98. The fwd setup will help Ford's corporate average fuel economy scores, and the company would save by basing such cars as the Town Car, Crown Victoria/Grand Marquis and Thunderbird/Cougar on the same platform.

And Ford appears to be increasing its alliance with Japanese partner Mazda Motor Corp. Mazda is due to get a version of Ford's next-generation Ranger pickup, expected for the 1995 model year. Mazda already gets a version of the Explorer sport-utility, and most of Ford's small cars — Festiva, Capri, Probe and Escort/Tracer — are based on Mazda models.

In a new partnership, Ford and Nissan Motor Co. Ltd. will share a minivan that Ford is scheduled to sell as the Mercury Villager next spring.

But another international project, Ford's so-called "world car" program, has been scaled back. The CDW27 program to replace the U.S. Tempo/Topaz and the European Sierra is on track, but U.S. versions won't be built until the 1995 model year.

And what was once the second phase of the world car plan, an effort to build Europe's Scorpio and the U.S. Taurus/Sable on the same platform, has been scrapped.

Apparent delayed projects include a $530 million effort to build electronically controlled four-speed automatic transmissions for Tempo/Topaz. Retooling was planned for 1991 but has been delayed at least a year.

On the car side, analysts and company insiders say the introduction of the 1993 Lincoln Mark VIII will be moved from spring to fall 1992, and the 1995 Continental from spring to fall 1994.

A heavy cloud hangs over the future of the Mustang as the company haggles with the UAW over whether the car can be produced economically. A redesigned Mustang is due for the 1994 model year.

The next-generation Festiva, built by Kia Motors Crop. was originally due out for the 1993 model year but has been postponed a year.

Truck engineers are concerned that future programs could be in jeopardy.

The introduction of a fwd Aerostar has been delayed from the fall 1994 to spring 1995. A Chevrolet/GMC Suburban fighter, which had been expected for 1993, now won't come until late in the decade, if at all.

FUTURE PRODUCT

After Ford executives met with the securities analysts May 22 at the company's Dearborn, Mich., headquarters, Philip Fricke wrote, "There was a heavy emphasis on North American product development, especially powertrain development."

Fricke, an analyst with Prudential Securities Inc. in New York, continued that "in a nutshell, we think Ford made a convincing case that it is committed to bringing very competitive products to the North American market, both in styling and excellent performance."

But, added Fricke: "There was nothing to boost confidence that the company could return to record earnings within the next two or three years, either."

Company insiders caution that future plans can change at any time, particularly with more government regulations looming.

Here is a glimpse of Ford's future plans through the mid-1990s:

Cars

■ **Festiva** — An all-new model, code-named BT57, is due for the 1994 model year.

KGF PHOTOGRAPHY

This photograph of a Ford Probe prototype has been altered to disguise masking; the car will bow next summer and will again share a platform with the Mazda MX-6.

As Ford's smallest car, the two-door hatchback could play an important role if CAFE are dramatically increased. The car is built in South Korea by Kia Motors Corp. A convertible is on the drawing boards and could arrive for 1994.

■ **Escort/Tracer** — A redesign is expected for the 1995 model year and could cost as much as $1 billion. The current cars, now based on Mazda's 323, were introduced in spring 1990 as 1991 models.

Ford planners are concerned about future restyling of the Escort. The 1991 model, although better equipped and improved mechanically, did not go far enough in styling, and the higher price of the new models scared off some of Escort's core customers, the entry-level buyer.

■ **Mustang** — Plans to redesign the Mustang for the 1994 or 1995 model year are up in the air while Ford and the UAW discuss ways to produce the car more efficiently. Insiders say it will also be freshened for the 1993 model year as a response to GM's new Camaro/Firebird models.

Dealers who have seen the prototype for the proposed redesign say it is smaller and sportier than the current Mustangs, reminiscent of the Mustangs of the 1970s.

Ford engineers also say a new-generation Mustang, slated for 1997 or 1998, could be spun off the CDW27 platform that will carry the new Tempo/Topaz.

■ **Capri** — The sporty Capri convertible is slated for a facelift for the 1993 model year. The Australian-built model bowed in 1990 as a 1991 model. Early models were plagued with fit and finish problems that since have been corrected.

■ **Probe** — An all-new Probe is due out by next summer as a 1992½ model. The new Probe, code-named ST44, will take on a more rounded look, similar to the Toyota Celica. As with the current car, the next model will be based on the Mazda MX-6 and built by Mazda in Flat Rock, Mich.

The replacement should give some life to Probe sales, which have slipped considerably since the car bowed in spring 1988 as a 1989 model.

■ **Tempo/Topaz** — Ford and Mercury dealers are clamoring for all new versions of the Tempo/Topaz, and company planners say their wish will come true by the 1995 model year, more than a decade after the model's 1983 debut.

The project, code-named CDW27, will be built on a platform that also will carry the replacement for the European Sierra. Ford's four-cylinder Zeta engines and new modular V-6s will power the CDW27 models. Four-speed electronically controlled transmissions also may be available.

In the interim, a V-6 engine will be available as standard and optional on Tempo/Topaz for the 1992 model year.

■ **Taurus/Sable** — For the 1992 model year, consumers will notice modest exterior and extensive interior changes. An optional passenger-side air bag will be available later in the model year.

The addition of an automatic transmission to the sporty Taurus SHO, which had been due in the 1992 model year, has been delayed a year.

Taurus/Sable are slated for a redesign in 1995, and engineers say a new platform may be introduced later in the decade. The current

Ceccoli takes president's reins

Manheim completes takeover of GE auctions

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

In a seemingly effortless three-month transition, Manheim Auctions Inc. has brought 20 auto auctions from GE Capital Auto Resale Services Inc. into its fold. The merger, which also included Ford Motor Credit Co. as a partner, gives Manheim 46 locations in the United States and Canada.

"The two companies were very compatible," said Warren Young, who has been named vice chairman of Manheim, a division of Cox Enterprises Inc., based in Atlanta. "Manheim had a large dealer base and GE had a large institutional base, so there were a lot of synergies between the companies before the merger."

With Young's promotion to vice chairman from president, Darryll M. Ceccoli, 43, moves to president of Manheim Auctions. He is responsible for company operations.

Young, 64, concedes he is "winding down" after serving as president of Manheim Auctions since 1975. He will work on special projects including acquisitions and real estate.

Ceccoli joined Manheim in 1975 as general manager of its Bordentown, N.J., auction. He became executive vice president of Manheim in 1989 after serving as vice president of operations.

With the merger complete, GE Capital Auto Resale Services apparently operates with only a skeleton crew at its offices in Barrington, Ill. Of the 14 people recently promoted to vice president at Manheim only four were from GE. Stephen McNeely, former president of GE Capital Auto Resale Services, has returned to General Electric Capital Corp. of Stamford, Conn.

The merger, valued at $1.2 billion, capped months of speculation that GE wanted out of the auction business after acquiring 20 auctions in only five years beginning in 1985. Shortly thereafter, Ford took a 20 percent stake in the company. Under the merger agreement, Manheim retains its name, holds a controlling interest in the new company and appoints the majority of the six-member board of directors.

Manheim sold more than 1 million vehicles in 1990, and GE sold more than 900,000.

AUCTION BRIEFS

Auction use by banks up

Financial institutions use auto auctions more than any other method to remarket off-lease and repossessed vehicles, according to a recent survey by GE Capital Auto Resale Services Inc.

The survey included 200 financial institutions, including banks, savings banks, and savings and loans across the United States.

According to the survey, 51.4 percent of financial institutions have used wholesale auto auctions to remarket vehicles and 42.4 percent say auto auctions are the most frequently used method.

Only 11 percent of the banks surveyed said they remarket vehicles using other methods, including retail sales, public auctions, negotiated sales or sealed bid auctions to dealers and wholesalers.

Commercial banks are the heaviest users of auto auctions at 62.8 percent, savings banks at 36.1 percent, and savings and loan institutions at 4.2 percent, according to the survey.

Savings and loans traditionally haven't been in the auto lending business," said a GE Capital spokesman. "If the survey respondent said the institution is still a savings and loan, then they are most likely still focusing their business on mortgages and savings. Savings banks already have a wider product line than savings and loans, including more auto loan packages."

The primary reasons given by all institutions for using auto auctions are fast turnaround, prices, meeting legal requirements and the ease of using them.

The use of auto auctions increases with the volume of vehicles being remarketed monthly, according to the survey.

Seventy-one percent of institutions with more than 50 vehicles remarketed per month use auctions, 67.9 percent of those with 26 to 50 vehicles per month use auctions and 44.2 percent with fewer than 25 vehicles per month use auctions.

All types of financial institutions noted similar problems with the remarketing process.

Nearly half said getting the best price for their vehicles was a significant concern. Damaged vehicles and the cost of getting them repaired was cited by 20 percent as a significant concern.

Other problems mentioned include the effort and cost of reconditioning the vehicles, obtaining titles, the inconvenience of transporting vehicles from remote locations and the amount of management time consumed in the remarketing process.

NAAA convention coming

Indiana Gov. Evan Bayh is the keynote speaker for the National Auto Auction Association convention Sept. 24-29 at the Westin Hotel in Indianapolis.

"We expect to draw more than 1,200 industry officials and guests at the convention this year, making it the largest NAAA convention yet," said Pete Lukasiak, the association's executive director.

The convention and trade show is already a sellout and includes a mix of industry suppliers.

The 1991 workshop schedule includes a vehicle detailing workshop, odometer fraud prevention and regulatory workshop, and estate planning.

The workshop on detailing will discuss the effects of acid rain on vehicle finishes and how the paint can be restored without repainting the vehicle.

Domestic and foreign automakers will discuss their buyback programs for 1992, and manufacturers have been invited to display vehicles on the hotel grounds.

New auction bows

Southern Auto Auction in East Windsor, Conn., has opened a 50,000-square-foot facility housing eight auction lanes. It is located across from the auction's six-lane facility, which will continue to operate, handling factory consignment vehicles.

"As an independent auto auction, we're committed to offering a consistently high quality of service to our customers," said owner Larry Tribble.

"With the completion of the new building, we're able to offer our dealers the most modern facility of its kind. We're also pleased to have a full-service auction facility dedicated to our manufacturers, who continue to play a vital role in our business," Tribble said.

Southern holds regular auctions for such auto manufacturers as General Motors, Chrysler, Toyota, Subaru, Saab, Volkswagen and Audi.

"Our factory and commercial business constitutes about 35 percent of our total volume," said Tribble.

"On auction day, our dealers can expect to find between 1,600 and 2,000 cars and trucks."

Automakers stretch marketing dollars by targeting ads

By Cleveland Horton
and Raymond Serafin
CRAIN NEWS SERVICE

Automakers, once consistent underwriters of various forms of media, are playing a lot harder to get with their $3.5 billion in marketing dollars.

Facing a prolonged slump and being unable to boost ad spending to try to counteract slow sales, car marketers now insist that the media offer more than time or space. Whether it is a demand for a favorable multi-year contract or an unusual cross-media promotion, most are squeezing media reps as hard as they do any other supplier.

And in a drive to tune spending more finely and cut waste, they are building sophisticated data bases and analyzing media to match commercial messages to prospects more efficiently.

Still, the "geo-demographics" of the automobile market make waste inevitable, said Thomas F. Healey, director of media and advertising services for J.D. Power and Associates in Agoura Hills, Calif.

"At any time, only about 6 percent of the adults in the country are involved in the purchase of an automobile," he said. Even inflating that figure to 10 to 15 percent to include those not actively involved but approaching that time, a marketer can hit 100 percent of its prospect pool and still face 85 percent waste.

Nonetheless, Healey sees a trend among auto marketers toward multi-year deals similar to General Motors' recent three-year, $750 million buy from NBC-TV.

"Everyone is looking to get on the bandwagon with big deals," he said. But the byword of the next few years will be "integrated marketing," extending the national campaign with regional efforts, direct response and non-traditional media deals, he said.

Although GM is best known for megabucks deals like the NBC package, the company has been exploring more targeted options.

Buick and its agency, McCann-Erickson Worldwide in Troy, Mich., this spring came up with a magazine buy targeted at ZIP codes that presented the best prospects for its Roadmaster wagon. Saturn Corp. is airing a 30-minute "documercial" on cable networks Arts & Entertainment and VH-1.

Chrysler Corp. has adopted a strategy of going after media properties it can "own and define," said John Damoose, marketing vice president. That translates into ventures such as its sponsorship of the CBS broadcasts of the 1992 and 1994 Winter Olympics and its $50 million cross-media deal with Time Warner that features 11 advertorials in five magazines and special single-advertiser issues of *Fortune*, *People* and *Life*.

Nissan Motor Corp. in U.S.A. recently committed to a regional marketing approach. It pulled back from national print advertising to concentrate on TV, and more recently, it cut back in unrelated areas to increase spot TV advertising in regions that need help.

American Honda Motor Co. Inc. also may make a shift in media strategy. Every other year, Honda monitors media effectiveness by conducting an extensive survey of customers' media preferences.

"We are looking at spot TV more pointedly than ever before," said Gerry Rubin, president of Honda agency Rubin Postaer & Associates in Los Angeles.

Likewise, Mazda Motor of America Inc. last year conducted a proprietary study of the media habits and lifestyles of its target groups, broken down by car models, said Jan Thompson, marketing vice president. The study is the basis for plans to de-emphasize network TV in favor of cable and spot and for more focus on event sponsorships.

"Our whole media strategy is to get much more targeted," she said.

Mazda is particularly interested in value-added marketing proposals from media companies. For instance, Thompson said, a magazine that reaches Mazda's target prospects might host some event for readers that Mazda could tie into.

Another auto marketer that has adopted new media tactics is Volkswagen of America's Volkswagen United States unit. Primarily because of the high cost of network TV, VW last year began moving the $12 million or so that it had spent on network TV into spot TV, c... and radio.

For example, VW is spending about $25 million on network and spot radio this year, out of its estimated $130 million ad budget.

"In order to generate awareness we thought it was important to be big somewhere," said Ron Dusenberry, VW advertising manager.

and distribute the videos.

That figure excludes talent, scripts, sound effects and editing, which "can run tens of thousands of dollars more," said an account executive for sales promotion at a metropolitan Detroit production house.

Chrysler is and has been the minivan leader — traditionally with more than half the market — since it created the segment in 1984 with the introduction of Voyager and Caravan.

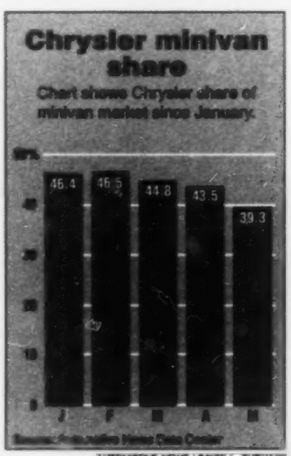
To reinforce its position, Chrysler introduced new lower-priced value versions of Caravan and Voyager in March. About $1,400 worth of optional equipment is available on the value versions for $545.

Also, Chrysler has added a driver-side air bag as a safety feature in its minivans.

The Pontiac video compares Trans Sport to competitive minivans, with a special emphasis on Chrysler products.

The Pontiac mailings include a $500 certificate that can be used toward the purchase of a 1991 Trans Sport through July 31.

Mike Kelley, Chrysler Corp. sales promotion manager, said videos are yet another dimension of telling the Chrysler minivan story. He said these videocassettes cost 75 percent less than regular videocassettes, "allowing us to be more competitive."



AUTOMOTIVE NEWS / DAVID L. BURHANS

"Demographically, it is our mainstream audience who have VCRs. We did a cross match. We're about 90 percent accurate."

Kelley said all but 25,000 videos were sent to current minivan owners whom Chrysler believes will be in the market for a new minivan in the next six months to a year, based on a study of their previous buying habits.

The remaining 25,000 were sent to a group Chrysler dubs "minivan intenders" — people who fit the demographic profile of previous first-time minivan buyers in terms of age, number and ages of children, residence and income.

Kelley said members of the group are in their late 20s to early 30s, married and have household incomes of $25,000 to $35,000.

Chrysler's mailing also includes a letter from Chrysler Chairman Lee Iacocca inviting consumers to stop by and take a look at Chrysler's minivans and a certificate that, when validated by a dealer, is good for a free "Rediscover America Road Atlas."

EUROPEANS

FROM PAGE 3

he said.

And he said Mercedes has never offered dealer incentives for an entire model year or calendar year. But he acknowledged that Mercedes is having to support its dealers "beyond what we thought we might have to do. I think the unique times called for it."

He said it's important for the Mercedes image to direct its incentives to its dealers rather than its retail customers. "Everything we do has to be commensurate with our image," Jackson said.

Sterling Motor Cars was among the first of the European luxury importers to offer a customer rebate. It happened a couple years ago and, at $5,000, it was a big one. However, Sterling discontinued its customer rebates after the 1990 model year began, and it now prefers to support dealers less publicly, said Michael Jackling, vice president of marketing and sales.

According to Jacobs Automotive, Sterling in recent months offered its dealers a wide range of financial support, including floorplan help and subsidized trade-ins, in addition to dealer cash and no-money-down leases. Those programs have expired.

Jackling said contests for salespersons are also a cost-effective way to get them to keep Sterling in mind, which is a concern for most importers, since they're usually dualed with other brands.

Susan Jacobs of Jacobs Automotive said dealers can use the manufacturers' money in many ways.

With the market this tough, she said, "it's safe to assume that most of the money is being used to move as many cars as possible."

Daewoo expects Canada sales rise

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — Daewoo Motor Co. is anticipating improved sales of its LeMans subcompact in Canada this fall when it renames the car and moves from 70 dealers to nearly 470.

Distribution of the car is being transferred to Pontiac-Buick-GMC dealers during an overhaul of GM's Passport dealer network, which has been selling the car as a Daewoo Optima.

With the changeover, Daewoo will have access to Canada's 467 Pontiac-Buick-GMC dealers.

Daewoo didn't hide its dissatisfaction with Passport's sales performance. Daewoo believed Passport's limited dealer network was the chief reason for slow Canadian sales of the LeMans. In 1990, Daewoo shipped 2,302 units to Canada, up from 1,832 in 1989.

Daewoo expects to ship 12,000 units to Canada annually. "It could be larger than that," said a Daewoo Motor executive.

This will make Canada Daewoo's second largest market after the United States, where 39,081 Pontiac LeMans were sold last year.

The 1992 LeMans will bow early this fall. The model will feature some slight "cosmetic changes" for a more sporty look, according to the executive.

NHTSA launches inquiry on cause of Excel fires

The Associated Press

WASHINGTON — Federal investigators will take a closer look at 1986-89 Hyundai Excels to find the cause of engine fires that have prompted dozens of complaints.

The National Highway Traffic Safety Administration has received reports of 49 fires in the Korean-made cars. An estimated 837,000 are on the road in the United States.

The agency opened a preliminary investigation into the problem in January.

Now that the investigation has been upgraded, actual parts will be studied for defects. NHTSA could eventually order a recall.

NHTSA engineers believe the problem is linked to a pipe that links the air cleaner to the catalytic converter, said spokesman Tim Hurd. When valves in the pipe malfunction, exhaust gases can ignite flammable materials around the air cleaner.

"Our engineers our working on the theory that that's what is happening," Hurd said. No firm conclusion, however, has been reached.

The agency also has begun these preliminary investigations:

- Loose steering wheels in the Buick Regal, Oldsmobile Cutlass, Chevrolet Lumina and Pontiac Grand Prix, beginning with models built in the 1987 calendar year. There has been one complaint of a wheel coming unfastened.
- Gasoline leaks in 1987 Dodge Omni, Plymouth Horizon, Dodge Charger and Plymouth Turismo models. There have been 17 complaints of leaks from a reservoir connected to the mechanical fuel pump. The pump has been replaced with an electrical pump on later models.

There are an estimated 288,800 of the cars on the road.

- Failure of anti-lock brakes in 1988-91 Ford Econline vans and F-150, F-250 and F-350 pickups. There have been 20 complaints, blaming the problem for 14 accidents and seven injuries.
- Faulty headlights in the 1987-88 Ford Mustang. There have been 13 complaints of the lights flickering when the fog lights are illuminated. An estimated 338,710 cars are on the road.
- Unexpected power surges in the 1991 Dodge Spirit and Plymouth Acclaim. There have been six complaints that the engine suddenly begins racing; one case allegedly caused an accident. An estimated 83,000 cars are in use.

NHTSA also discontinued several preliminary investigations after finding no evidence of widespread defects.

The canceled investigations involved:

- Unstable engine idling in the 1990 Volkswagen Jetta
- Breaking door handles in the 1986-88 Ford Taurus and Mercury Sable
- Sliding door hinge failure in the 1990 Chevrolet-Astro van
- Broken lug nuts in the 1986-89 Isuzu Trooper II.

Walkout shuts GM van plant

By Bob DeMayer
SPECIAL CORRESPONDENT

Production came to a halt last Monday at the General Motors minivan plant in Baltimore when 3,200 assembly line workers walked out, claiming layoffs have made the plant unsafe because there is no time for the workers to take breaks.

The UAW said 400 people were laid off in February, resulting in dangerous conditions for those still working. The union also said the company is unfairly restricting vacations.

Although the number of Chevrolet Astro and GMC Safari minivans produced per hour has been reduced from 47 to 42 since the layoffs, UAW Local 239 President Rodney Trump said about 300 workers have reported injuries since February, a tenfold increase from before the layoffs.

"We're just asking GM to recognize basic human rights, which is difficult for them," Trump said.

Negotiations to end the walkout will resume today.

U.S. carmakers scheduled 121,904 units last week, 3.93 percent above the preceding week but 12.64 percent below the year-ago week.

Year-to-date, U.S. car production is 2,749,346, down 13.85 percent from 1990.

Truckmakers planned to build 84,609 units last week, 3.00 percent below the prior week and 8.67 percent below the comparable week last year.

GM scheduled one shift of overtime last Saturday at its Detroit truck plant and two shifts of overtime at car plants in Arlington, Texas; Fairfax, Kan.; Willow Run, Mich., and Wilmington, Del. All GM and Chrysler Corp. plants will be closed July 4 in observance of Independence Day.

All Ford Motor Co. plants except Kentucky Truck in Louisville are down this week and next week for vacation. Kentucky Truck was closed for two weeks of vacation in June.

Chrysler's St. Louis (No. 2) truck plant worked two shifts of Saturday overtime.

The plant produces the Chrysler Town and Country, Dodge Caravan C/V, Dodge Grand Caravan and Plymouth Grand Voyager.

CANADA: Canadian car production was estimated at 25,153 last week, down 11.61 percent from the prior week and down 25.40 percent from the year-ago week.

Truck production last week was estimated at 18,352, down 14.05 percent from the prior week and 15.89 percent below the year-ago week.

The Associated Press contributed to this report.

SAAB

$50,000 luxury flagship axed

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

TROLLHATTAN, Sweden — Saab Automobile AB has canceled plans to build a new rear-wheel-drive luxury flagship that would have extended the Swedish carmaker into the $50,000 class.

The decision, reached two weeks ago, is a clear sign of Saab's product strategy for the 1990s. It underscores the company's determination to maintain its own brand character in the giant shadow of General Motors, which owns half of it.

The top-of-the-line model, code-named 108, would have made Saab a three car-line company and put it in direct competition with the likes of BMW's 7-series sedan — well beyond the reach of the front-wheel-drive 900 and 9000 models and their replacements.

Project 108 had been a central element of Saab's revised product strategy since GM acquired half of Saab-

Big 3: from adversaries to allies

Cooperation, once unthinkable, now OK to hit common goals

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 are fast becoming the Three Musketeers. Beset with a host of common problems, they are entering a new era of "all for one and one for all" that represents a fundamental change in their relationships from adversaries to allies.

Until three years ago, General Motors, Ford Motor Co. and Chrysler Corp. mostly worked at cross purposes. In 1979, when Chrysler was struggling for survival and trying to put together a federal bailout package, then GM Chairman Thomas A. Murphy publicly opposed federal aid for Chrysler.

But times have changed. In the last decade, offshore competition has eroded the Big 3's sales, market share and profitability, forcing them to reassess their business practices.

"The industry has traditionally been concerned about doing anything that would provoke antitrust," said David Cole, director of the Office for the Study of Automotive Transportation at the University of Michigan.

"Today, with the signals coming from Washington, the attitude is, 'This is more or less the system, and if they don't like it they can tell us about it,' " Cole added.

CAPITAL CITIES/ABC INC.

Big 3 chairmen appeared on ABC's "Nightline" last month in an unprecedented gathering for TV and for the auto industry. From left are host Ted Koppel, GM's Robert Stempel, Ford's Harold Poling and Chrysler's Lee Iacocca.

Philosophically, GM, Ford and Chrysler decided they could cooperate and compete.

Dugald Campbell, a vice president at Siemens Automotive in Auburn Hills, Mich., has even coined the word "co-opetition" to describe the phenomenon.

Beginning with a major cooperative research effort in 1988, the Big 3 have now struck up five such agreements. Chrysler and GM also have set up a joint manufacturing venture.

In recent months, Detroit carmakers also have filed a common dumping charge against Japanese minivan manufacturers. They hosted a visit by a congressional contingent, and their chief executives appeared together on ABC's "Nightline" program.

"These guys would not be sitting together on the Ted Koppel show unless they had a cooperative feeling," Cole said. "Their view is, it's not a sin to have 'co-opetition.' In fact, it's a good thing."

Chrysler's Francois J. Castaing, vice president of vehicle engineering; Ford's John P. McTague, vice president of research and GM's Gary W. Dickinson, vice president and group executive in charge of the technical staffs, meet about once a month for breakfast or dinner in the Detroit area to discuss how current projects are progressing and possible future projects.

The Big 3 believe the new attitude of cooperation parallels but doesn't go as far as what Japanese makers have done for years.

"We're doing a long list of things," said Castaing. "A lot is happening. It's based on mutual trust. Antitrust law precludes us

FRANKFURT — As traditional buyers of Europe's prestige brands develop an eye for Japanese cars, European product planners have turned their sights toward pleasing U.S. customers.

Europe's equip-'em-and-ship-'em attitude toward America is changing. The Japanese luxury entries were designed with U.S. buyers in mind; now, the Europeans have begun to cater to overseas tastes as well.

For example, the impetus for the new Mercedes 400E that arrives in the United States this fall came largely from Mercedes-Benz of North America Inc. And in a break with custom, the U.S. market will get the car first. The new mid-range Mercedes V-8 won't reach European dealers until the end of next year.

Moreover, a small SL based on the 190 successor — considered one of the most promising models in the Mercedes pipeline — is aimed directly at the United States.

In another U.S.-oriented move, Porsche will offer its Tiptronic automatic/manual transmission on the new four-cylinder 968. The Tiptronic-outfitted 968 convertible is expected to boost U.S. volume considerably beginning next year.

And if a new Rover MG is ever built, it will be because America wants and needs it.

In addition, auto shows in the United States —

Lamborghini is said to be readying this Marcello Gandini-designed replacement for the Jalpa, to be powered by a 320-horsepower V-10 engine.

June sales drop 9.7%, but outlook is brighter

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

New-vehicle sales took another baby step forward in June, but they still fell 9.7 percent short of the 1990 total.

Manufacturers and importers sold 1,158,882 new cars and trucks, about 2,000 more than in May, but an increase of almost 41 percent over January.

From a percentage standpoint, truck sales declined less than car sales in June, dropping 9.3 percent to 387,344. Car sales dipped 10 percent, to 771,538.

It was the second consecutive month that car-truck sales have increased. They trailed 1990's weak totals each month, but the year-to-year deficit fell from 12.6 percent in May to 9.7 percent in June.

Tom Webb, chief economist for the National Automobile Dealers Association, said he was was encouraged by the sales recovery that has been under way for more than a month, saying "it's actually beginning to pick up a little steam."

He said the seasonally adjusted selling rate in late June appears to have been one of the best in nearly nine months.

The 1991 six-month tally for total vehicle sales was 6,179,000 (preliminary figure), down 14.8 percent from a year ago. January-through-May sales were down 15.9 percent, thus the industry is reduc-

Logic's fuzzy for new 929 but cruise control isn't

By William R. Diem
ASSISTANT MANAGING EDITOR

Mazda Motor Corp. will introduce a new form of cruise control this fall that exhibits less busyness in searching for the right gear and throttle opening.

The device, offered as standard on the 1992-model 929 luxury sedan set for introduction in September, has been nominated for a technological innovation award by *Discover* magazine. (See Briefly, Page 2.)

The cruise control device employs fuzzy logic, a form of artificial intelligence that lets a computer make decisions in shades of gray instead of black and white.

A typical cruise control system will downshift a four-speed automatic transmission when speed drops by 5 mph, as on a hill, and upshift 20 seconds later. That can result in a downshift just as the crest of a hill is reached, or constant gear shifting on a long grade.

The system's four-bit computer chip monitors speed and throttle opening. It downshifts when the hill has slowed the car sufficiently, then checks the throttle opening when speed has been regained. If the throttle is still open, indicating acceleration, the cruise control keeps the transmission in the lower gear. If the throttle has closed sufficiently, the hill has been crested and the transmission is allowed to shift back to fourth.

Chevy lists rules for demo use; Mom, spouse, kids don't qualify

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet dealers can't give demonstrator cars to their 84-year-old mothers and expect to get incentive money, too.

That's not new policy, but Chevrolet's Robert Starr, general sales and service manager, sent a letter last month to his 4,750 dealers restating the division's dealer-owned demo policy.

"I think it stinks, and I'll continue to do what I've done all along," said a dealer who asked not to be named. "My wife, my mother and myself have demos, but we all work here. If they catch me, I guess it will cost me some money."

The June 3 letter included two new regulations with which dealers must comply, said Ron Sobrero, Chevrolet assistant general sales manager.

Dealers now must sell the cars before they are driven 7,500 miles, and they must maintain a demonstrator activity log and keep it two years in case a vehicle's use is questioned by company auditors, Sobrero said.

Demos meeting those and other conditions qualify for divisional incentives and allowance programs when the demos are sold at retail. Such allowances include those for first-time buyers and college graduates; special finance or lease rate support; consumer, dealer and salesperson incentives, and model closeouts.

Dealers who received the letter agreed that the basic demo car policy seemed unchanged, although many want to use demos for themselves and their immediate families. Many dealers believe demos should be on the road as a rolling advertisement for Chevrolet, regardless of whether it is a family member using the vehicle.

Conditions that would make a demo ineligible for allowances include use by dealers, family members, employees and persons doing

Slow sales of Hyundai Sonata take luster off Quebec plant

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

BROMONT, Quebec — More than two years after launching its $400-million Sonata plant, Hyundai Motor Co. is still hobbled by disappointing sales and an oversized factory the company isn't sure what to do with.

Sonata sales are running at about one-third of forecasted levels, and the Bromont plant is operating at about one-third of its 100,000-unit annual capacity.

Hyundai officials say solutions include selling Bromont cars to Chrysler Corp. or introducing a second product to the factory. More Sonata sales would help, too. But Hyundai sold 34,698 Sonatas in the United States in 1989 and only 29,840 last year.

Sonata tweaked for 1992, Page 43

"I don't know why it doesn't sell better," admits Hai Chang Lee, director of Hyundai's American export operations in Seoul. "It is the best car in the market in value. But the customer's perception is that it's not a good car. I really don't know why that is."

One problem is stiff competition in Sonata's class, which includes the Toyota Camry, Honda Accord and Ford Taurus. Nor does it help that ratings from all Hyundai nameplates put Hyundai next to last among makes in J.D. Power and Associates' 1991 initial quality survey.

More than two years after opening, the $400-million Bromont, Quebec, plant is operating at about a third of its annual capacity of 100,000 units. Hyundai is considering introducing a second product to the factory.

Lee says the company is even considering changing the name "Sonata" as a way to ignite new sales.

The disappointment complicates the carmaker's aggressive North American manufacturing outlook. Few companies with Hyundai's relatively low sales volume would have opted to build an overseas factory without the promise of fairly rapid growth.

Hyundai decided to build the plant shortly after it burst onto the U.S. market in 1986, selling 263,000 Excel subcompacts in its first full year on the market. The Sonata, Hyundai's first attempt at an intermediate car, looked like a sure bet.

But Hyundai's U.S. sales totaled only 137,00 last year, and the Canadian plant is producing half the 60,000 cars a year it needs to break even. Last year, the company sold 6,672 Bromont-built Sonatas in Canada.

Given the current situation, says Mark Juhn, executive vice president of Hyundai Motor America, the 60,000-mark could still be two or three years away. Plans to add a second car to bolster the plant are still under discussion, as are plans

Mark Vandevelde, second from right, confers with a fellow American during a purchasing department meeting.

UNDERSTUDY: *Honda of America grooms handpicked employees in Japan*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — When he was preparing to leave the United States, Mark Vandevelde recalls that a family friend warned him: "Don't lose your Yankee values."

But Vandevelde, a 27-year-old Honda of America Manufacturing Inc. engineer who will spend the next three years studying Japanese and Japanese business practices with Honda in Japan, isn't worried that the experience will make him less of an American.

"You don't have to become Japanese" to succeed at a Japanese company, Vandevelde said in a recent interview. The Japanese, he points out, work in the United States without becoming Americans in the process.

"But you do need to understand the culture you're doing business in," he says.

Vandevelde is one of 18 engineers from Honda's American and Canadian operations who will spend two to three years working at Honda plants in Japan.

Later this year, 14 more will join the program. Each year, a new group will be added to learn such things as how Honda deals with suppliers in Japan and how new product development is handled.

Eventually, it is hoped, the returnees can apply what they have learned in Japan to their jobs in North America.

In part, the program is an attempt by Honda to answer criticism that it has been too slow in promoting Americans to top management in its U.S. operations and that it is still overly reliant on Japanese engineers at its Marysville, Ohio, plant — even after 10 years of operating there.

According to Toshiharu Ohashi general manager of the North America production task division, the transfer program will lead to faster promotion for American employees. "It is part of the need to establish self-reliant operations in North America," he says.

A Honda spokesman says that as the North Americans acquire

Corrections

- A story in the July 1 issue should have said the EPA has told Vector Aeromotive Corp. that its V-8 supercar has passed emissions tests, but paperwork must be finished before the car is certified.
- Production of the 1992 Oldsmobile Achieva, the replacement for the Cutlass Calais, is slated to start Oct. 29. A July 1 issue story reported an incorrect date based on information from the division.

Japan's sales slide 8.3% during June, 4.1% in first half

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — New-vehicle sales, weighed down by a 17.5 percent slide in the biggest market segment, fell 8.3 percent in June from a year earlier despite continuing strong demand for luxury cars, the Japan Automobile Dealers Association reported last week.

The industry group attributed the June weakness to the introduction of tough new regulations that require all new-car owners to show certified proof of parking space, and to continuing high interest rates on car loans.

But with the exception of an uptick in April, the market's downturn, to 492,425 units in June, has continued unabated since November. The figures exclude sales of mini-vehicles, those under 660 cc in engine displacement, which are compiled separately.

The June decline was magnified by a 17.5 percent plunge in sales of cars below 2 liters in engine displacement -- the biggest segment in Japan — to 287,431 units. Demand for luxury cars continued strong, however, rising 39.2 percent last month, to 56,180 units.

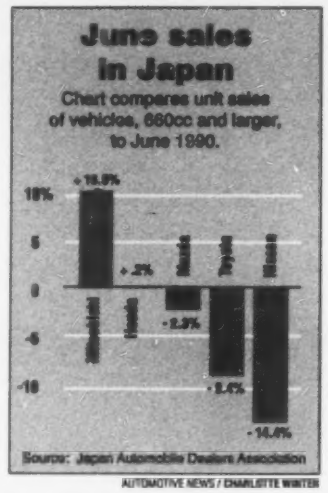
Imports, most of which are grouped in the large-car segment, fell for the sixth consecutive month in June, down 20 percent from a year earlier, to 17,805 units.

Many analysts have attributed the weaker demand for imports to a lack of new models. But Neal Doying, who follows the industry for Baring Securities Ltd. in Tokyo, says the continuing drop may reflect something more basic.

"They have an image of wealth, and with the economy slowing down, people are taking a second look," he said.

Most companies reported lower June sales. Toyota Motor Corp. fell 9.4 percent, to 203,810 units; Nissan Motor Co. fell 14.4 percent, to 107,608; Mazda Motor Corp. slipped 2.3 percent, to 41,813.

But Honda Motor Co. managed a 0.2 percent increase, to 42,894 units, while Mitsubishi Motors Corp. again posted a strong monthly gain, rising 10.5 percent, to 42,156.



AUTOMOTIVE NEWS / CHARLOTTE WINTER

Sales for the six months were down 4.1 percent, to 2.93 million units. Most companies still expect an upturn during the second half, when a number of new models will be introduced.

Meanwhile, according to preliminary figures, mini sales fell 9 percent last month, to 167,181 units, marking the second straight month of decline.

Analysts said the new garage law, which now covers minicars in the major cities for the first time, is expected to hit sales in the segment especially hard.

Perky VW program offers credit cards to owners

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Volkswagen United States Inc. wants to give its customers credit and a whole lot more.

So it created "Club Fahrvergnugen," a two-month-old program that makes owners of VW vehicles eligible for discounts on travel and merchandise and gives them the opportunity to apply for Visa credit cards and other perks.

In May, 200,000 people who bought VW vehicles in the last two years were notified that they had been automatically enrolled in the program. By mid-July, the program will be extended to another 1.8 million VW owners.

The program is an extension of VW's *fahrvergnugen* marketing campaign. It is a way of giving customers a value-added perk for doing business with VW, said Mike Gladchun, manager of merchandising for VW United States.

VW and its upscale sister division, Audi, have not offered factory-to-customer cash rebates for about a year. Audi is not offering a similar program.

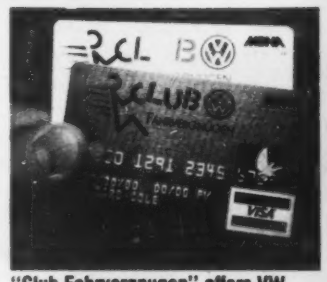
"We're trying to get to the lifestyle of our owners," said Gladchun. "Our owners are expecting a different ownership experience."

Under agreements with VW, several firms have agreed to sell their products and services at a discount to club members, he said.

For instance, club members can save 15 to 35 percent on Carnival Cruiseline cruises, up to $100 on airfare on Northwest Airlines, up to 30 percent on Sony merchandise and up to 15 percent on merchandise ordered from Sharper Image, a mail-order catalog firm.

Also, there is an agreement with Holiday Inns that gives club members complimentary memberships in the hotel chain's "frequent stayer" program, which entitles members to room upgrades and special rates.

Club members are not automatically eligible for the credit card, but are invited to apply for it.



"Club Fahrvergnugen" offers VW owners credit cards and other perks.

The Visa credit card issued under the program is an "affinity" card, which means VW will not issue the card directly and will not own the receivables. The issuer is MBNA America Bank, a Wilmington, Del., financial institution.

A more prestigious "gold" card carries a higher line of credit and other amenities not available to holders of the standard credit card. Neither the standard card nor the gold card requires an annual fee the first year, and both cards bear the "Club Fahrvergnugen" name.

Gladchun said the average Volkswagen owner is about 31 or 32. He expects many young, first-time buyers who are employed and do not have a negative credit history to obtain credit cards through Club Fahrvergnugen.

"Our position is that these people have been solid enough to be financed to buy a car," he said.

The card offers no finance charge on purchases if the balance is paid in full each month; a 90-day protection plan against accidents and theft; and a plan that doubles the regular repair warranty to up to a year on any purchased merchandise.

Card holders who use the card to purchase goods and services will receive a year-end credit equaling 3 percent of those purchases.

Additionally, each time a purchase is made using the credit card, the member is entered in a sweepstakes in which the grand prize is a 1992 VW Passat and second prize is a 53-inch Sony television. The prizes will be awarded in January 1992.

'92 Civic exposed!

Here's the first look at Honda's new 1992 Civic. Three- and four-door models bow this fall, powered by 1.3-liter sohc and 1.5-liter dohc engines. A two-door notchback price-leader version is likely for next spring.

Orbital orders equipment for late-1993 production start

By David Barkholz
CRAIN NEWS SERVICE

Orbital Engine Co. USA says it has begun placing orders for equipment that would allow it to start building its two-stroke engine by late 1993.

Orbital USA will spend $75 million to $100 million to make 100,000 engines for industrial, marine and automotive uses, said Orbital President William Kaska.

The company plans to begin production in October 1993, then build up to 100,000 units over the next few months, Kaska said.

Orbital, based in Tecumseh, Mich., has recently been the focus of an environmental campaign to raise corporate average fuel economy standards.

A Washington consultant has been working with Orbital officials to push Orbital technology as the key to huge fuel-economy gains. The campaign to portray the Big 3 as foot-draggers in technology has been done quietly in an attempt not to alienate Orbital's two main American customers, General Motors and Ford Motor Co. The automakers both have licenses to work with Orbital designs.

Kaska declined to identify Orbital's customers for the engines it plans to produce. But he said the company has commitments from more than one customer to go forward with the investment in production equipment.

Initially, most of the engines produced will be used in automobiles, Kaska said.

A report last month in a metalworking newsletter said Orbital would supply three-cylinder engines from Tecumseh to Ford of Europe for use in small Ford vehicles there beginning in 1993. Kaska declined to comment on the report, but a Ford spokesman said the company is still evaluating the engine and has not made a commitment.

The main roadblock to using Orbital or other two-stroke engines is the quality of tailpipe emissions over the life of a vehicle.

Orbital USA is the America subsidiary of Australian Ralph Sarich's Orbital Engine Co. Pty. Ltd. The Orbital technology promises an engine-aspiration system that would solve the emissions problem while providing all the advantages of a two-stroke's small size, light weight and mechanical efficiency.

Ian MacPherson, director of the powertrain research laboratory at Ford Motor Co., told *Automotive News* several months ago that Orbital would likely build the "pilot vehicle" engines for a European two-stroke effort. MacPherson added that it wouldn't make sense for Ford to invest in an engine plant to build "probably less than 10,000" units.

"It could be a few thousand or even just a few hundred," McPherson said then.

Ford and GM officials have declined comment on Orbital's campaign to get environmental groups to insist on a much higher CAFE. The campaign was revealed last month by *Automotive News* and its sister publication, *Crain's Detroit Business*.

Kaska said Orbital USA has begun placing orders for machining centers and tooling and expects to employ 300 by the time it reaches full production in 1994.

That number is down significantly from the 1,900 employees anticipated for 1992 by state of Michigan officials who lured Orbital USA to Tecumseh, located southwest of Detroit, in 1989.

The company's production timetable has changed, Kaska said, though he added that Orbital USA is negotiating with a number of potential engine users for an additional 250,000 annual units.

Kaska declined to identify the prospective customers.

Crain's Detroit Business and *Automotive News* reported last month that a Washington-based investment firm involved with Orbital had begun enlisting environmental groups in the congressional fight for higher CAFE.

The actions by the firm, Government Investment Management Corp., are controversial because Orbital's key U.S. customers, Ford and GM, oppose an increase from the current 27.5 mpg.

Government Investment has promoted Orbital's two-stroke engine to environmentalists as the most fuel-efficient in the nation. But engineers for Ford and GM caution that it has yet to be proven capable of meeting U.S. emission standards over 10 years or 100,000 miles.

Chrysler Corp. is developing its own two-stroke engine and is not an Orbital licensee.

Government Investment would like environmentalists to interject discussion of the Orbital engine into Congressional debate in hopes of resuscitating waning legislative support for a big CAFE hike, internal Orbital memos show.

Orbital USA is looking at selling stock in the United States on one of the three major equity exchanges. Its parent company in Perth, Australia, already offers some shares of Orbital in America through the less-visible "pink sheets" of the National Association of Securities Dealers Automated Quotations system.

Kaska said Orbital USA's investment in Tecumseh could reach $230 million to $250 million, if it can secure contracts for an additional 250,000 engines above the 100,000 units already slated.

He said employment in Tecumseh will double over the next year to about 60 people as the company gears up for production.

12 top world producers

	1990	1989	Pct. of change
General Motors	7,451,000	7,905,000	– 5.74
Ford Motor Co.	5,872,389	6,408,044	– 8.36
Toyota Motor Corp.	4,889,414	4,447,889	+ 9.93
Nissan Motor Co.	3,063,186	3,008,750	+ 1.81
Volkswagen AS	3,057,598	2,927,000	+ 4.46
Peugeot-Citroen PSA	2,194,300	2,216,100	– 0.96
Fiat Group	2,162,900	2,436,100	–11.21

Renault SA	1,843,429	2,049,600	–10.05
Mazda Motor Corp.	1,607,054	1,488,807	+ 7.94
Mitsubishi Motor Corp.	1,332,938	1,249,510	+ 6.68
TOTAL	37,451,541	38,381,512	– 2.42

Note: No breakout of knock-down vehicles is available from manufacturers. All figures include cars, trucks and buses. Some totals include factory sales.
SOURCE: Automotive News Data Center

GLOBAL TALLY FINDS OUTPUT DIPS 2.42%

The world's major vehicle builders last year produced 2.42 percent fewer units as output slipped to 37,451,541 units from the 38,381,512 built a year earlier.

A global survey by *Automotive News* showed there were just a few changes in rankings among the top 12 vehicle makers. While the five largest producers did not change in standings, Peugeot-Citroen PSA of France moved from eighth into the sixth highest spot, pushing Italy's Fiat Group to the seventh position.

Honda Motor Co., Japan, moved up from tenth to close 1990 as the world's eighth largest vehicle maker, replacing Peugeot-Citroen. France's Renault SA slipped to tenth from ninth in the list of rankings by production totals.

Chrysler's production moved that U.S. company down the list to ninth from seventh position.

This table showing production totals for the world's 12 top vehicle builders usually runs in the *Automotive News Market Data Book*. It was omitted inadvertently in the 1991 edition.

SCHEME TO SLASH COST OF STEEL KEEPS THE SCRAP

Steel companies and the federal government are partnering in an effort to make steel directly from scrap and iron ore and to cut production cost $10 to $25 a ton.

Since steel is the most abundant material in cars and trucks, implications are enormous for automakers.

The technology would eliminate coke ovens, which are expensive and dirty, as well as blast furnaces and basic oxygen furnaces. The process would reduce energy consumed in steel making by 20 percent and, the partners hope, put the United States a step ahead of foreign competition.

The four-year, $45 million project is under way chiefly in a pilot plant at a leased USX Corp. facility at Universal, Penn., with about $10 million funded by the American Iron and Steel Institute and $35 million by the Department of Energy. International Business Machines Corp. loaned a $1 million computer system.

The process directly converts a form of iron into high-carbon liquid steel described by researchers as "a product somewhere between today's conventional iron and steel." Liquid metal is treated with oxygen to reduce carbon content, then the steel is continuously strip cast into hot-rolled coils.

When fully operational next year, the pilot plant is expected to have capacity of around 120 tons per day.

During the last 10 years, production costs of American-made steel have dropped about 30 percent as labor, energy and cost of raw materials per ton of finished product were reduced. Milton Deaner, president of the institute, says, "Equally important, the quality of that finished product is higher than ever."

During a visit to pilot plant, William Jolley, general manager of technology-quality assurance for Bethlehem Steel Corp. of Bethlehem, Pa., put the steel industry's plant closings, liquidations and financial losses into perspective.

"Adverse circumstances in the 1980s forced curtailment of many industry activities," he said, "but the industry has compensated for this to a large extent by extensive collaborative and cooperative research on generic industry problems and opportunities."

Ian Hughes, vice president of technology for Inland Steel Flat Products Co., said he envisions a steel plant producing the next generation of cold-rolled sheet steel through an almost continuous process with production time slashed to as few as 10 hours from the current six weeks.

The pilot plant, fired up a year ago, conducts experiments daily and operates two or three days a week with a staff of about 12.

While there are several direct-steel-making projects around the world, only one, in South Africa, is in production. None is continuous or uses scrap as the U.S. mill will, according to the institute.

In the United States, where 66 percent of steel produced is recycled, electricity represents a significant portion of steel making cost. The steel industry accounts for 8 percent of industrial electrical power use and energy.

MAKERS CAST AROUND FOR LIGHTWEIGHT COMPONENTS

Since the early 1980s, intensified interest in lightweight materials for autos, coupled with improvements in die-casting processes, have significantly increased the size of the die-casting industry, pushing the metal's consumption to an average annual growth rate of 9 percent.

Meanwhile, molded plastics that could replace the metal parts have increased faster, with engineering thermoplastics growing 12 percent annually since 1971, according to plastics industry estimates.

Last year in North America, die castings of lightweight metals represented a market topping 1 million tons. A big part of it, currently $5 billion in automotive, industrial equipment and appliance parts, is said to be susceptible to replacement by high-performance plastics, according to Boston's Charles River Associates, a materials and economics consulting firm.

On one hand, plastics have advantages in many applications, including light weight, corrosion and chemical resistance, sound dampening, parts consolidation, design flexibility, vibration dampening and lower finishing costs. On the other, die-cast metals have superior temperature resistance, shielding properties and other performance advantages.

A case in point is the engine intake manifold. It can be formed either from die-cast metals or plastics and represents a large market opportunity for both types of materials.

According to a new report by Charles Rivers Associates, lost-core injection molding, traditional injection and compression molding are all competing with die casting for this market with potential global sales volume of over $600 million.

Says CRA: "Die-cast parts made primarily from aluminum, zinc and magnesium are valued for their high strength-to-weight ratios. However, because the average price of these castings is over $4.80 per kilogram, they are a target for several high-strength, low-cost plastics and processes: thermoset and thermoplastic blow-molding compound; stampable thermoplastic composites; injection molded thermoplastics; long fiberglass-reinforced thermoplastics; lose-core molded thermoplastics and thermosets; sheet molding compound; resin transfer molding; and structural resin injection molding.

SENSOR MARKET ACCELERATES

Demand for automotive sensors in the United States and Japan is forecast to increase from 176 millions ($1.7 billion) to 386 million units ($2.8 billion) in the 1990 to 1985 time period, according to BIS Strategic Decisions of Luton, England, advisors on electronics information.

The U.S. automotive sensor market will show a 15.4 percent compound annual growth rate in unit demand, while Japan grows by 10 percent.

For both geographic regions, the major share of the market will be for speed and position sensors which are featured in most automotive electronic control systems, such as anti-lock braking and electronically controlled transmissions, says BIS, with the driving force being safety legislation and increased concern over fuel economy.

However, BIS predicts the sensor market showing the biggest increase in the 1990 to 1995 period will be accelerometers, dictated by the rapid growth of air-bag systems and the increased use of knock control in fully integrated engine-management systems.

In the United States, BIS says, demand for accelerometers will rise from 9 million units ($83 million) to 29 million units ($269 million) between 1990 to 1995, a compound annual growth rate of 22 percent in both units and dollars. Market demand in Japan will rise from 6 million units ($64 million) in 1990 to 22 million units ($220 million) in 1995.

JIGGERS, IT'S THE COLOR COPS

They don't carry badges, but specialists from Du Pont could easily be dubbed the "Color Police."

Last year company color specialists inspected more than 1,800 vehicles at factories, dealerships and points of entry. Their assignment is to make sure the exact color formulas are available to repair shops when vehicles require refinishing.

"Vehicles differ slightly in color from plant to plant and model to model," said Gerry Brosmer, product specialist for the company's Detroit Refinish Color Group. "So we constantly verify actual new car finishes after they come off the assembly line. If a color shift is found, we reposition the color so the paint can be easily blended."

The Du Pont library has more than 60,000 mix formulas to match virtually any OEM paint color.

Colors are developed at centers in Troy, Mich., Canada and Europe. The company also runs a Field Verified Color program to monitor and change paint formulations annually or as necessary throughout the model year.

A Mobile Color Laboratory also is used in the effort. Specialists use the lab's mixing machines, spraying area, drying oven and environmental panel testing area on sample roofs to test paint colors.

Changes in formulations are sent out via the company's ColorNet computer system and on microfiche.

DuPont color specialists examine vehicles to ensure the exact color formulas are available to repair shops when vehicles require refinishing.

Service Soothsayers

Dealership managers foresee upturn for auto market in the next two years

By: Al Fleming

In the late 1980s they predicted an auto-market downturn was coming, and they were right. Now we'll see how good they are at forecasting an upturn.

For the first time in four years, the nation's auto dealership service managers are voicing strong optimism about the outlook for the U.S. automobile business.

In an *Automotive News* survey taken in May, 62 percent of service managers polled said they expect the market will improve in the next two years. That's up from 36 percent a year ago, 34 percent in 1989, 44 percent in 1988 and 50 percent in 1987.

They're even more bullish about their local operations, 77 percent saying they expect business at their dealerships to improve in the next two years.

The majority of those surveyed indicated they believe the new-vehicle market has bottomed out, and they expect an upturn in the general economy and rising consumer confidence will boost new-vehicle sales through 1993.

Also on the positive side, more than 95 percent of survey participants said they feel their service departments offer a potential for higher profits in the future. Among the reasons cited are better cost controls and operating efficiencies, extended hours of operation, fewer but bigger dealerships and improvements in customer satisfaction.

However, more than one out of four (27 percent) said they would like to see their dealerships spend more on advertising and promoting service operations. These service managers expressed concern that their dealerships are going overboard on hyping new-vehicle sales, while not doing enough to attract new service customers, particularly at a time when competition is rising.

A continuing concern of backshop bosses is finding and hiring competent technicians.

More than half (54 percent) of those surveyed said it is tougher finding skilled help this year than last year. On the plus side, that percentage has dropped from previous years (67 percent in 1990, 71 percent in 1989 and 1988), because of better training programs and the fact that dealership failures have made more mechanics available for jobs.

By far, engine and brake work remain the biggest revenue generators: Performance is a priority. New-car warranty work continues to climb as a significant profit contributor. It's now at its highest level with nearly 43 percent of respondents labeling it "significant."

Extended service contract profitability is waning, dropping below 20 percent as a significant contributor this year from over 31 percent in 1990 and as as high as 36 percent in 1988.

Meantime, profits on general customer drive-in (77 percent say it is a significant profit contributor) and special service packages (55 percent) continue to be major profit contributors.

Asked if 1991-model cars are more difficult or more profitable to service than those of previous years, the respondents answered similarly to previous years. Only 11 percent said the current crop is more profitable. The reasons most cited: longer basic warranty periods, more expanded parts warranties, greater reliability and durability of new cars with fewer maintenance requirements and longer service intervals.

Some 42 percent said 1991 models are harder to work on, compared to 48 percent in 1990, 37 percent in 1989 and 40 percent in 1988.

In any case, business seems to be good if measured by store

our dealers' service departments have never faced stiffer competition:

Quick oil change and tune-up shops are taking away business that dealer service departments once thrived on.

R.L. Polk's Automotive Marketing Services Division can help you help your dealerships recapture some of that business. As specialists in this area, we can design, produce and execute a direct marketing program that creates qualified service department traffic and sales.

We can do it on a one-time basis, or with a continuing effort that creates traffic year 'round.

With direct marketing, you know right away that it's effective... the coupons customers bring in will tell you exactly what's working, and how well.

The tougher the times, the tougher the competition... the more you need to isolate your best customers and speak directly to them.

Contact our Automotive Marketing Services Division today, and let Polk tune up your service and parts sales.

hours. The number of departments open 50 hours or less is declining. In 1986, only 25 percent opened 56 hours or more; the figure is now 41 percent. This year, 18 percent are open more than 60 hours a week, compared to 8 percent in 1990.

At the same time, the number of workers in the typical service department is growing. Perhaps the longer hours and more employees are reasons why dealerships are subcontracting out less high-tech work to independents.

Last year 53 percent of those surveyed said they sent such work to specialists. This year the figure is 40 percent. A number of service managers say they are training more personnel for high-tech work such as electronic instrument clusters. They also are using factory exchange programs for high-tech componentry that goes awry. Those who send out work do so mainly on electronic instrumentation, stereos, speedometers/odometers, convertible tops, windshields and radiators.

Also subsiding are problems with high-tech basecoat/clearcoat paints. In 1988 and 1989, 40 percent of those surveyed said they were having difficulties in coping with the new paints. This year the figure is 26 percent. That is because personnel are getting used to working with the product, they are being trained better, they're working in new high-tech paint booths, or they're simply subcontracting out the work.

Nearly two-thirds (59 percent) of those surveyed said they offer detailing services. However, 31 percent said they do not plan to go take on this specialized activity. Perhaps they have more important things to think about — like an auto-market upswing during the next two years. □

Al Fleming is industry editor for Automotive News.

Automotive News Survey of Dealer Service Managers

Note: In some cases, totals do not add to 100 percent because either multiple responses to a question were given or no response was given.

Question 1: What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?

Automobile Market	1991	1990	1989	1988
Improve	62.7	36.5	34.1	44.3
Same	25.4	36.5	38.6	39.2
Worse	9.5	23.3	23.5	12.4
Dealership				
Improve	77.0	62.9	74.2	78.4
Same	10.3	24.5	17.4	16.5
Worse	5.6	6.9	6.1	1.5

Question 2: Do you, as a service mnager, feel that your service department offers a potential for increased profits in the future?

	1991	1990	1989	1988
Yes	95.2	92.5	95.5	94.8
No	4.0	5.7	3.0	5.2

Question 3: Do you feel that your dealership management believes the service department offers the potential for increased profits in the future?

	1991	1990	1989	1988
Yes	92.1	88.7	95.5	92.8
No	5.6	8.2	1.5	6.2

Question 4: Do you, as a service manager, believe your dealership is spending enough on advertising and promotion to improve your service business?

	1991	1990	1989	1988
Yes	70.6	67.9	65.9	67.5
No	27.8	28.9	33.3	30.4

Question 5: Who hires the service technicians in your service department?

	1991	1990	1989	1988
Dealership owner	6.3	18.9	13.6	11.3
Dealership manager	4.2	2.5	8.3	5.7
Service manager	75.4	87.4	91.7	92.3
Other	11.3	1.3	9.8	10.8

Question 6: Compared to last year, finding competent service technicians today is:

	1991	1990	1989	1988
Less difficult	19.8	6.9	4.5	3.1
Same	25.4	25.2	22.7	23.7
More difficult	54.0	67.3	71.2	71.1

Question 7: Do you have women service technicians?

	1991	1990	1989	1988
Yes	3.2	3.8	1.5	5.2
No	95.2	96.2	98.5	92.3

Question 8: When your dealership buys new service equipment and services, are you involved?

	1991	1990	1989	1988
Yes	94.4	96.2	97.0	96.4
No	3.2	2.5	2.3	3.6

If yes, which one statement below best describes you involvement?

	1991	1990	1989	1988
Originate purchase request	61.3	54.1	59.8	57.8
Approve makes(s) selected	14.5	13.2	9.4	7.6
Negotiate terms	6.5	6.9	5.0	2.1
Give advice on needs	12.9	22.6	20.8	19.2

Question 9: Does your dealership plan to buy any service equipment this year?

	1991	1990	1989	1988
Yes	57.1	60.4	49.2	58.8
No	38.1	37.7	46.2	38.1

If so, what type?

	1991	1990	1989	1988
Tuneup	1.6	5.9	5.4	15.8
Wheel alignment	13.9	9.3	9.6	31.6
Wheel balance	5.7	2.5	2.3	12.3
Brakes	8.2	3.8	6.9	15.8
Transmissions	5.7	2.5	2.7	2.7
Engine overhaul	1.6	2.1	3.1	1.8
Refinishing	6.6	2.5	4.6	4.0
Frame-body straightening	0.9	0.3	0.2	0.7
Computerized diagnostic (console)	18.9	15.7	17.7	19.7
Computerized diagnostic (hand held)	8.2	9.3	6.2	9.3
Other	24.6	18.2	21.5	25.4

Question 10: Are 1991-model cars more profitable to service than those of previous years?

	1991	1990	1989	1988
Yes	11.9	9.4	8.3	8.2
No	49.2	41.5	37.9	43.8
Same	36.5	47.2	52.3	46.4

Question 11: Are 1991-model cars more difficult to service than those of previous years?

	1991	1990	1989	1988
Yes	42.1	48.4	37.1	40.7
No	27.8	21.4	25.8	25.3
Same	25.4	30.2	36.4	33.0

Question 12: How many hours per week is your service department open?

	1991	1990	1989	1988
Less than 45 hours	9.5	16.4	20.5	12.9
45 to 50 hours	24.6	40.3	43.9	38.7
51 to 55 hours	22.2	20.5	15.9	22.7
56 to 60 hours	23.0	14.5	11.4	11.9
More than 60 hours	18.3	8.8	8.3	13.9

Question 13: How many employees are there in your service department including parts and service personnel?

	1991	1990	1989	1988
1 to 10	18.3	26.5	29.5	23.2
11 to 20	21.4	33.4	34.1	32.0
21 to 30	24.6	10.1	10.6	15.5
31 to 40	11.9	14.5	13.6	11.3
More than 40	17.5	13.7	12.1	17.5

Question 14: What is your most profitable service operation?

	1991	1990	1989	1988
Tuneup	28.7	30.2	39.4	37.6
Wheel alignment	0.3	9.7	15.2	12.9
Wheel balance	1.3	4.5	4.5	8.2
Brakes	14.0	24.1	28.0	32.0
Transmissions	4.7	15.0	22.0	13.9
Engine overhaul	6.7	7.0	15.2	9.8
Rustproofing	0.0	2.5	3.8	12.9
Body shop	3.3	5.5	7.6	10.3
Other	35.3	29.1	20.5	14.9

Question 15: How much of the following contribute to your service profits?

1991	Significantly	Some	None
New car warranty work	42.9	50.0	4.8
Extended service contracts	19.8	71.4	4.8
General customer drive-in	77.0	18.3	4.0
Special service packages	55.6	38.9	4.8
1990	**Significantly**	**Some**	**None**
New car warranty work	38.4	53.5	4.4
Extended service contracts	31.4	61.0	3.1
General customer drive-in	64.2	32.1	0.0
Special service packages	45.9	40.9	7.5
1989	**Significantly**	**Some**	**None**
New car warranty work	37.9	56.8	1.5
Extended service contracts	25.0	65.2	6.8
General customer drive-in	77.3	21.2	0.0
Special service packages	40.2	51.5	4.5
1988	**Significantly**	**Some**	**None**
New car warranty work	41.2	50.0	7.2
Extended service contracts	36.1	56.2	3.6
General customer drive-in	73.6	23.8	0.0
Special service packages	38.7	46.9	7.7

Question 16: Do you subcontract service work to specialists for jobs involving high-tech repair (such as electronic instrument clusters)?

	1991	1990	1989	1988
Yes	40.5	53.5	41.7	—
No	57.1	45.3	58.3	—

Question 17: Has your shop had any difficulties with today's high-tech basecoat/ clearcoat paints?

	1991	1990	1989	1988
Yes	26.2	40.3	40.2	—
No	57.9	56.0	53.8	—

Question 18: Does your service department offer quick lube/oil change service?

	1991	1990	1989	1988
Yes	66.7	44.0	47.7	—
No	31.0	55.3	50.0	—

Question 19: If not, does it plan to in the near future?

	1991	1990	1989	1988
Yes	11.9	20.8	50.0	—
No	22.2	77.2	48.5	—

Question 20: Does your service department offer detailing to customers?

	1991	1990	1989	1988
Yes	59.5	50.9	65.9	—
No	37.3	48.4	32.6	—

Question 21: If not, does it plan to in the near future?

	1991	1990	1989	1988
Yes	2.4	8.8	7.0	—
No	31.7	91.2	93.0	—

Question 22: What is your age?

	1991	1990	1989	1988
18 to 24	0.0	1.3	1.5	2.1
25 to 29	3.2	3.8	13.6	8.8
30 to 34	8.7	15.1	13.6	18.6
35 to 39	34.1	28.9	21.2	20.6
40 to 44	21.4	20.1	19.7	18.6
45 to 49	15.1	10.7	14.4	12.9
50 to 54	8.7	6.3	9.8	8.8
55 to 59	4.0	6.3	2.3	5.7
60 to 64	3.2	7.5	3.0	2.1
65 or over	0.0	0.0	0.0	1.0

Question 23: Before becoming a service manager at your present or at any other dealership what type of job did you have?

	1991	1990	1989	1988
Write-up man	31.3	44.0	34.8	34.2
Mechanic	21.8	27.0	49.2	51.0
Parts manager	12.2	9.4	15.2	21.1
Other	34.7	18.9	34.1	37.1

Question 24: How many years have you been a service manager (including time spent at previous dealerships)?

	1991	1990	1989	1988
1 to 3	14.3	24.0	26.5	24.9
4 to 7	25.4	25.0	23.5	19.7
8 to 11	19.0	17.0	23.5	22.3
12 to 15	15.1	5.7	9.8	12.4
16 to 19	9.5	10.7	5.3	8.8
20 or more	15.1	17.0	10.6	11.9

Question 25: What was your total compensation last year for being a service manager?

	1991	1990	1989	1988
Less than $15,000	0.8	0.0	3.0	0.5
$15,001 to $19,999	0.8	5.0	5.3	3.1
$20,000 to $24,999	2.4	8.8	6.8	11.9
$25,000 to $29,999	4.0	13.2	12.9	11.3
$30,000 to $34,999	4.8	13.8	14.4	12.9
$35,000 to $39,999	5.6	9.4	9.1	12.9
$40,000 to $44,999	7.1	11.3	10.6	9.8
$45,000 to $49,999	20.6	9.4	7.6	5.7
$50,000 or more	49.2	27.0	26.5	25.8

Question 26: What was your total compensation for being a service manager based on?

	1991	1990	1989	1988
Salary only	6.6	13.2	15.2	12.9
Salary + overtime	0.7	0.0	0.8	0.0
Salary + bonus	38.2	40.3	34.1	42.8
Salary + incentive	35.3	39.0	35.6	30.9
Salary + stock	0.0	0.3	1.5	0.0
Salary + other	8.1	6.3	11.4	11.3

Question 27: Do you believe your salary and benefits are commensurate with your experience?

	1991	1990	1989	1988
Yes	60.3	57.9	56.8	62.9
No	36.5	39.6	40.9	33.0

Lifesavers

Contributions of parts and service to dealers' bottom lines is 'tremendous,' says NADA's chief economist

From his vantage point as chief economist for the 20,000-member National Automobile Dealers Association in McLean, Va., Tom Webb scans the broad panorama of dealerships with clear insight into developing trends are in car and truck retailing, including service and parts operations. He is interviewed by Roger Rowand, Automotive News Insight *reporter.*

What are some of the recent changes in dealership parts and service business you've been able to identify statistically?

We've seen a tremendous increase in contributions to net and gross coming from parts and service in recent years. That's basically because car sales have been down and new-vehicle departments went into the red last year. But since 1985, generally strong vehicle sales, extended factory warranties and increased service contract sales have contributed to an increase of 45 percent in the service and parts business of franchised dealers.

Webb

In March of this year, service and parts accounted for 15.6 percent of the average dealership's total sales. That was up from 14.9 percent a year before. That increase came during a decline in the average dealership's revenues from service and parts to $443,661 from $453,527 in March a year before.

In January this year, the percentage of sales from service and parts reached as high as 18.3 percent. That stands out dramatically when you look back as recently as five years ago, when the service and parts contribution to the average dealership's total sales was just 12.8 percent.

What usually happens when a recession ends?

Usually there's some fall-off in the service and parts business in the wake of a major economic downturn. That's related to the fact that primarily the vehicles dealers service are from two to three years old. If new-vehicle sales have been slow for two or three years, it may take that long for the service business to catch up. Dealers continue to primarily work on newer vehicles. Most of the work is done on vehicles with less than 50,000 miles.

Are dealers generally content with their parts and service operations, or would they rather concentrate on the showrooms?

I think there's been a tremendous change in attitude the last couple of years. I suspect that's because dealers typically are now making profits in service and parts, while they weren't a few years ago. That also is increasing customer satisfaction because now that the dealers have profits back there they are able to make investments in terms of technicians and equipment.

Dealers provided 342,000 service stalls, employed 232,000 technicians and carried a parts inventory of close to $4.9 billion in 1990. The average dealership's inventory stood at around the $200,000 mark in 1990. The average point employed 10 mechanics who manned 14 service bays, excluding body shops. The average dealership wrote a total of 8,100 service orders last year compared with the 7,925 orders that were written five years earlier.

Service and parts accounted for 15.3 percent of the average dealer's total sales and over 80 percent of total profits in 1990. Six years ago, in 1985, the average dealership's service and parts department accounted for 12.9 percent of total dealership sales and approximately the same percentage of dealership profits.

Does the fact that emission control equipment is warranted for such a long time bring more people into the dealership?

Yes, along with the overall extension of warranty and with service contracts. Consumers also correctly perceive that dealers are best qualified to handle some of today's service problems. Of course, new cars have to meet safety and pollution requirements, and it's up to the operator to maintain that equipment. □

Dealers' total service and parts sales

Scale in billions of dollars

	Amount	Percent change
1980	$22,703	– 1.9

SALES

FROM PAGE 1

ing the year-to-year deficit.

Light-truck sales dropped 15.9 percent for the first six months, with sales of 2,040,800. Cars took a lesser beating with a 14.3 percent drop. The preliminary total was 4,138,300.

In June the Big 3's total vehicle sales were 827,020, down 10.3 percent from 1990.

Car sales slipped about 63,000 units; truck deliveries were off about 32,000.

Sales of Japanese vehicles, import and transplant combined, dipped only 4.3 percent in June compared to a 33.4 percent plunge for European vehicles.

Total car and light-truck sales of 229,265 in June catapulted Chevrolet into the top-seller position for June as well as for the first half. At the end of May, Ford was 3,000 units ahead of Chevy. Chevrolet has led in car sales all year, but this is the first time it has had the year-to-date lead in total vehicles.

Ford posted sales of 204,186 cars and trucks in June.

Four Big 3 car makes reported sales increases for June, compared with 1990 – Buick, Mercury, Dodge and Eagle.

General Motors' car sales fell 8.2 percent in June, with Buick the only gainer. Buick was up 8.1 percent.

Ford Motor's car sales decreased 15.8 percent, with Mercury showing a 9.4 percent increase.

Chrysler Corp.'s car sales dipped 13.5 percent overall, but Eagle was up 12.6 percent and Dodge improved 8.6 percent. Sales of the Chrysler marque were off 47.9 percent. Chrysler's truck sales increased 0.9 percent.

SAAB

FROM PAGE 1

Scania AB's Saab Car Division in late 1989.

Since the new model would have been based on the rear-wheel-drive platform of GM Europe's planned successor to the full-sized Opel Omega/Vauxhall Carlton, the decision reflects Saab's willingness to remain independent of GM.

Instead, Saab decided to remain "a front-wheel-drive company," according to one company official. Another high-ranking Saab engineer described the decision as a matter of choosing "new technology over old technology."

Saab management insists it is zealously guarding brand character — which ranges from its front-wheel-drive tradition to such quirky attributes as the 900's floor-mounted ignition.

Saab President David Herman recently said, "There is no single subject on which more time is spent at this company. All these things about manufacturing and sales are important, but there is nothing more important to our future than our brand character."

Saab's highest-priced cars in the United States now sell for about $34,000. The 108 would have taken the company into the $45,000 to $50,000 price range. But Herman said recently that "there are plenty of people who will appreciate our brand character elements in that segment."

The 108 was expected to be powered either by a large-displacement version of the General Motors Europe V-6 that will be produced beginning next year in Ellesmere Port, England, or GM's planned North[illegible]ar V-8.

Saab's first new model under GM is the replacement for the 900, code-named 104, that is due in 1993. It initially presumed that the 9000 successor, project 106, was to be launched in about 1995 and followed two years later by the new luxury sedan.

> "There is nothing more important to our future than our brand character."
>
> **David Herman**
> Saab president

But as the company's product plans under GM tutelage evolved, the 108 was moved ahead of the 106, presumably to base it off the rear-wheel-drive Omega/Carlton replacement due in 1995.

Cancellation of the 108 project pulls the front-wheel-drive 106 forward, sources say. The 9000 replacement will follow the original timetable for the defunct luxury range-topper by about one year, or about 1996.

Saab nonetheless is linking its product plans with GM, although mainly in component sourcing.

The 900 replacement is on schedule and figures to get a 2.7-liter version of GM Europe's new V-6, while the 9000 replacement will have a 3.2-liter derivative of the same powerplant.

Insiders say that 28 percent of the 104's componentry will be from GM Europe's Opel Vectra/Vauxhall Cavalier mid-range model, with 22 percent carryover parts and 50 percent completely new.

Saab's four-cylinder engines will still be used for the new model. Styling is by Saab design chief Bjorn Envall's internal staff.

AUTOMOTIVE NEWS/JOE WILSSENS

Richard Ruzzin and one of the Cadillacs that was created under his direction, the 1992 Seville.

Ruzzin given control of Adam Opel design

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

General Motors announced that Cadillac designer Richard F. Ruzzin will be the new director of design for GM's Adam Opel AG subsidiary.

As reported last week in *Automotive News*, Ruzzin will succeed Wayne Cherry, who has been head of Opel design since 1983.

Ruzzin, 55, has been studio chief for Cadillac exterior design since 1987.

In making the announcement, Charles M. Jordan, GM vice president in charge of design staff, said: "GM is focusing on the growing importance of international design standards . . . The spectacular success of the 1992 Cadillac Seville and Eldorado programs, created under Dick's direction, exemplifies this new trend toward world design standards."

Cherry heads back to the United States

Jordan also praised Cherry, 53, for overseeing award-winning designs for Opel that have "helped GM significantly increase its market share in Europe."

Neither Ruzzin's replacement nor Cherry's new duties were announced.

It is expected, however, that Ruzzin's assistant, Larry Erickson, will be tapped to head the Cadillac exterior studio.

Cherry, who is expected to return Sept. 1 to design staff headquarters at the GM Technical Center in Warren, Mich., reportedly will take over design for Chevrolet or the entire Chevrolet-Pontiac-Canada Group.

Ruzzin has been with design staff since 1961.

Cherry joined the staff in 1962 and has spent most of his career in Europe, beginning in 1965 with Vauxhall Motors Ltd.

All cars (1990, no expiration date)	$500-1,500

Makers set 1991 cleanup plans

Chrysler tips hand on $4,000 in incentives for '92 Monaco

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. notified dealers last week that the 1992 Dodge Monaco will debut this fall with combined consumer and dealer rebates up to $4,000. Monaco and its sibling, Eagle Premier, will be discontinued after the 1992 model year.

Also last week, Chrysler, Hyundai and Subaru of America Inc. announced cleanup incentive programs that extend through the end of the 1991 model year.

Other new programs were listed last week by Alfa Romeo Distributors of North America, American Isuzu Motors Inc., Peugeot Motors of America Inc. and Volvo Cars of North America.

Chrysler's program for the 1992 Monaco is similar to the incentive it placed on the 1991 Monaco/Premier last April. The company paid dealers $1,000 for first car sold, $1,500 per unit for the next two and $2,000 per unit for any additional sales. Additionally, dealers received another $1,000 per unit when they ordered the cars.

The only difference in the new program is that dealers will receive $500 per unit when the cars are ordered instead of $1,000. There is another $1,500 rebate to the customer.

It is unclear whether Premier will be included in the new program.

As part of its cleanup incentive, Chrysler is offering a $500 customer rebate on 1991 Dodge Caravan and Grand Caravan; 1991 Plymouth Voyager and Grand Voyager and 1991 Chrysler Town & Country. The program includes minivans with air bags.

There also is a $500 dealer rebate on 1991 minivans without air bags and a $1,500 customer rebate on 1990 minivans.

Chrysler increased incentives on several models: from $1,000 to $1,500 on the 1991 Jeep Cherokee and 1990 Chrysler Imperial and New Yorker Fifth Avenue; from $500 to $1,000 on the 1990 Chrysler LeBaron convertible, and from $700 to $1,000 on 1990 New Yorker Salon, Dodge Dynasty, Dodge Spirit, Plymouth Acclaim and Chrysler LeBaron sedan.

Also, Chrysler reduced its finance rates. They now start at 2.9 percent on 24-month contracts on all vehicles except minivans. Finance rates begin at 7.9 percent on minivans, unchanged from the previous program. Cut-rate financing is in lieu of customer rebates.

Chrysler is offering rebates of $100 to $700 to dealers on 1990-91 Dodge Spirit and Shadow and 1990-91 Plymouth Acclaim and Sundance, based on performance against quota.

Also, Chyrsler is paying dealers $500 to $1,000 on 1990 and 1991 Dodge trucks.

Jeep-Eagle dealers earn $1,000 to $2,000 on sales of Eagle Premier and $500 on 1991 Jeep Cherokee. The Dodge Monaco dealer rebate also is $1,000 to $2,000.

Chrysler programs expire Sept. 30.

Alfa Romeo is paying dealers up to $200 per month in floorplanning assistance on base 1991 164 models and on 164L automatics through Dec. 31.

Isuzu's dealer incentive program runs through Sept. 16. It pays dealers $750 to $1,800 on 1991 Trooper and pickup depending on the number of vehicles sold. Dealers earn a flat payment of $700 to $1,500 on 1991 Stylus and Impulse.

Hyundai Motor America announced a new round of consumer and dealer rebates that expire Oct. 2. On the consumer side, Hyundai is paying rebates of $500 to $1,000 on 1990 and 1991 Excel and Sonata and 1991 Scoupe.

The importer is offering an additional $300 to active military personnel who purchase any Hyundai car and $1,000 to Hyundai owners who trade a 1986-90 model on a new 1990 or 1991 Hyundai.

Consumers qualify for either the military program or the trade-in program.

Also, Hyundai is paying $100 to consumers who test drive a 1991 Sonata but purchase an eligible competitive model.

Hyundai dealers earn $100 to $300 on 1991 Sonata and Scoupe depending on the number of cars sold.

Through July 31, **Peugeot** is offering buyers interest-free loans on contracts up to 48 months. Down payments of 10 percent and 20 percent, respectively, are required on 36- and 48-month loans. No down payment is required on 24-month loans.

Also, Peugeot is offering 24-, 36- and 48-month lease contracts with no down payment.

Subaru of America Inc. announced consumer incentives ranging from $500 to $2,000 on 1991 Legacy, Loyale, XT and XT6. The program expires Oct. 2.

Volvo is offering consumers special leasing deals on 1991 models of the 740 and 940.

They range from $399 a month to $449 a month. Also, dealers earn $1,500 on sales of 740 and 940 cars (1991 models). The factory-to-dealer incentive does not include lease transactions. The program expires Aug. 18.

GM Lordstown may go to three crews

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

LORDSTOWN, Ohio — A tentative local contract was announced last week that would have employees at the General Motors assembly plant here working in three crews, two shifts per day for five days with single shifts on Saturday and Sunday.

If ratified, the Lordstown assembly plant would become the first GM facility in North America to operate on a three-crew, two-shift schedule, although the system is used at a GM plant in Belgium.

Lordstown Plant Manager Michael J. Cubbin hailed the tentative pact as a means to make the facility more productive and competitive.

Al Alli, UAW Local 1112 shop chairman, praised the agreement because it would provide employees with job security at a time when the plant is losing van production to a plant in Flint, Mich.

The Lordstown plant now produces only the Chevrolet Cavalier and the Pontiac Sunbird.

Alli said that the change could boost capacity to as much as 480,000 cars a year from the current 360,000.

Under the new agreement, the Lordstown plant would work 120 hours per week.

Each of the three crews would work four 10-hour shifts per week, with most maintenance work carried out on weekends.

The Lordstown assembly plant has been plagued with labor difficulties through much of its 25-year history. It was built as a Chevrolet plant but became a source of labor unrest in the early 1970s as part of the old General Motors Assembly Division.The plant was the original source of the Chevrolet Vega 2300 when that car went into production in 1970 as a 1971 model.

It was once one of the largest assembly complexes under one roof, which prompted former Chevrolet General Manager John Z. DeLorean to remark "that you can see the curvature of the earth" inside the plant.

Overweight Mercedes S class has Germans laughing

By Larry Thorson
THE ASSOCIATED PRESS

BERLIN — There's a red tinge of embarrassment reflected in the shining silver star of Mercedes-Benz. Its new S-class cars are so heavy people are making fun of them.

Mercedes has admitted a minor mistake in a massive new model that weights 2.5 tons and seeks to shoulder aside Japanese challengers in the luxury market.

But the Germans are making jokes about the Mercedes behemoths, which have four doors but could be technically overloaded with three passengers.

At issue are regulations of Germany's eagle-eyed Technical Inspection Organization, which sets standards for everything from cars to nuclear power plants. Cars are required to list their gross weights so the inspection organization can certify that equipment such as brakes and suspensions are built to handle the weight.

The new Mercedes was a bit overweight, especially when buyers loaded it with heavy options like automatic transmissions, air conditioning and the variety of electric motors to operate a sunroof, adjustable seats and a load-leveler.

The German enthusiast magazine *Auto Motor Sport* discovered the weight problem in a test comparing a Mercedes 300SE with a BMW 735i and a Jaguar XJ6. That prompted one reader to write that the luxury Mercedes could only be used to carry four dwarfs and their toothbrushes to a nudist camp.

Mercedes struck back last week by adding 308 pounds to the car, so that a fully loaded 300SE could weigh 5,610 pounds. Its full-page ads declared: "The new S-class is built so safely that it forgives almost all mistakes. Even our own."

San Francisco dealers' slump still lingers

THE ASSOCIATED PRESS

SAN FRANCISCO — Don't tell San Francisco Bay area automobile dealers the recession is over.

Despite some favorable economic news and a slight rise in national car sales in early June, local dealers have yet to see more than a blip in increased sales.

But they're delighted for the public to hear about an economic recovery as much and as loudly as possible. Dealers think the mood of consumers is crucial to ending their deferral of car purchases — and ending the depression the dealers have been mired in since New Year's.

The most recent regional figures, compiled from state Board of Equalization figures on taxable sales, show that area new car and truck dealers sustained a 4 percent drop in vehicle and parts sales as early in the slump as last summer.

California car and light-truck sales crashed 19 percent in the first quarter of 1991 from a year earlier, according to J.D. Power and Associates of Agoura Hills, Calif. National sales for the year through May were down 16.5 percent.

"We have fared just as well as the national scene," says Gordon Cuneo, general manager of European Motors in San Francisco. "Our sales are off in the neighborhood of 25 percent from this time last year.

"We realize that it's partly because of the recession and partly because of the (gulf) war preoccupation. We also thought that for our dealership, which deals only in Mercedes-Benz, the luxury tax was a hit right between the eyes."

The federal tax is 10 percent of the amount by which a car price exceeds $30,000. The cost added to a $50,000 auto is $2,000. Many of a dealership's costs are fixed.

European Motors has responded by reducing its sales force from 11 to eight.

Ad spending also has been slashed, says Lee Castonguay, president of the Northern California Motor Car Dealers Association.

Service-department revenues and used-car sales are helping dealers through the gloom. Strong sales of used cars don't necessarily reflect trading down, Castonguay says.

"Used-car buyers are buying for need," he says. "The new-car buyer is buying for desire."

New-car sales problems are likely accelerating a long-term reduction in the number of dealerships, as retailers with low cash reserves go out of business.

The counties surrounding San Francisco lost a net 13 new-vehicle dealerships in 1990. California has lost 1,000 of the 3,500 dealerships it had in 1985, and the number is expected to drop to 1,700 by 1995, says Martin Swig. He owns the San Francisco Auto Center, which sells 12 makes.

The number of new-car lots is stable, experts say, but larger operators are gobbling up smaller ones.

"Traditional small car dealers are going the way of the mom-and-pop grocery store," Swig says. "Your share of market goes down and down and down, and pretty soon you're out of business."

Car output drops 6.8% below May

By Bob DeMayer
SPECIAL CORRESPONDENT

Auto production in the United States trailed the year-ago total for June, the second quarter and the first half.

U.S. automakers assembled 478,578 cars in June, 6.86 percent below the prior month and 21.82 percent below last year.

Car production during the second quarter of 1991 totaled 1,458,446 units, 11.76 percent above 1991's first quarter, but 16.27 percent below 1990's second quarter.

First-half car output totaled 2,763,472, the lowest first-half since 1982.

Domestic truck producers built 326,415 units in June, 4.92 percent below the prior month, and 17.73 percent below the last year. It was the lowest June since 1986.

Truck assembly in the second quarter was 976,341 units, 42.31 percent above the first quarter but 14.57 percent below 1990's second quarter.

In the first half of this year, 1,662,441 trucks were assembled, down 20.71 percent from last year and the lowest first-half total since 1984.

With several plants down for model change or vacation last week, automakers scheduled production of 57,760 cars, 54.50 percent below last year. All plants were closed July 4.

Truckmakers scheduled 39,589 units last week, 50.52 percent below last year.

GM scheduled two shifts of Saturday overtime at its Wilmington, Del., car plant and Shreveport, La., truck plant and one shift of Saturday overtime at its Scarborough and Oshawa truck plants in Ontario.

All Ford Motor Co. plants are on vacation this week.

Chrysler Corp. scheduled one shift of Saturday overtime at both of its Windsor, Ontario, truck plants.

The Mazda Motor Manufacturing (USA) Corp. plant was down last week for model changeover, and all Honda of America Manufacturing Inc. plants were down last week for vacation.

CANADA: Canadian auto producers assembled 111,446 units in June, down 1.76 percent from the prior month but 5.01 percent above the year-ago month.

Canadian truck production in June totaled 82,011 units, 0.84 percent below the prior month and 90.03 percent below 1990.

Canadian assembly plants were closed last Monday in observance of Canada Day.

Scheduled car production of 13,645 units last week fell 43.89 percent below the previous week.

Last week's estimated truck production of 14,519 fell 18.72 percent from the previous week.

TIMING CHAIN

Chrysler tightens development cycle, plans launches every 6 months till '95

Second in a series of articles exploring product plans of the U.S. Big 3 and Asian and European automakers.

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp.'s product strategy for the 1990s can be summed up in three words: four, six, eight.

Put simply, Chrysler's plan calls for each new car model to be replaced within four years, minivans in six years and light trucks in eight.

"We will have new product every six months between now and 1995 of one form or another — either through the car business, truck or Jeep," notes Ronald R. Boltz, Chrysler's vice president of product strategy and regulatory affairs.

And those products are being developed faster. Chrysler President Robert Lutz says the company has chopped approximately a year out of its automobile development cycle, which is now down to about

Mercedes may use Mexico as source of cars for U.S.

Kit production due to begin in 1993

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STUTTGART, Germany — In a dramatic turnabout, Mercedes-Benz AG has decided to begin assembling passenger cars in Mexico and is studying the possibility of exporting its car production there to the United States.

A decision to export passenger cars from Mexico would represent an attitudinal shift of Copernican magnitude for the German luxury car maker. The company assembles cars in two other countries, but has long refused to export from anywhere but its German factories to protect its zealously guarded "made-in-Germany" reputation.

Under the plan, disclosed during a recent interview with Jurgen Hubbert, head of Mercedes' passenger-car division, the automaker will begin assembling about 1,000 mid-range W124 models annually in Mexico in 1993 from kits.

Building on that experience, the company will gradually raise output while moving toward a go-or-no-go decision on exports, he suggested.

"For us it would be an historical point because, although we build some passenger cars in South Africa and Indonesia, we never exported them to other countries," Hubbert said.

Mercedes assembled about 6,500 mid-class and S-class models at Mercedes-Benz South Africa last year, and 2,000 at its German Motor Manufacturing affiliate in Indonesia, for local consumption.

"All the exports are made in Germany, so it is a very difficult and very political situation," he said. "We have to be very careful."

Volkswagen AG currently supplies Golfs and Jettas to the U.S. market from its plant in Puebla, Mexico, and is considered moving U.S. sourcing of other models now built in Germany to Mexico.

Volkswagen plans to increase its car production capacity in Mexico from 190,000 to 330,000 in the next five years through an investment of 1.4 billion marks ($770 million).

Hubbert said Mercedes' interest in Mexico stems from the move toward a North American free trade agreement linking Mexico with the United States and Canada, combined with a big push for German auto industry investments by Mexican President Carlos Salinas.

The Mexican president, who recently visited Mercedes' Stuttgart headquarters, is seeking a broader commitment from the German car-

NADA chief counsels dealers to hold fast

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Like the football coach whose team is hopelessly trailing at halftime, Frank Anderson Jr. has spent his first five months as president of the National Automobile Dealers Association giving locker room pep talks to dealers. His message is clear: more defense.

249 dealers victims of recession, Page 40

"From an NADA standpoint, we have tried to give dealers a kind of road map to run on," he says. "We haven't tried to mislead them on the economic problems that exist out there. We tell dealers to batten down the hatches and ride it out."

When Anderson took office in February, his overriding goal was to improve dealer profits. It was a big order in the teeth of a stubborn recession that kindled a serious erosion of dealer profits.

According to NADA, net profits before taxes as a percent of total sales for the average dealership were 1.0 percent for the first quarter this year compared to 1.5 percent for the same period in 1990 and 1.1 percent in 1989.

But if Anderson hasn't improved the bottom line for dealers, he can at least take solace in one number carefully watched by NADA — the association's dealer attrition rate. It stands at about 30 per month, which is average.

For NADA, that's a relief and a vindication of sorts against doomsayers like J.D. Power and Associates, a California-based consulting firm, that predicted in 1989 that the number of dealership owners would dip to 15,000 within a few years from 16,000 at that time. They control about 24,000 dealerships.

"If we look at our membership rolls statistically, the projections

Chrysler caught in dumping fallout

Plymouth and Eagle dealers will sell one of the vehicles involved

By David Versical
NATIONAL EDITOR

One irony of the minivan dumping case is that Chrysler Corp. will be selling an allegedly dumped vehicle this fall.

Part of the Big 3 complaint, which advanced last week in Washington, is fear that a low-priced Mitsubishi Expo LRV will take sales away from Big 3 minivans. In its brief, Mitsubishi notes that the price it will charge Chrysler for its versions of the LRV is tied directly to the prices that Mitsubishi charges its own dealers.

"To the extent anyone is seeking to engage in aggressive pricing of the (Expo LRV), it is Chrysler, not MMC," Mitsubishi says in its brief. Under an agreement between Chrysler and Mitsubishi Motors Corp., Mitsubishi "cannot sell the vehicles to dealers at less than the fair market value and thereby hope to gain a competitive advantage over Chrysler because all such price cuts are passed directly to Chrysler."

Chrysler, which owns 11 percent of Mitsubishi Motors Corp., will sell a version of the Expo LRV as the 1992 Eagle Summit wagon and the Plymouth Colt Vista. Mitsubishi Motor Sales of America has

Lessons of Saturn
"The Saturn concept" is beginning to spread like a new gospel through the old offices and engineering rooms of General Motors. Story on Page 3.

Fleets keep Big 3 afloat in choppy first half

Fleet sales by the Big 3 helped prop up a weak market in the first half of 1991 while retail customers were being battered by recession and war.

Fleet purchases made a relative hero of the Buick Century, and a ban on fleet sales made a relative goat of the Ford Crown Victoria.

European makes were the big losers for the period, down 25.7 percent. They do little fleet business, and they are concentrated in the upper end of the luxury market where a new tax effected a double whammy: moving some sales from 1991 into December 1990 to beat the tax, and putting other sales off indefinitely.

Japanese makers were the big winners in the first half, off just 8.0 percent. They do some fleet business, and they have managed to keep retail buyers reaching for their checkbooks. Only the Nissan brand is suffering at Big 3 levels, off 15.0 percent.

Minus 15.0 percent was exactly the market loss after six months; by June 30, 1990, Americans had bought 1,086,207 more cars and light trucks than they did this year.

Makes losing sales at a slower rate than 15.0 percent picked up market share. That made a hero of Buick, which was 5,482 units ahead of last year, up 2.0 percent in sales and up a full percentage point in car market share for the first half. This year, 66 of every 1,000 cars sold were Buicks; last year, it was 56 of every 1,000.

The market can hardly catch

Toyota to sell VWs in Japan; link with U.S. maker hinted

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. said last week that its dealers will begin selling Volkswagens and Audis in Japan next year in an agreement that could push the German automaker's local sales to 100,000 units annually by 1996.

The agreement, which will supplement VW's current arrangement with a separate import firm, had been expected. According to reports, Toyota in recent months has been seeking a distribution agreement with either Volkswagen or General Motors or both.

But at a press briefing here, Toyota President Shoichiro Toyoda told reporters that the pact with Volkswagen does not rule out forging a similar link with an American automaker as well.

"We are not limiting the possibility; the idea can be expanded to include other companies," Toyoda said in response to a question. "But there is no specific plan."

Under terms of the agreement with Volkswagen, Toyota said that it initially will distribute VW and Audi models through 50 dealers, with a target of some 7,000 units a year. That will be expanded to about 100 outlets selling 30,000 units annually by 1996.

S. Toyoda: open to a U.S. pact

Details of the arrangement still have to be worked out, including whether VW and Audi will be sold through exclusive outlets, Toyoda said.

The Toyota distribution channel will supplement Volkswagen's existing

Car supply declines to 60 days

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

June sales — highest of the year — combined with conservative production schedules to cut the new-car inventory to a 60-day supply on July 1, down from 65 days a month earlier and 64 days a year ago.

The *Automotive News* five-year average for July 1 is 69 days.

The supply of domestic cars was 54 days, and the supply of imports was 80 days. The domestic number compares with 60 days a month ago and 62 days a year ago. Imports were 82 days a month ago and 70 days a year ago. (Tables are on Page 38.)

June car sales of 771,538 edged past May sales by about 2,000, while U.S.-Canada car production in June dipped 5.9 percent below the May total.

General Motors had the leanest days' supply among the Big 3 with a 54-day stock of domestic and imported cars. Ford Motor Co. had a 67-day supply and Chrysler Corp. had 68.

The lowest days' supply at GM was Oldsmobile Cutlass Ciera with 19. Ford's leader was Lincoln Town Car with 34, and Chrysler's best was Dodge Monaco with 32.

Honda had a 37-day supply of U.S.-built and imported autos, and Toyota was at 39 days. Nissan, with 98 days, had the highest domestic-import inventory among the transplants.

Lexus, with 25, and Infiniti, with 28, had the lowest days' supplies among the import-only makes.

Saturn President Richard G. "Skip" LeFauve admits that the automaker's assembly volumes have not been successful, but points to other successes such as teamwork practices and technologies such as lost-foam casting and plastic injection-molding.

THE SATURN DEBATE

The experiment in import fighting is well along the road now, but the question still lingers: 'What's in it for GM?'

By Phil Frame
and Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTERS

SPRING HILL, Tenn. — "The Saturn concept" is beginning to spread like a new gospel through the old offices and engineering rooms of General Motors.

A year after Saturn's first commercial car was assembled, GM is showing that former Chairman Roger Smith may have been correct back in 1983 when he claimed that the Saturn experiment would serve as an idea laboratory for the giant old automaker.

But while many ideas flowing from Saturn the lab are being applied elsewhere at GM, Saturn the company has not been able to staunch the immense flow of money heading out.

Saturn the lab started courtesy of a $3.5 billion GM investment. Now, Saturn the car company is costing its parent hundreds of millions of dollars in operating losses, in part because of initial production screw-ups that cut output.

"If you want to measure just the volume of the plant and say we're not successful, then OK, we weren't successful," said Saturn President Richard G. "Skip" LeFauve. "But look at all the other successes we've had so far. We've successfully relocated thousands of families. We've

Harold Poling, Ford's chairman, will speak at an industry seminar.

Poling among seminar stars

TRAVERSE CITY, Mich. — Ford Motor. Co. Chairman Harold A. Poling will address the 1991 University of Michigan Management Briefing Seminar on the automobile industry here Aug. 7-9.

Other industry speakers include Chrysler Corp. President Robert A. Lutz, Honda of America Manufacturing Inc. President Nobuhiko Kawamoto, and General Motors Vice Chairman John F. Smith Jr.

U.S. Secretary of Commerce Robert Mosbacher also will address the group.

Two related University of Michigan briefing seminars, on quality assurance and world class manufacturing, will be held Aug. 5-6. All events take place at the Grand Traverse Resort.

The seminars are sponsored by the university's Office for the Study of Automotive Transportation, Industrial Development Division, College of Engineering and School of Business Administration, in cooperation with *Automotive News*.

For registration or more information, contact the U-M Department of Conferences and Institutes, 200 Hill St., Ann Arbor, Mich. 48109-5305; (313) 764-5304.

Lexus and Infiniti share CSI kiss

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — For four years, Acura has made an art out of advertising its first-place finishes in J.D. Power and Associates' Customer Satisfaction Index.

But the new wearers of the crown, Lexus and Infiniti, will have to take a different approach. While they will both be able to say they are No. 1, Power will require them to tone down their trumpets and point out that the title was shared.

"The fact that there was a tie must be prominently displayed in all ads," said Patty Patano, director of special products marketing at the research firm in Agoura Hills, Calif. But "they don't have to say whom they tied with." The rule covers all national, local and dealer advertising, she said.

The luxury divisions tied at 170 in their first year in the index, well above third-place finisher Mercedes-Benz (147). Acura, which had held the crown since 1987, slipped eight points. It was tied at 146 with its sister division, Honda, which gained six points.

The survey again shows that customers, on average, are becoming happier with the way they are treated and the repair and reliability records of their cars.

The average on Power's index rose to 127 in 1991, up from 122 and 118 in the two preceding years. So even though such makes as Plymouth, Lincoln and Mercury improved their scores, they fell to below average in the ranking.

The biggest point gain among the top finishers was scored by Audi, up 13 points to 140, good for seventh place. Porsche dropped from ninth place in 1990 to fifth from the bottom in 1991. Power does not release below-average scores; they were obtained independently by *Automotive News*.

Lexus and Infiniti, which entered the market nearly two years ago, tried to put the best light on the tie last week.

"I'd be less than honest if I said we weren't a little disappointed," said Bill Bruce, vice president and general manager of Infiniti Division of Nissan Motor Corp. in U.S.A. "But we think that the tie and the fact that we won the customer-handling portion outright makes it clear that we are doing what we set out to do."

At Lexus Division of Toyota Motor Sales U.S.A. Inc., General Manager J. Davis Illingworth said, "We won it, and that in combination with our top-place finish on IQS (Power's Initial Quality Survey) shows that we've taken a big first step toward getting where we need to be."

The CSI survey has two parts: customer handling and vehicle repair/reliability. Infiniti finished tops in customer handling, four points ahead of Lexus. Lexus beat Infiniti by two points in the repair/reliability category.

But Patano said that companies will not be allowed "to amplify any one aspect of the survey. If we allow that, customers will end up being more confused than helped."

Patano pointed out that the 170-point scores earned by Lexus and Infiniti were the highest ever recorded in the survey, which means that both can claim that they've raised the standard in the industry.

The study included responses from 23,000 vehicle owners and asked questions about the ownership experience during the first 12 to 14 months.

'91 Toyota trucks win Power nod for initial quality

Toyota Motor Sales U.S.A. Inc., whose Lexus Division earlier claimed J.D. Power and Associates Inc.'s 1991 award for car quality, has now won the title for the most trouble-free trucks in the first 90 days of ownership.

Toyota scored 103 problems per 100 trucks and beat Mitsubishi by four points in Power's Initial Quality Survey for compact trucks. Toyota improved considerably from the 1990 model year, when it scored 130 and finished second. Last year's winner, Mazda, dropped from 115 to 130 and fell to fourth.

Other above-average makes were Mitsubishi (107), Ford (127), Geo (140), Chrysler (141) and Nissan (150). Power said that Chrysler had 100 fewer problems per truck in 1991 than it did the year before. The only Chrysler truck is the Town and Country minivan.

In all, trucks averaged 156 problems per 100 vehicles, compared with 181 in 1990 and 169 in 1989.

The Dodge Ram 50 led individual nameplates at 57 problems per 100 vehicles. It was followed by Mitsubishi's pickup (89), Toyota's pickup (94), the Toyota 4Runner (96) and Isuzu pickup (99). Last year's top two finishers were Mazda's pickup (95) and its MPV (118).

Big City Protection Bulletin *Update*

911CLS

CHAPMAN LOCATOR SYSTEM / CELLULAR / LORAN C / SECURITY

The 911CLS by Chapman® goes far beyond the limited locator capabilities of anything you've seen before.

You may have thought it could only be science fiction—something of the future. This *IS* the future, it's here now, and it's on the streets. It's the 911CLS.

Whether moving or parked, the safety of the vehicle is monitored 24-hours-a-day. Any unauthorized movement of the vehicle is transmitted instantly to the 911CLS Monitor Station via the powerful cellular telephone system. Unlike other systems, owner notification is not required to begin recovery, and there is no need for the specially installed tracking devices in police vehicles which can limit response.

The 911CLS goes beyond the limited coverage area of other systems. With its sophisticated government proven LORAN C tracking, the Chapman 911CLS gives Big City Protection anywhere in the continental U.S.A.

This is the most effective Vehicle Recovery System on the streets today. Plus, immediate communication with the Central Monitoring Station gives the driver asistance whenever it's needed, for emergencies, or for notifying local authorities—it's a smart guidance system unique to the Chapman 911CLS.

This interlinked combination of cellular communication; LORAN C monitoring, tracking, and smart guidance; and Chapman state-of-the-art personal and vehicle security is available only from

800-HOLE-IN-ONE

Dodge's 1994 full-sized pickup borrows many styling cues from this concept vehicle, which bowed in January 1990.

POPULAR MECHANICS/JIM BURRI

This 1993 replacement for the Eagle Premier, code-named LH, is big — only a foot shorter than the 1992 Ford Crown Victoria.

four-cylinder engine and a new 24-valve, 2.5-liter V-6.

Mitsubishi vehicles

The Chrysler/Mitsubishi Motors Corp. joint-venture plant in Illinois will build the replacement for the Eagle Talon, Chrysler LeBaron coupe and Dodge Daytona beginning in the 1994 model year. The LeBaron and Daytona will be based on the platform for Mitsubishi's Galant, which will be added to the Diamond-Star line in two years.

The plant now builds the Plymouth Laser/Eagle Talon coupes and the Eagle Summit four-door sedan for Chrysler. The Laser will be dropped at the end of the 1993 model year.

Chrysler will supply a 16-valve, four-cylinder engine in single-overhead-camshaft and dual-overhead-camshaft configurations. Mitsubishi will provide a multi-valve, six-cylinder engine. Manual and automatic transmissions will be supplied by Chrysler.

In the 1992 model year, Plymouth and Eagle dealers will receive a new compact van/wagon from Mitsubishi. Plymouth will call it the Colt Vista; Eagle, the Summit wagon. Mitsubishi will market it as the Expo LRV.

The Plymouth version will replace the Colt Vista wagon. Dodge, which also has sold the Colt Vista, will not receive the new vehicle.

The vehicle is 169 inches long and is powered by a 1.8-liter, 16-valve, four-cylinder engine. Chrysler Corp. will not receive a longer-wheelbase version of the vehicle, which U.S. Mitsubishi dealers will sell as the Expo.

Also in the 1992 model year, the Eagle Talon/Plymouth Laser will have restyled front and rear treatments and body-side cladding.

The next-generation Eagle Summit will arrive in the 1993 model year. Because of the addition of the Galant/Daytona/LeBaron to Diamond-Star, production of the subcompact Eagle Summit four-door will return to Japan. The exact date is undecided, but some model years could be extended and others shortened in the process.

Image makers

The Mitsubishi-built Dodge Stealth is due for a facelift in 1994.

Dodge will get an image boost in the spring of 1992 when it begins selling the limited-volume Viper roadster.

Chrysler plans to eventually build about 5,000 Vipers annually. The car is powered by an all-aluminum, 7.9-liter, V-10 engine. Viper was developed in less than three years at an investment of less than $50 million, according to Lutz.

Midway through the 1992 model year, Dodge will introduce the Daytona IROC R/T. The limited-volume, high-performance model will be powered by Chrysler's 16-valve, turbocharged, 2.2-liter, four-cylinder engine generating 224 horsepower. Lutz says the car will be marketed as "the highest-performance vehicle in the world for under $20,000."

> The company's future — at least as a full-line vehicle manufacturer — could hinge on the success of its new lineup of slightly larger than mid-sized sedans. They will ride on the company's first new platform since 1980.

Light trucks

In the 1994 model year, Chrysler will introduce the T300 full-sized pickup. Lutz claims it will break away from its domestic competitors with "radically different styling." The truck will be powered by a 7.9-liter, V-10 engine.

The company's minivan line, which was revamped for the 1991 model year, will be reworked during the 1995 calendar year, probably for the 1996 model year.

Jeep will receive an upscale companion to the Cherokee sport-utility in the spring of 1992 as a 1993 model. The Grand Cherokee, developed under the ZJ codename, will bow as an upscale, more aerodynamic addition to the Jeep line.

SALES

FROM PAGE 3

1990 this year. Sales picked up in May and June, in the sense that they were not as far behind 1990 as earlier months were, and increases are widely predicted for the fourth quarter. But no one foresees any months as much better than 1990 as war-torn January and February were worse than 1990, and plant shutdowns in the first half to keep inventory under control cannot be made up in the remaining months of this year.

Here are some highlights of the first half:

Big 3

Buick's success has made it the fifth-best-selling car, moving it ahead of Oldsmobile and Pontiac since last June 30. Thanks to Buick, General Motors holds 35.5 percent of the overall car-truck market, down from 35.9 percent.

Driving Buick's increase were the Park Avenue, which caught fire when the redesigned model was introduced in mid-1990, and the Regal, which became a hit when a sedan version debuted last year.

Sales of the Park Avenue were up 16,972 units, and Regal sales were up 17,991, more than making up for a 31,387-unit decline by LeSabre. For the ultra-middle-of-the-road Century, retail sales were off 22 percent in the first half, but fleet business was up 55 percent, for an overall gain of 3,719 units.

Elsewhere in GM, most sales were worse than the market, although a conspicuous exception under the Chevrolet umbrella was the Geo Metro, up 9.4 percent.

Oldsmobile was down 20.1 percent. Thanks to its popularity in

SALES

FROM PAGE 37

fleets, the Cutlass Ciera stayed near the industry norm, down 14.5 percent.

Despite heavy hype surrounding its Malcolm Baldrige National Quality Award and popularity with fleets, Cadillac was down 22.5 percent. It can't be the luxury tax: Allante carries the heaviest tax burden, and Allante sales were down only 9.9 percent.

In trucks, Chevrolet remained No. 2 despite a high-profile effort to knock Ford off its perch. A 10,151-unit increase in small S/T-10 pickups did not cover a 79,143-unit fall in C/K pickup sales.

Arch-rival Ford Division wasn't able to capitalize, however. Explorer's sales increase of 79.8 percent — 54,391 units — did not offset losses by other Ford trucks.

Overall, Ford's corporate share of the car-truck market dipped 1.2 percentage points, while its unit sales were off 18.9 percent.

Ford's strategy of withholding the restyled 1992 Crown Victoria from the fleet market contributed to a 36.7 percent decline for that line; it did a substantial volume in police car sales a year earlier.

Mercury benefited from the addition of the Capri, and Lincoln continued to close the gap on Cadillac, trailing by 8,629 compared to 10,301 a year ago.

Chrysler Corp. managed to retain its 12.4 percent share of the total car and light-truck market, gaining a little in trucks and losing a little in cars.

Dakota and minivans were sources of strength.

Chrysler's Town and Country minivan actually gained 381 units over last year, and the other minivans and Dakota were off less than the market average. Chrysler has pushed a value version of the minivan and repriced and repackaged Dakota to position it better against Ford Ranger.

Dodge Division profited from a market-share gain by Dynasty, a popular fleet car during a period when fleets accounted for disproportionately higher percentage of industry sales. Shadow also was up; Spirit held steady, and Stealth, a new 1991 entry, also helped. Dodge car sales were down only 2.0 percent, but its car-truck tally fell 8.3 percent.

Europe

The priciest specialty brands like Porsche and Jaguar, each down more than 50 percent, led the decline of European brands, but the luxury tax cannot take the full blame. The biggest losers included Audi (43.7 percent), only partly affected by the luxury tax, and Range Rover (32.5 percent), whose sport-utilities are not covered by the levy.

Overall, European imports fell 25.7 percent.

The recession generally clobbered what the luxury tax missed, but Alfa Romeo and Saab provided bright spots, partly because their year-ago sales were low.

Alfa sales were up 50 percent, mostly on the strength of its 164 model introduced a year ago. Alfa also has offered some dealer incentives on its cars.

Saab sales rose 5.0 percent for the six months. Saab enjoyed a particularly strong March and April when offering incentives of low-interest loans and leases.

Japan and Korea

The nine Japanese manufacturers saw their market share rise 1.9 percentage points to 25.3 percent, while Hyundai of Korea slipped from 1.0 percent to 0.9 percent despite getting 14,971 sales from its new Scoupe model.

Sales gains were reported by Infiniti, on the strength of its new G20; Subaru, on the strength of its U.S.-built Legacy; and Suzuki, on the strength of its Sidekick sport-utility that is built in Canada.

Acura, Lexus and Mazda were down less than a percentage point. Only Hyundai, down 18.3 percent, and Daihatsu, down 41.1 percent, sold behind the market average.

Honda Accord continued its reign as best-selling car, and Honda-Acura outsold Chrysler-Dodge-Plymouth-Eagle, making American Honda Motor Co. the No. 3 car-seller in the United States, ahead of Chrysler Corp. A year ago, American Honda was slightly behind Chrysler after six months; this year, it led by 37,450 cars.

Toyota Motor Sales U.S.A. Inc. continues to be the leading Japanese company, but with sales of Lexus and Toyota models down 8.3 percent for the first half, Toyota may not reach the million-unit mark this year. In 1990, Toyota sold 1,058,005 cars and trucks, 521,346 of them in the first six months. It was 43,332 units behind that total as of June 30.

Contributing to this story were Automotive News Staff Reporters Kristine Stiven Breese in Los Angeles, Jim Henry in New York and Joseph Bohn and Phil Frame in Detroit.

'92 Olds ads hype intelligent engineering

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Oldsmobile launched its 1992 Eighty Eight Royale with an ad campaign that signals a new marketing strategy for the entire division.

The new theme line, "The Power of Intelligent Engineering," embraces Oldsmobile's new product-oriented marketing thrust, said Michael Grimaldi, general marketing manager.

The new theme line replaces the "New Generation of Olds" campaign that began three years ago.

"This new campaign theme line is a reflection of our commitment in terms of bringing to the market smart, contemporary vehicles that are clearly a step ahead of our competition in terms of product design, overall value and total satisfaction throughout the ownership experience," Grimaldi said.

He said extensive consumer research indicates that people associate Oldsmobile with five product features:

- Great engines
- Engineering leadership in meaningful technology
- "Step-up" comfort and features
- Vehicles that are solid, well built and safe
- Superior overall ownership experience.

Oldsmobile has based its new marketing strategy on those five attributes which, when woven together, make "Oldsmobile as different from our sister divisions as GM is from the competition," Grimaldi said.

Grimaldi: Olds is different from its sister divisions

He said Oldsmobile believes the new marketing strategy combined with the 1992 vehicle lineup will help the division regain its core market of 35-to-45-year-olds who abandoned Oldsmobile in favor of mid-sized cars.

Grimaldi said he believes the new Achieva, which is scheduled to debut early next year; the Cutlass Supreme; and the Bravada sport-utility will attract the younger buyers. Achieva replaces Cutlass Calais. Oldsmobile launched the campaign last week with ads in *USA Today* and *The Wall Street Journal*.

In keeping with General Motors' promise to make safety an issue in 1992 (see story on Page 41), the ad also highlights the availability of anti-lock brakes and traction control. A driver's side air bag now is standard.

Grimaldi said 16,000 Eighty Eights are either en route to or in dealer showrooms.

The new advertisements highlight five product characteristics associated with Oldsmobile.

Oldsmobile believes the new marketing strategy combined with the 1992 vehicle lineup will help the division regain its core market of 35-to-45-year-olds.

Sidekick (1991)	$300-1,000

TOYOTA (expires Aug. 2)

Corolla	$300-900, based on number sold
Camry, trucks	$300-1,100, based on number sold

VOLKSWAGEN

All cars (1990, no expiration date)	$500-1,500

VOLVO (expires Aug. 18)

740 and 940 (1991)	$1,500

GM revamps incentives to clear out '91s

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

General Motors stepped into the cleanup rebate arena last week with a collection of new, revised or extended incentives for customers. Most of the programs run through Sept. 25.

Chrysler Corp. announced its cleanup rebates a week earlier. Ford Motor Co. will do so when its current programs expire July 30.

Pontiac, whose last consumer incentive program was mostly regional, has gone national with its cleanup incentives by offering consumers $750 to $1,500 on 1991 vehicles. In lieu of rebates, consumers may choose cut-rate financing of 4.9 to 10.9 percent. Pontiac's program expires Sept. 25.

Through July 31, **Chevrolet** is honoring Ford's $500 direct-mail coupon, "Extra Special F-Series $500 Saving Offer," toward the lease or purchase of a 1991 C/K full-sized pickup or cab-chassis.

Chevrolet's previous consumer incentives were extended with some revisions. As with the previous program, the payments range from $300 to $1,500. The revisions include increases to $1,000 from $500 on Geo Prizm, to $750 from $500 on Geo Tracker and to $1,500 from $1,000 on S/T Blazer two-door and four-door (excluding Tahoe LT). Added to Chevrolet's consumer rebate lineup are the Corsica at $500 and the S/T Blazer four-door Tahoe LT at $1,000.

Chevrolet reduced its financing rate from 7.9 to 6.9 percent for contracts up to 48 months. Also, Geo Prizm buyers who take delivery before July 31 qualify for 2.9 percent financing on contracts up to 48 months. The rest of Chevrolet's program expires Sept. 25.

Oldsmobile, which has relied on regional consumer incentives the last few months, did not announce a new program last week. An Oldsmobile spokesman said the division will continue with regional programs. For example, in Michigan, Oldsmobile is offering rebates of $1,000 to $1,500 on its vehicles through Sept. 25.

Buick extended its consumer incentive program, which includes all models except the 1991 Park Avenue, Park Avenue Ultra and Roadmaster Estate Wagon and the 1992 Roadmaster sedan.

Buick rebates range from $250 to $2,000 depending on the option package selected. Interest rates are 4.9 to 10.9 percent. The program expires Sept. 25.

Cadillac extended its $1,500 consumer rebate on the 1991 Brougham until July 31.

Special Correspondent Darrell Pressley contributed to this report.

INCENTIVE WATCH — CUSTOMER INCENTIVES
NEW PROGRAMS

GENERAL MOTORS
Expires Sept. 25 unless otherwise noted. Finance rates in lieu of rebates start at 4.9 percent for Buick and Pontiac, 6.9 percent for Chevrolet. Geo Prizms delivered by July 30 can be financed at 2.9 percent.

Buick (1991)*	
Skylark, Century, Regal, LeSabre	$250-1,000
Riviera, Reatta	$2,000
*Based on option package ordered.	
Cadillac (1991)	
Brougham (expires July 31)	$1,500
Chevrolet cars (1991)	
Cavalier	$300
Geo Metro	$400
Camaro, Corsica, Beretta	$500
Geo Storm, Geo Prizm, Lumina, Caprice	$1,000
Chevrolet trucks(1991)	
G van	$500-1,000
C/K (except 454SS), R/V	$500
Geo Tracker	$750
Astro, S/T pickup, S/T Blazer Tahoe, Lumina APV	$1,000
Other S/T Blazer (1991); V Blazer (1990-91), Suburban (1990-91)	$1,500
Oldsmobile (1991)	
Oldsmobile has regional programs. This is an example.	
Cutlass Calais, Cutlass Supreme, Olds 88	$1,000
Custom Crusier, Bravada	$1,200
Cutlass Ciera, 98	$1,500
Toronado	$2,000
Pontiac (1991)	
Grand Am, Trans Sport	$750
Firebird, Grand Prix	$1,000
Bonneville	$1,500

CONTINUING PROGRAMS

CHRYSLER CORP.
Finance rates in lieu of rebates start at 7.9 percent on minivans, 2.9 percent on other models. Programs expire Sept. 30.

Chrysler Imperial, New Yorker Fifth Ave. (1990-91)	$1,500
LeBaron, N.Y. Salon (1990-91)	$1,000
N.Y. Landau (1990)	$700
Dodge Monaco (1990-91)	$1,500
Spirit, Dynasty (1990-91)	$1,000
Shadow Conv. (1991)	$1,000
Colt Vista (1990)	$1,000
Colt GL (1991), Colt (1990), Shadow (1990), Daytona (1990-91)	$700
Shadow Highline (1991)	$500
Colt base (1991)	$400
Dodge Trucks	
Ram D/W, Ramcharger (1990)	$2,000
Ram van conversion (1990)	$1,750
Ram D/W (1991), Dakota, Ram van, Ram wagon (1990)	$1,500
Dakota, Ram wagon, van, conversion van, Ramcharger (1991)	$1,000
Ram 50, Power Ram 50 (1990)	$500
Ram 50, Power Ram 50 (1991)	$300
Eagle Premier (1990-91)	$1,500
Talon (1990)	$1,000
Talon (1991)	$700
Summit (1991, except base), all Summit (1990)	$700
Summit base 3-dr. (1991)	$400
Jeep Cherokee (1990)	$2,000
Cherokee (1991), Grand Wagoneer (1990-91)	$1,500
Comanche (1990-91)	$1,000
Wrangler (1990-91)	$500
Plymouth Acclaim (1990-91), Laser (1990), Colt Vista (1990)	$1,000
Colt GL (1991), Colt (1990), Laser (1991), Sundance (1990)	$700
Sundance Highline (1991)	$500
Colt base (1991)	$400
All minivans (1991)	$500
All minivans (1990)	$1,500

HYUNDAI (expires Oct. 2)

Excel (1990-91)	$500-1,000
Sonata (1990-91, except SE)	$1,000
Scoupe (1991, except SE)	$750
All models	$300 to military personnel
All models	$1,000 if Hyundai is traded

FORD MOTOR CO.
1990-91 models. Finance rates in lieu of rebates are 4.8 percent on Festiva, Escort (except Pony), Tracer; 7.9 percent on others. Terms are 24, 36 or 48 months. All incentives expire July 30.

Ford Festiva, Escort Pony and LX, hatchbacks, Mustang	$500
Tempo	$600
Thunderbird	$600-750
Escort wagon, GT	$750
Taurus	$750
Taurus SHO	$1,600
Probe	$1,000
Crown Victoria (1991)	$1,500
F series, Econoline (1991)	$500
Ranger, Aerostar, F series (over 8,500 gvw)	$1,000
Econoline E150 (1990, with conversion pkg.)	$1,500
Econoline E150 (1991, with conversion pkg.)	$1,000
Bronco	$1,500
Mercury Tracer sedan	$500
Topaz, Capri	$600
Cougar	$600-1,000
Tracer LTS and wagon	$750
Sable	$750
Grand Marquis (1991)	$1,000

MAZDA (expires Aug. 2)

Trucks (1991)	$500-1,300*
*Based on region	

SAAB
3.5 percent financing on 9000 models (1991) for 24, 36 or 48 months with downpayment of 25 percent. Expires July 31.

SUBARU (expires Oct. 2)

Loyale 4wd (1991)	$500
Legacy (1991)	$1,200
XT, XT6 (1991)	$2,000

MERCEDES
FROM PAGE 1

maker, Hubbert said.

"He wants us to come as soon as possible and to build cars in Mexico and sell them to the United States," said Hubbert. "But we will be very careful."

Mercedes will start its Mexican passenger-car program cautiously next year by exporting 300 to 500 mid-class cars to the country. Although only local carmakers are now permitted to import into Mexico, permission to import the cars will be granted in exchange for Mercedes' commitment to expand commercial vehicle production to include a new small bus chassis under 8.8 tons, Hubbert said.

Until now, Mercedes has been allowed to import diplomatic vehicles only.

"We'll start in 1993, maybe with a semi-knockdown assembly line for the Mexican market, bringing some suppliers with us, buying parts from Mexico to make money and pay for the imports," Hubbert said. "And then, nobody knows what will happen with the North American free trade agreement" still under discussion.

"We're not ready yet (to export from Mexico), but nobody knows what will happen in five or 10 years," said Hubbert. "We need some global sourcing and some global production."

One impetus for shifting production to Mexico is the rising cost of production in Germany. Wage rates for automakers here are among the highest in the world, and the powerful German metalworkers' union has succeeded in regularly reducing the length of the workweek in recent contracts.

The prospect of shifting output to Mexico could help the union's discussions with Mercedes become a "little bit more serious," Hubbert said.

The company's Mexican plant, in Santiago Tianguistenco, built 6,000 trucks over 8.8 tons last year and generated revenue of 300 million marks (about $165 million). Production is expected to rise to about 9,000 in 1991.

Mercedes expects to invest about 100 million marks (about $55 million) over the next five years for doubling commercial-vehicle capacity and for setting up semi-knockdown car production, the company said.

"We have very good performance in our truck factory," said Hubbert. "It is in very good shape and we are increasing production. Maybe they will reach 20,000 trucks in the next few years."

Soviets to M-B: Let's build Gelaendewagens

Mercedes-Benz AG has been asked by Soviet authorities to license production of its Gelaendewagen off-road vehicle, says Jurgen Hubbert, head of Mercedes' passenger-car division.

Mercedes already has a deal to assemble buses near Moscow beginning in 1993 and is discussing the possibility of producing its W124 mid-class line of cars in the Soviet Union.

Hubbert said the Gelaendewagen proposal emerged recently from the Soviets' Sterlitamak machine-tool collective in the city of Sterlitamak, which is located in the Ural Mountains.

"They are very interested," he says. "They are from a military factory, they have money and skilled people, and I think they can do it."

Proposed volume is 25,000 units annually, more than doubling the number of Mercedes Gelaendewagens now produced in the West. Production could begin soon.

"If we are allowed to bring parts in we can start it at the end of next year," he says. "It is in discussion."

The Gelaendewagen, which was introduced in 1979, is produced at Steyr-Daimler-Puch's factory in Graz, Austria, at a level of about 10,000 units annually.

Mercedes and Japan's Mitsubishi Motors Corp. have been discussing a joint venture to build a replacement for the Gelaendewagen, but Hubbert says the German company is talking to other potential partners as well.

"We only have a sales and production of about 10,000, and that is not a situation where you can survive for very long," he says.

"I think we need a partner to bring it up to a capacity like the (Mitsubishi) Pajero — 120,000 units a year — something like that. We are in discussions with . . . some others. We are interested because we need a successor in the mid-'90s," he says.

Although Mitsubishi Group and Mercedes' parent, Daimler-Benz AG, have been discussing possibilities for global cooperation, Hubbert sounded pessimistic about prospects on the passenger-car side.

"At this time we have no ideas," he says.

However, Hubbert revealed that Mitsubishi had sought to produce its Galant model at Mercedes' new plant in Rastatt, Germany.

"They asked us if we could give them capacity for 60,000 or 100,000 cars to be sold in Europe, and we told them we had no capacity," he said.

Plants work full week; output rises

By Bob DeMayer
SPECIAL CORRESPONDENT

U.S. car and truck production shot up like fireworks last week following the Fourth of July holiday.

Auto manufacturers scheduled 85,573 cars last week, 62.95 percent above the preceding holiday week and 20.47 percent above last year.

Year-to-date, U.S. car production is 2,906,593, down 13.17 percent from 1990.

Truckmakers planned to build 42,387 units last week, 22.88 percent above the prior week and 0.84 percent above the comparable week last year.

So far this year, 1,739,989 trucks have been assembled, 20.16 percent behind 1990.

Automakers split last week's estimated production as follows: General Motors, 54.90 percent; Chrysler Corp., 16.83 percent; Honda of America Manufacturing Inc., 10.70 percent; Toyota Motor Manufacturing U.S.A. Inc., 4.97 percent; New United Motor Manufacturing Inc., 4.91 percent; Diamond-Star Motors Corp., 3.39 percent; Mazda Motor Manufacturing (USA) Corp., 3.29 percent; and Subaru-Isuzu Automotive Inc., 1.01 percent.

All Ford Motor Co. plants and the Nissan Motor Manufacturing Corp. U.S.A. plant were closed for vacation last week.

GM scheduled one shift of overtime last Saturday at its Detroit truck plant and Flint, Mich., truck assembly line (No. 2). The Detroit plant produces commercial, recreational and specialty vehicle chassis. The Flint plant produces the GMC Suburban.

Ford announced that the Edison, N.J., truck plant will be on a single shift this week because of a shortage of orders. The plant produces the Ford Ranger.

Chrysler scheduled two shifts of overtime last Saturday at its St. Louis (No. 2) minivan plant. The plant produces the Chrysler Town & Country, Dodge Caravan C/V (extended cab), Dodge Grand Caravan and Plymouth Grand Voyager.

CANADA: Canadian car production was estimated at 16,078 last week, up 24.43 percent from the prior week that included the Canada Day holiday, but down 13.01 percent from the year-ago week.

Truck production last week was estimated at 14,239, down 0.14 percent from the prior week but up 72.91 percent from the year-ago week.

Year-to-date, truck production in Canada is down 8.61 percent.

GM scheduled overtime last Saturday at its Oshawa, Ontario, truck plant. The plant produces the Chevrolet full-sized pickup and GMC Sierra.

DUMPING

FROM PAGE 1

said it expects the Expo LRV to sell for less than $11,000.

The dumping case moved forward last week when the International Trade Commission ruled 3-0 to continue investigating.

The definition of what is a minivan is crucial to any decision on whether harm is being done to the Big 3. Last week, the Big 3 amended their petition to dispel any doubt that the Expo LRV was to be included. Its initial petition, filed May 31, defined a minivan as a vehicle that allowed passengers to walk from the front and had rear-side doors that provide wide access to the cargo area. It added the qualifier "generally" to cover the Expo, which does not have the walk-through feature.

Mitsubishi responded with letters to the Commerce Department and the International Trade Commission, saying the amended language still doesn't cover the Expo.

In a separate letter July 3, Mitsubishi said Chrysler has asked Mitsubishi several times to change the design of the Expo LRV and create a walk-through feature.

John Greenwald, a Washington attorney handling the Big 3 dumping complaint for the Motor Vehicle Manufacturers Association, said the design request was an old issue and not related to the dumping issue.

He also said that Chrysler's effort to get the Expo LRV for a low price is standard business practice for any company trying to get low prices from its supplier. He said wholesale prices to dealers are the issue in a dumping dispute, not the price between the manufacturer and a sales arm.

Mitsubishi Motor Sales of America has said it expects to sell the seven-passenger Expo, which Chrysler won't get initially, for less than $14,000. The vehicle is similar to Nissan's Axxess, a van/wagon hybrid that flopped in the United States partly because of its high price tag. The Expo and Expo LRV go on sale Aug. 1; the Plymouth Colt Vista and Eagle Summit wagon are expected to go on sale later this fall.

The Big 3, through the MVMA, said they were pleased with the commission's decision to pursue the case. Mazda, Toyota and Mitsubishi said in separate statements that they were disappointed but confident they would prevail as the case progresses.

It now goes to the Commerce Department, which will decide by November if the dumping charge has merit. If Commerce says yes, the trade commission will determine damages to the domestic industry and could impose additional tariffs.

Ford Motor slates price hike of 4.7% on '92 cars

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Ford and Lincoln-Mercury dealers received pre-introduction prices on 1992 cars and trucks last week. According to an *Automotive News* analysis, car prices are scheduled to rise an average of $796, or about 4.7 percent.

At this time last year, Ford floated an average hike of $581 or 3.9 percent on 1991 models, but later scaled it back a bit. Some dealers say it is likely that Ford will do the same this year.

But Ford has sweetened its warranty from one-year/12,000 miles to three years/36,000 miles on 1992 Ford and Mercury cars and Ford light trucks. That is a expensive program, and it may cause Ford to stick with its preliminary pricing this year.

Ford saved some of its biggest price hikes for light-duty trucks (see accompanying story).

This *Automotive News* car price analysis compares base sticker prices and does not account for year-to-year changes in standard equipment.

Price increases on Ford Division cars range from $263 on on the Festiva L two-door to $2,224 on the Tempo GLS four-door.

Prices dropped on Probe LX and GT, by $140 and $275 respectively. Some dealers think Ford may have reduced the prices on its slow-selling Probe models because an all-new Probe is due next summer as a 1992½ model.

Ford said it will announce prices for the Crown Victoria later.

Prices increased across the board for Lincoln-Mercury Division, ranging from $346 on all Tracers to $2,318 for the Topaz XR5 two-door. Capri and Grand Marquis prices were not announced.

The factory informed dealers that complete price lists, including option prices, will be mailed this week.

Some Tempo and Topaz models have the

FUTURE PRODUCT

ASIA

Politics, costs may slow down product intros ever so slightly

Third in a series of articles exploring product plans of the U.S. Big 3 and Asian and European automakers.

Toyota's popular Corolla has been redesigned, but U.S. buyers must wait until fall 1992; this right-hand-drive version is designed for Japan's market.

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Pressed by mounting trade tensions and expensive safety, fuel-economy and clean-air requirements, Asian automakers may back off on their breakneck pace of product introductions for the United States — but not by much.

Four-year cycles won't necessarily stretch to five or six years. But replacement models that are scheduled for the fall may simply arrive the following winter or spring. As such, product introductions will be further scattered throughout the year, putting another nail in the coffin of the traditional fall new-model introduction.

Companies will continue with their customary four-year cycles where they are most needed, especially in small-car and sporty segments. But in areas where the Japanese tend to be newcomers, such as the luxury segments, the cycles will be longer.

Financial and political pressures will likely drive some of the change, according to Tom Matano, vice president of product design and development, at

Dealers balk at Chrysler's carryover allowance

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. has broken its long-held practice of shunning a carryover allowance on previous-year vehicles in dealers' hands when the new model year begins.

It is offering its dealers the choice of a 5 percent carryover allowance on 1991 models in inventory Oct. 1 or participation in consumer and dealer incentive programs that continue through Sept. 30.

It is the first time in 13 years Chrysler has used a carryover allowance, and the response has not been overwhelming. Virtually all of Chrysler's 5,000 dealers have chosen the incentive programs.

Chrysler is the only one of the Big 3 that has consistently rejected demands by its dealers and the National Automobile Dealers Association to provide a carryover allowance at the end of the model year.

But this year, Chrysler has notified dealers it will pay a 5 percent stock allowance on vehicles in inventory Oct. 1 in lieu of dealer participation in the third "Rediscover American Values" incentive program that runs through Sept. 30.

While Chrysler dealers have long sought a carryover allowance, the company's current move apparently is not spawning widespread dealer interest. Dealers said participation in the consumer and dealer incentive programs that began July 1 is more advantageous than the October carryover payment.

Chrysler spokesman Tom Jakobowski said the number of dealers

Mazda announcement on luxury arm appears imminent

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Mazda Motor of America Inc. has apparently received a green light from Japan and will launch a new luxury division for the 1995 model year.

An announcement is expected well before the company's annual dealer meeting in September, possibly within two weeks. Two Mazda employees have pointed to an Aug. 6 announcement date.

As with Acura in 1986 and Lexus and Infiniti in 1989, Mazda will likely begin with two products. In Mazda's case, a V-8 flagship and a V-6 "entry-level" sedan are expected in 1994 as 1995 models. A coupe based on the flagship could follow the next year.

The go-ahead comes more than two years after Mazda disclosed it was studying the prospect of creating a second sales channel. The effort has operated under the codename Pegasus, but sales will likely start under another name.

The company, which has a much smaller U.S. presence than Honda, Toyota and Nissan, has been weighing whether it should mimic their luxury operations and whether the market can absorb another luxury franchise. Discussion has focused on distribution, dealers and facilities as well as products and timetable.

Acura, Lexus and Infiniti have required dealers to operate from facilities devoted exclusively to selling and servicing those cars. Mazda, conscious of the high costs demanded by stand-alone operations, appears to have settled on a compromise that will ease some of the burden on dealers.

One source said Mazda will offer the new franchise to both Mazda and non-Mazda dealers. The company will require dealers to

The end for Excalibur?:
A bankruptcy trustee is taking bids for the closed maker of neo-classic cars, but would anyone buy them? Story on Page 3.

R.I.P. EXCALIBUR?

Maker of neo-classics attracts buyers, but former owners say market is dead

By Sally Garbo Wedde
SPECIAL CORRESPONDENT

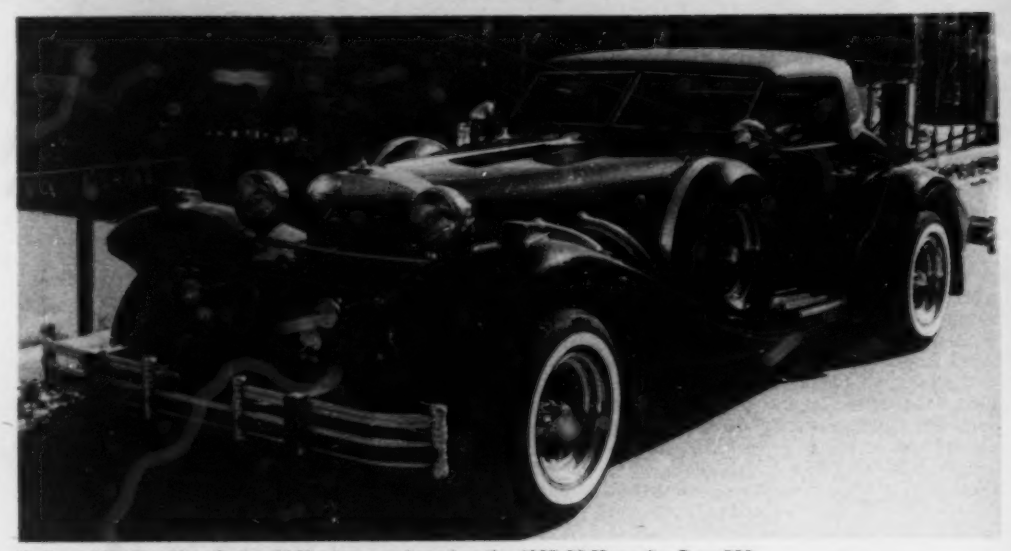
WEST ALLIS, Wis. — The bankrupt and closed Excalibur Automobile Corp. has a handful of potential buyers, even though the last two owners say the U.S. market for modern versions of old cars is dead.

"I think the Excalibur was a statement car, and there are now alternatives to make that same statement," said Henry Warner, who owned 58 percent of the company from September 1986 until it filed for Chapter 7 in bankruptcy court Feb. 20.

Warner said it's tough to sell the $75,000 Excaliburs to U.S. buyers: "Everything looks like the Sable or Taurus in the last three years. People are getting used to homogenized cars."

William C. "Steve" Stevens, who founded the company with his brother, David, in 1964 and ran it until 1986, said the generation of people who might buy an Excalibur is dying. Potential buyers — people who remember the 1930s style cars Excaliburs were based on — are growing scarce, he said.

But Chuck Johnson, a Maserati dealer in Fort Lauderdale, Fla., said he was surprised when the Excalibur plant closed. He used to sell 10 to 12 Excaliburs a year, and hopes to sell the car if production resumes.



Styling of the Excalibur Series IV Phaeton was based on the 1937-38 Mercedes-Benz 500.

Johnson thinks the business will be sold to someone in Europe or Japan because those markets accounted for about half of Excalibur's production.

Scott Dennison, who directed engineering and served briefly as Excalibur president in the Warner years, views Excalibur as a niche car. When the company filed for liquidation, he was hoping to pro-

Mitsubishi could become sole Diamond-Star owner

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Mitsubishi Motors Corp. says it is talking to Chrysler Corp. about purchasing "all or part" of Chrysler's stock in their joint U.S. assembly plant.

Until now, Mitsubishi in Japan has declined comment on ongoing talks with Chrysler about the future of Diamond-Star Motors Corp., their 50-50 venture in Normal, Ill. Mitsubishi's statement came after press reports last week that said Chrysler has agreed to sell its entire stake to Mitsubishi.

Mitsubishi officials in the United States have previously said the talks center on Chrysler giving up equity in exchange for Mitsubishi's help in paying product development costs.

Both companies are preparing for production of the next generation of models at Diamond-Star. The plant is scheduled to begin building the Mitsubishi Galant in model-year 1994. Coupe versions will be sold as the Chrysler LeBaron and Dodge Daytona. At about the same time, the plant will begin building the next-generation Mitsubishi Eclipse, which also will be sold as the Eagle Talon.

Development costs of the two Mitsubishi vehicles alone are estimated at about $600 million.

Chrysler has been looking for ways to generate cash to support a wave of new products.

Diamond-Star is capitalized at $199.5 million. Some reports say Chrysler asked for $100 million, or half of the face value, but analysts here expect Chrysler to look for a much higher figure.

Nissan plans to raise dealer margins

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — During the next two years, Nissan plans to raise the dealer margins on its vehicles by an average of one percentage point, according to Robert Thomas, Nissan Division general manager.

The change follows a request from Nissan's dealer council. Comparisons of Nissan dealer margins (which Nissan describes as the percentage difference between what a dealer pays for a car and the suggested retail price) reveal that in many cases, Nissan's margins are not as high as those of its major Japanese competitors.

For example, margins, or dealer discounts, on the new Nissan Sentra range from 6.15 percent to 11.26 percent after the holdback of two percentage points. The Toyota Tercel has dealer discounts of 8.52 percent to 14.00 percent, with no holdback.

Stanza margins are 11.77 percent, and the margins on the Maxima are 13.30 percent. Both have a holdback of 2 percentage points. The Honda Accord has a 16.00 percent dealer discount with no holdback.

Thomas takes issue with some of those figures but admits that Nissan margins don't always meet those of other import companies. "Dealers asked us to increase margins relative to the competition — namely Honda and Toyota. We've agreed to do so. Now we're looking at how to do it, on which models and in what order," he says.

Thomas: working with dealers

He adds that Nissan has been trying to address that problem for some time. "Over the last year, each price increase has taken dealer margins into account," Thomas says.

There are several ways to increase margins. One is to raise the sticker price while keeping the dealer price unchanged, although there's no guarantee that consumers will pay the higher price. Another way is to reduce the price that the dealer pays but keep the sticker price unchanged. Not surprisingly, dealers prefer the latter. Variations of those themes also increase the margin, or dealer discount.

"Every time they've had a price increase, they've increased the margins. But it's most important to be competitive at sticker. They have to make the spread larger, but they can't do that just by raising the sticker price," says Mark Lacher, general manager at Koeppel Nissan in Woodside, N.Y.

> "Sure, if dealers had a choice, they'd have us do it all at the wholesale level. And we'll look at that, but if we can't do that because of other expenses, some of it may have to come from retail."
>
> **Robert Thomas**
> Nissan general manager

Other dealers agree. "We're not looking for higher prices but for them to hold the wholesale price a little better," says Mark Parkinson, vice president and general manager at Tustin Nissan in Tustin, Calif.

Thomas says he understands

Jilted ZR-1 buyer awarded $105,500 from dealer

By Bob DeMayer
SPECIAL CORRESPONDENT

Rosenthal Chevrolet must pay a customer $105,500 for not delivering a Corvette ZR-1 after accepting his down payment, according to an Arlington County, Va., circuit court jury.

The plaintiff, Ralph L. Bradley, accused the dealership of breaking two sales contracts for the purchase of a Corvette ZR-1.

The jury found the Arlington dealership guilty on two counts. On the count of fraud and deceit, it granted Bradley punitive damages of $76,500 and compensatory damages of $19,000. On a count of fraudulent inducement to contract, the jury granted the plaintiff punitive damages of $5,500 and compensatory damages of $4,500.

Glen Mitchell, attorney for Rosenthal Chevrolet, said he will appeal the case because the dealership denies any wrongdoing.

Two other Rosenthal Chevrolet customers also filed suits accusing the dealership of breaching their contracts to purchase Corvette ZR-1s. These suits have been settled out of court for undisclosed amounts, according to Bradley's lawyer, John Drury.

Bradley demanded that his case be heard before a jury.

Bradley said in his suit that in October 1988 he made a nonrefundable $5,000 down payment to Rosenthal Chevrolet to be the dealership's first ZR-1 customer. ZR-1 models didn't reach the dealership until November 1989 because of production delays.

Bradley agreed in that contract to pay $2,000 over what was then the ZR-1's $58,000 sticker price, according to Drury.

As Bradley waited for the ZR-1 to arrive, demand for the 380-horsepower sports car skyrocketed. Before the first ZR-1 arrived at Rosenthal Chevrolet, Bradley was told he would have to sign a new contract agreeing to pay $7,500 above sticker because of the strong demand for the car.

Bradley said he signed a second contract, but even then he didn't get the first ZR-1 to arrive at Rosenthal. According to court records, that car went to another customer who paid $16,000 over the sticker price.

Bradley then purchased a ZR-1 from another dealer.

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in May at 1400 Woodbridge, Detroit, MI 48207-3187. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 965 E. Jefferson, Detroit, MI 48207-3185.

Corrections, clarifications

- A story in the July 1 issue incorrectly called the Buick Park Avenue "rebate free." In April, May and June, Park Avenue carried dealer incentives of $500 to $1,500, based on the number sold.
- A story in the July 15 issue gave an incorrect age range for Oldsmobile's core market. The range is 35- to 55-year-olds.
- A story in the July 15 issue misspelled the name of Ramon A. "Ray" Von Drehle, who is retiring as executive director of legal affairs for Ford Motor Co.'s Financial Services Group on Oct. 1.
- A July 15 story failed to note that General Motors has removed the $100 deductible on the three-year/36,000-mile warranty on 1992 Chevrolet, Pontiac, Buick, Oldsmobile and GMC models.

AUTOMOTIVE NEWS/JOE WILSDEN

Louis Lataif, who will leave Ford in September, was the second youngest person to be named a vice president at the company.

Insiders say Lataif isn't only Ford exec who'll have new job

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The resignation of Louis Lataif at Ford Motor Co. is expected to be only the start of executive shuffling at the No. 2 automaker.

Company insiders and well-placed outside observers say political infighting is well beyond round one as ambitious Ford employees try to position themselves for promotions or other outside opportunities with the anticipated retirements of Chairman Harold Poling and President Philip Benton.

Poling, 66, agreed to postpone his retirement and serve as chairman for three years when his predecessor, Donald Petersen, stepped down early last year.

Benton, 63, has been ill and is expected to retire when he turns 65 in December 1992.

"Ford is known to be more political than GM is at the top level," said a consultant who works closely with Ford. The consultant, who did not want to be identified, said, "When opportunities start coming up, executives like Lataif will take a real close look at them, particularly if they don't see themselves moving up."

Lataif, vice president for quality and marketing, will leave Ford in September after 27 years with the company to become dean of Boston University's School of Management.

Lataif says he does not know if his position will be filled, but James Paulsen, director of the vehicle controls and powertrain products strategic business unit, has been named executive director of corporate quality. Paulsen, 52, a 20-year Ford veteran, will assume his new duties Aug. 1 and report to Lataif.

Paulsen's early years with the company were basically spent in climate control engineering. He also was plant manager at Ford's Saline, Mich., plant.

Lataif describes Paulsen as a "top-notch engineer and a man on the move."

Lataif, too, was a man on the move during the 1980s. Observers thought there was no limit to how far the affable sales executive could rise — even to the chairman's office.

Paulsen: fills quality post

Lataif was named a vice president at age 42. Company officials say only Lee Iacocca, former Ford president and current Chrysler Corp. chairman, was named a vice president at an earlier age, 39.

Lataif's prestigious appointments included general manager of Ford Division, vice president of sales operations for North American Automotive Operations and president of Ford of Europe Inc.

But the 52-year-old executive was called back to Dearborn in April to fill the newly established post of vice president for quality and marketing after his three-year stint in Europe, and it was hardly seen as a promotion by his colleagues at company headquarters.

"When they brought him back and put him in this made-up position, it was obvious something was not going right," said an executive in Ford Division's sales office. "Lataif was well liked and respected for his abilities, but people also recognized that the European stint did not work out, so there was no obvious place left for him."

Lataif's predecessor as president of Ford of Europe, Alexander Trotman, is executive vice president of North American Automotive Operations and is believed to be among the frontrunners to move into one of the top executive spots when Poling and Benton retire.

Extra day pushes early July sales above '90

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Sales of new cars and light trucks increased in early July, but it took an extra selling day to do it.

Deliveries of 324,432 cars and light trucks were 3.4 percent above the year-ago total. But the daily selling rate declined 9.5 percent because there were eight selling days in the July 1-10 period this year and seven last year.

Buick, Oldsmobile and Toyota Motor Sales U.S.A. Inc. reported major gains. Chrysler Corp.'s volume also improved.

Buick's daily selling rate jumped 31.8 percent in early July, as unit sales grew 53.2 percent to 15,427. Oldsmobile sales were 16,225, an increase of 34.4 percent and a daily-rate rise of 16.4 percent.

At General Motors, early July car and truck sales grew 8.6 percent, to 134,705, but the General's daily selling rate was down 5.0 percent. For the first half, GM sales were down 15.8 percent.

Toyota Motor Sales reported 10-day sales of 21,341 cars and light trucks, a jump of 38.8 percent over last year. Toyota's daily selling rate rose 21.4 percent.

Toyota attributed the increase to sales of new models, including the new Tercel and Paseo. Sales at its Lexus Division, which has a new SC400 coupe, shot up 53.9 percent. Dealer incentives also spurred sales of Toyota models.

At Chrysler, car and truck sales rose 12.6 percent to 41,318. Allowing for the extra selling day, Chrysler's daily rate dropped 1.4 percent. True to form, Chrysler's light-truck sales were much stronger than car sales. *Automotive News* estimates 10-day sales for Chrysler and for most imports.

Ford Motor Co. had the poorest year-to-year performance of the Big 3, with unit sales down 9.0 percent and the daily rate off 20.4 percent. Ford's six-month sales were down 18.9 percent, also the biggest drop among the Big 3.

Aside from Toyota, sales of most of the Japanese-based companies were about average or below average for the period.

Unit sales for American Honda Motor Co. Inc. increased 5.0 percent to 14,815, but the daily selling rate fell 3.1 percent. More U.S.-built Hondas and fewer imported Hondas were sold in early July, but the combined totals for each year were about the same. Acura sales were up 21.6 percent.

Likewise, sales for Nissan Motor Corp. in U.S.A. rose 3.6 percent, but the daily rate dipped 9.3 percent. Infiniti's 838 sales more than doubled last year's 359.

Sales for Mazda Motor of America Inc. fell 14.8 percent, and the daily rate was down 25.5.

Mazda's six-month sales were down 0.6 percent, much better than the industry's 15 percent plunge.

Honda tops Toyota in sales per dealer

Honda jumped ahead of Toyota to lead the *Automotive News* car and light-truck sales-per-dealer calculation for June.

Honda, which sells only cars, averaged 69 sales per outlet. Toyota averaged 66 car-truck sales per store. Toyota led in May.

Saturn was third with 62 sales per dealer in June. Saturn has grown from 58 outlets on Jan. 1 to 108 in June.

In June's top 10, five are car-only brands and seven are Japanese makes.

The sales per dealer averages measure the relative value of a franchise by showing the relationship between the number of new-vehicle sales and the number of dealers selling those vehicles.

TRUCK INDUSTRY

Pre-buying takes wind out of Class 8 sails in June

By Joseph Bohn
TRUCK EDITOR

Class 8 commercial truck orders fell through the floor in June in the aftermath of heavy pre-buying to avoid price hikes on 1992 models.

About 6,000 net new orders for Class 8s were placed in June, down from 8,651 a year ago, according to Rothschild Inc., a New York investment firm.

The June falloff followed a surge in May that saw orders climb to 11,869 units compared to 10,740 for the year-earlier period.

Industrywide price hikes of about 4 percent caused the heavy pre-buying in Class 8.

Frank Prezelski, an analyst with Rothschild, said that despite the volatility in orders, "the uptrend in the market is still under way." It is occurring more slowly, though, than originally appeared to be the case.

Ford Motor Co.'s Heavy Truck Operations, looking at a longer 60-day trend for Class 4-7, estimated May/June medium duty orders at 13,000 compared to 27,000 a year ago.

Terry Huber, Ford Heavy Truck Operations dealer sales manager, feels that medium duty sales are softer than those in Class 8 because smaller businesses, which comprise the heart of this market, are in a better position to postpone purchases than the over-the-road and linehaul operators in Class 8.

More difficult to explain, Huber added, is the recent slowdown in the overall low cab forward segment.

The medium duty low cab forwards accounted for 15.8 percent of Class 4-7 in 1988 but slipped to 13.5 percent during the first six months of calendar 1991, according to Motor Vehicle Manufacturers Association data.

The whole industry is watching this segment carefully because individual manufacturers, particularly major medium duty players such as Ford and Navistar International, have to make major product decisions, based on how they think the segment will grow.

Ford switched production of its medium duty Cargo models from Brazil to Louisville, Ky.; and, as part of a strategy to relaunch the vehicles, did not increase prices on 1992 models, as with its other medium and heavy trucks.

"We have aggressive plans, and are working on some pretty sizeable orders on Cargo," Huber said.

Prices on conventional medium duties typically increased in the 3 to 4 percent range, industrywide.

Some manufacturers still have price protection programs on 1992 models that will impact medium duty sales over the next few weeks.

Chevrolet and GMC Truck, for example, are price-protecting dealers on early 1992 medium-duty conventional truck orders placed by Aug. 9.

Chevrolet and GMC have gone from standard bias-ply tires and disc-style wheels to 100 percent Michelin radials and heavier-duty cast-spoke-style wheels on all their conventional medium-duties.

The radials alone cost about $450 more. But through Aug. 9, dealers can order a new model without the costlier tires and wheels. In essence, they can get a 1992 truck at a price within $70 of a 1991 model.

The extra $70 covers a sophisticated new wiring harness and synthetic rear-wheel lubrication, also standard on the 1992s.

General Motors officials anticipate that dealers will close a lot of transactions within the next three weeks, based on the availability of 1992 models at near-1991-model prices.

The addition of four standard items to GM medium-duties this year is somewhat unusual. Last year, GM added only one standard item to the vehicles.

Meanwhile, retail sales of medium and heavy trucks in June and the first six months of 1991 were extremely soft.

Class 4 sales, off 17.6 percent in June from a year-ago, showed some improvement over their 19.5 percent decline during the first six months of this year, according to the Motor Vehicle Manufacturers Association.

GM has been gearing up slowly in that segment with its HD3500, and, together with Ford Motor Co., accounts for just about all its sales.

Class 4 appears to be sapping at least the conventional side of the Class 5 segment. The only trucks still doing well in Class 5 are the low-cab-forward models, such as those of importers like Isuzu Truck, Nissan Diesel, Mitsubishi Fuso and Hino.

Overall, Class 5 sales were down 81.7 percent in June and 48.4 percent for the first six months, according to MVMA.

Class 5 will likely get a further jolt as a result of Chevrolet and GMC dropping the C-5HO42 model from its 1992 lineup.

That was GM's only Class 5 conventional model. It carried gross vehicle weight ratings of 16,650 to 22,000 pounds. To offset that, Chevrolet and GMC have been emphasizing sales of their Isuzu-built low-cabover Tiltmaster and Kodiak models.

Class 6 sales dropped 48.4 percent in June and 39.4 percent for the first six months of this year.

Class 7 sales were off 27.6 percent in June and 10.5 percent for the first six months. Class 8 was down 34.2 percent for the month and 23.1 percent for the first half.

Volvo GM to close Utah assembly plant

By Joseph Bohn
TRUCK EDITOR

Volvo GM Heavy Truck Corp. will permanently shutter its Ogden, Utah, assembly plant by year's end to cut costs.

Ogden is Volvo GM's smallest assembly plant. Thage Berggren, company president, said a small-capacity plant doesn't make "economic sense in the heavy-truck industry today. We determined that closing the Ogden plant was our best alternative to reduce fixed costs and lower the break-even point."

But aside from cutting overhead to stanch the company's flow of red ink, the closure also reflects its more sober view of the market and its own potential for growth.

Following Volvo White's merger with General Motors' heavy-truck operations in 1987, Volvo GM Heavy Truck went on a production capacity expansion binge in anticipation of substantial growth.

But for the first six months of 1991, its Class 8 sales of 5,202 vehicles were down 28.4 percent, and its share of the Class 8 market dropped to 10.8 percent from 11.6 percent a year earlier, according to Motor Vehicle Manufacturers Association data.

The cyclical and highly competitive Class 8 market has gone through a 20-month sales decline.

Industrywide, U.S. retail sales dipped from 145,000 in 1989 to 121,000 in 1990 and are projected to drop to about 100,000 this year.

Volvo GM officials are looking for only a modest recovery to about 120,000 sales in calendar 1992.

The Ogden plant currently produces 12 Class 8 trucks a day and has 362 employees.

The company plans to transfer Autocar production at Ogden to its newest Orrville, Ohio, plant. Up to 40 Odgen employes may be transferred to the Ohio plant. The company also plans to transfer WhiteGMC models built at Ogden to its Dublin, Va., plant.

Volvo GM has more than enough capacity to meet current projected market demand.

Its Ohio plant, which has a daily capacity of 50 trucks on two-shift operations, is currently producing 20 vehicles a day. The Virginia plant has a daily capacity of 60 trucks on two-shift operations and is currently producing 36 a day.

Production at Ogden will drop to 10 trucks a day in October in preparation for the transfers. There will be no layoffs at Ogden when production is reduced in October. A skeleton staff will continue to work at the plant in early 1992 to complete its close-down, prior to its eventual sale.

BRIEFS

Kelsey-Hayes links wheel, brake units

ROMULUS, Mich. — The Kelsey-Hayes Group formed the Heavy Duty Truck and Trailer Brakes Business by combining its medium- and heavy-duty wheel-end and brake operations here with those of Dayton Walther in Dayton, Ohio.

The operation, headquartered in Dayton, produces cast spoke wheels, hubs, drums and rotors for medium and heavy trucks and trailers; anti-lock brake systems and hydraulic brake components for medium trucks, and landing gear for heavy-duty trailers.

The Heavy Duty Truck and Trailer Brakes Business is also working with truckmakers on Class 6 and 7 ABS, according to Steven M. Palm, president.

He projects 1991 sales of $88 million and has a goal of $137 million in sales by 1997.

Ford tinkers with truck options

DETROIT — The Detroit Diesel series 60 engine will be switched from a special to a regular production option in Ford Heavy Truck's L-9000 series in August.

Ford also plans to offer a liquid propane gas conversion on its 429 electronically fuel-injected gas engine for medium-duty trucks late in the 1992 model year.

The company dropped it a while ago because of emissions problems, but plans to reintroduce it.

After dropping the gas engine in its F-800 series, Ford now designates remaining gas engine models in the 600 and 700 series as F600G and F700G.

Germany's strength pushes Europe to sales gains

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Pulled along by the German locomotive, new-car sales in Europe rose 7.6 percent in June and, at midyear, were slightly ahead of the 1990 pace that resulted in a record 13.4 million sales for the full year.

But the overall figures belie the distress in several important markets, notably the United Kingdom and France.

German sales, including the five new states that comprised the former East Germany, were up 50.7 percent for the first half. In June, sales soared 61.7 percent over 1990 (to 419,300 units), according to industry estimates compiled by *Automotive News*.

But while German demand was exploding, Europe's other major markets — Britain, Italy, France and Spain — were collapsing. The resulting imbalance resulted in German sales accounting for a phenomenal 35 percent of all cars sold in 17 Western European countries in June.

That compares with just over 20 percent in recent years.

Still, many analysts believe that German sales will slump in the second half due to a combination of income tax and fuel tax hikes that take effect this summer.

In addition, some dealers cite a growing glut of unsold used cars — a possible indicator that the powerful demand from the former East Germany, which largely fueled the west German sales boom during the past year, is waning.

Still, Ford of Germany Chairman John Hardiman forecast in an interview that German sales will rise to 3.9 million units this year from 3.27 million in 1990.

General Motors Europe now expects a market of slightly more than 4 million new cars.

Both projections reflect sales of about 400,000 units in the former East Germany.

European sales rose 1.7 percent (to 7,396,500 units) in the first half and jumped 7.6 percent (to 1,173,400 units) in June over the same period in 1990.

But car sales in the United Kingdom slid 24.8 percent, to 801,700, during the first half and dropped 31 percent, to 98,200, in June. French sales were off 16.6 percent (to 990,700 units), in the first half and declined 13.3 percent to 131,200 last month.

Manufacturers with high sales in Germany have benefited this year. Volkswagen Group sales, including the VW, Audi and Seat brands, were up 11.9 percent, to 1,237,300, for the January-June period. VW's first-place market share of 15.2 percent in 1990 climbed to 16.7 percent this year.

General Motors Europe sales, excluding Saab Automobile AB, rose 10.1 percent, to 915,400. Despite capacity limitations, GM's market share rose from 11.4 percent last year to 12.4 percent.

Ford of Europe, the leader in the depressed British market, offset much of that decline with strong sales in Germany. Ford's German sales rose 52 percent in the first half, to 251,900.

Ford of Europe officials now expect the company's German volume to surpass sales in the United Kingdom for the first time. In Britain, Ford was off 28 percent, to 197,400, in the first half, although it still commands about one-quarter of the market.

Despite selling 75,000 fewer cars in Britain during the first half, Ford's overall European sales rose 6.4 percent, and market share climbed from 11.5 percent in 1990 to 12.1 percent.

Second-place Fiat Group declined 11.3 percent, to 973,000, in the first half. Market share, which was 15.1 percent in 1989, fell to 13.2 percent on a steep decline in its home-market penetration.

During the first half, the Japanese quietly increased their overall car-market share to 12.2 percent from 11.2 percent in the first half last year and 11.8 percent for all of 1990.

Japanese producers had difficulty keeping up with the German boom in the first half as market share fell from 15.7 percent last year to 13.6 percent. But in June, the Japanese increased German volume 61 percent, to 62,100, and pushed their share of the overall market to 14.8 percent.

Mexico's May sales increase 14.2%

MEXICO CITY — Mexico's Big Five car and truck makers slowed down from their earlier pace in May but still boosted sales 14.2 percent over last year.

Together, they sold 53,172 Mexican-built vehicles during the month, bringing their year-to-date increase to 32.6 percent. The Big Five also sold 537 imported vehicles in May.

Volkswagen, the Mexican industry's sales leader, had an 18 percent sales gain in May over the year-ago period. Ford, General Motors and Chrysler also had double-digit gains, while Nissan's sales were off slightly.

MEXICAN VEHICLE SALES

	May 1991	May 1990	Jan.-May 1991	Jan.-May 1990
Volkswagen	13,583	11,510	63,469	52,799
Ford	10,247	8,830	49,655	21,654
Nissan	10,776	10,911	49,321	41,861
General Motors	9,564	8,238	45,125	35,252

TOTAL	**53,172**	**46,543**	**250,218**	**188,656**

Source: Mexican Automotive Industry Association

VW remained far ahead of its competitors, with 63,469 sales for the first five months of this year. Ford and Nissan followed, in a virtual tie for second at more than 49,000 units.

Through the first five months, the Big Five sold a combined 250,218 vehicles; smaller truckmakers accounted for an additional 15,000 sales.

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Sales of light vehicles in Canada picked up steam in June.

Total car and truck sales edged up to 140,384, an increase of 4.02 percent over the same month a year-ago.

That helped lift second-quarter sales 2.82 percent over the same quarter in 1990. The increase followed a 13.53 percent drop in the first quarter.

"Early signs of economic recovery are beginning to influence consumer confidence," said Ted C. Goellner, vice president of general sales at Ford of Canada.

The sales gains are coming with incentives still in full flower. But that doesn't always guarantee success. Chrysler cars, for example, aren't doing well, but the company's minivans are exceptionally popular, with record sales of 28,373 for the first half.

Generally, there's a customer resurgence in core car lines, with some vehicles that require discretionary income not doing so well. Mercedes-Benz, Volvo and Jaguar all had double-digit declines for June and the first half. BMW has been an exception to that trend, up for the month and the year.

The first half of 1991 wound up with sales of 696,116 cars and trucks, 4.24 percent behind 1990's midyear total.

Car sales increased for the third month in a row, pulling ahead of the year-ago month by 3.65 percent.

Truck sales rose to 43,431, up 4.88 percent over June 1990.

In June, General Motors reported gains in both car and truck sales for the first time this year. Cars were up 14.17 percent and trucks rose 7.19 percent for a combined increase of 12.03 percent over June 1990.

Chrysler Canada squeaked ahead of last year by 0.83 percent in June. Truck sales soared 18.38 percent above the year-ago month, which countered the 11.80 percent drop in car sales.

Ford reported its best monthly car sales in more than a year with June sales climbing to 16,748, up 1.82 percent over June 1990. Truck sales for the month were down 11.8 percent from last year. Year-to-date Ford's combined car and truck sales were 14.06 percent behind 1990.

Staff Correspondent Alex Law in Toronto contributed to this report.

Luxury tax is more than money

Rolls prospects are so mad, they won't even let the maker pay it

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Rolls-Royce and Jaguar are learning that some people hate the luxury tax so much they won't let someone *else* pay the tax *for* them.

Rolls-Royce Motor Cars Inc. started paying $10,000 to $20,000 per car last month to cover the luxury tax for its customers. Sales improved.

But sales are still only a fraction of last year's average of about 100 cars per month. The offer was supposed to expire a week ago, but Rolls-Royce extended it through Aug. 12.

That could be a bad sign for Jaguar Cars Inc. and other luxury importers.

Jaguar started paying the luxury tax for all its customers June 1, ranging from about $1,000 to $3,000 per car. Jaguar sales jumped from 525 in May to 891 in June, but Jaguar sales were still down 41.8 percent compared to the year-ago month, and first-half sales were down 54 percent.

The Jaguar offer is scheduled to expire Aug. 31.

"People are so incensed about the luxury tax that they don't even want Rolls-Royce paying it for them. They just say, 'No, I don't need a car,' " said dealer James A. Willingham, who has a Rolls-Royce store in Monterey, Calif.

Rolls-Royce doesn't publish sales figures until the end of the year, but the company said sales fell "more than 50 percent" when the tax on cars over $30,000 kicked in on Jan. 1.

Rolls-Royce isn't saying how much sales improved when the tax rebate began June 10, but company spokesman Reg Abbiss said sales were still below last year's monthly average.

Willingham said in his experience, the rebate helped sales go "from 80 percent down to 60 percent down. That's some improvement, but it's still 60 percent down."

The sales decline for the entire U.S. industry was 15 percent for the first half of this year.

Willingham has several luxury franchises, including Jaguar, Ferrari and Rolls-Royce. He is a leader in an effort to get the luxury tax repealed, as chairman of the Dealer Election Action Committee, the political action group for the National Automobile Dealers Association.

ESOP Employee Stock Ownership Plan
THE ULTIMATE INSTRUMENT OF CORPORATE FINANCE

As Owner of a Private Company, Would You Like to Sell Your Stock *Tax Free* and Still Control the Company? That's Right-*Tax Free*-Not Just Deferred, No Tax, Ever. You Can!

AN ESOP WILL ALSO LET YOU:
- Borrow below market. Deduct principal and interest.
- Deduct dividends used to pay loans.
- Get lifetime income. Save personal and corporate income tax. No gains or estate taxes.
- Make acquisitions deductible.
- Transfer company to managers and cash out with huge tax savings.
- Give employees equity while increasing capital and cash flow. Cut benefit costs.

Is your company an ESOP candidate? Check with us.

740 and 940 (1991)	$1,500

Record-setting rebates? Allante ranges from $7,500 to $8,500

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

The Cadillac Allante has the dubious distinction of carrying what may be the highest rebate ever.

Cadillac is offering dealers $7,500 to $8,500 on the 1991 Allante "until further notice."

Oldsmobile, GMC Truck and American Honda Motor Co. Inc. also are offering consumer or dealer incentives.

According to dealers, **Cadillac** is paying $7,500 for the first Allante sold and $8,500 for subsequent sales. The two-seat luxury convertibles are priced at $55,960 and $61,510.

Oldsmobile is continuing its regional incentive programs. For example, it is offering Michigan dealers $1,000 on 1991 Eighty Eights sold through Sept. 25.

Oldsmobile began shipping 1992 Eighty Eights to dealerships last month.

GMC Truck is also in the midst of its cleanup program. The division is offering consumers $500 to $1,500 on 1991 trucks. The rebates also include $1,500 on the 1990 V Jimmy and Suburban and $500 on the 1990 G van. GMC Truck's alternate finance rates, which previously ranged from 7.9 to 10.9 percent, were reduced to 6.9 percent for 24-, 36- and 48-month contracts. The program expires Sept. 25.

Through July 31, **American Honda Motor Co. Inc.** is offering dealers $400 on sales of four-door Honda Civics.

Special Correspondent Darrell Pressley contributed to this report.

XT, XT6 (1991)	$2,000

CHRYSLER

FROM PAGE 1

who requested the carryover allowance by the company's July 10 deadline was "nil or few."

"The incentives are proving more attractive to dealers," Jakobowski said.

Dealers said participation in the incentive programs will result in more revenue and help sell vehicles faster. In addition, dealers said they cannot sell vehicles competitively without the incentives.

NADA maintains that dealers should not have to chose between incentive programs and a carryover allowance but are entitled to both.

"NADA is still calling for a carryover allowance," an NADA spokesman said. "We think dealers should be compensated for an aged inventory in addition to incentives. Incentives are just the cost of doing business today."

General Motors and Ford Motor Co. have notified their dealers that a 5 percent carryover allowance will be paid on 1991 models. But both companies have also told dealers that if market conditions demand it, dealers may be asked to chose between the carryover payment and incentive program participation.

Last week Ford and GM spokesmen said that the companies have not had to ask dealers to chose between the two programs since the carryover allowance was announced in April.

Chrysler dealers have year-in and year-out asked the company to pay a carryover allowance. The issue has been a standing item on the agenda at meetings of Chrysler executives and national dealer councils for several years. But this spring, the subject was not even raised in dealer council sessions, dealers said.

Chrysler said it voluntarily offered the 5 percent stock allowance this year as "a safety net" for dealers because the buildout incentive program was not finalized when dealers' buildout orders were being sought.

Chrysler said it last offered the option of a carryover allowance or incentive participation in July 1978.

The carryover allowance is premised on the assumption that previous-year cars and trucks still in inventory after new-model introduction have less value. It compensates for that reduced value by giving dealers a payment that can be passed along to customers.

If Chrysler dealers opt for the 5 percent stock allowance, they are not eligible to participate in the current round of consumer financing and cash-back incentive programs that expire Sept. 30. They are also ineligible for dealer cash incentives. The consumer rebates range from $300 to $1,500 on 1991 cars and trucks. The dealer rebates, which cover fewer models, range from $100 to $2,000.

Dealers who choose the carryover allowance remain eligible for the Advantage Gold Key lease program, the armed forces allowance, the college graduate allowance and the first-time buyer incentive. The dealerships also continue to participate in factory-paid incentives to sales managers and salespersons.

> Chrysler last offered a carryover allowance option in July 1978.

General Motors this spring said it will pay a 5 percent carryover allowance on 1991 vehicles left in dealers' inventory when the 1992 model year begins. It will pay dealers 5 percent of sticker price for each vehicle delivered to customers through March 31, 1992.

In addition, dealers will receive a lump-sum payment of 5 percent for all eligible 1991 vehicles in inventory on April 1, 1992.

At GM, the carryover allowance dates back to the mid-1950s. In recent years, because of high inventories, GM has given dealers the option of participating in model closeout retail promotions. Those programs were offered instead of or in combination with the carryover allowance.

Ford in April announced a 5 percent carryover allowance for most 1991 vehicles still in dealers' inventories after 1992 models are introduced.

The program is effective from the official 1992 model introduction through March 31, 1992.

Penske subsidiary OKs Mercedes-Benz truck deal

By Joseph Bohn
TRUCK EDITOR

Diesel Technology Corp. of Grand Rapids, Mich., signed a development contract with Mercedes-Benz AG of Stuttgart, Germany, for the design and manufacture of electronic fuel injection systems for Mercedes-Benz medium and/or heavy trucks.

Diesel Technology already supplies Mercedes-Benz's U.S. heavy-truck manufacturing subsidiary, Freightliner Corp. in Portland, Ore., through its affiliation with Detroit Diesel Corp. Diesel Technology and Detroit Diesel are both owned by Penske Transportation Inc.

Derek Kaufman, Detroit Diesel president, said the contract prohibited him from discussing which engines and intended truck models were involved.

This summer, Freightliner began full-scale U.S. production of a new line of medium-duty trucks for the first time. These vehicles offer both a Brazilian-sourced Mercedes-Benz engine, as well as a U.S.-sourced Cummins engine.

The new contract could be aimed at one or both engines.

Helmut Werner, deputy chairman of Mercedes-Benz AG, said the new agreement is for an exchange of technical knowledge and the development of electronic fuel injection systems to enable Mercedes to meet stricter U.S. diesel pollution standards in 1994 and 1998 with a minimal fuel penalty.

Mercedes-Benz and Detroit Diesel formed a joint project team to promote fuel system design and development, Detroit Diesel production planning, procurement of parts and establishment of a service support network.

Production of the new fuel injection is scheduled to start by the mid-1990s.

Earlier discussions between the two companies gave rise to rumors that Mercedes might be acquiring Penske's Detroit Diesel Corp.

GM closes 6 plants as sales falter

By Bob DeMayer
SPECIAL CORRESPONDENT

Because of poor sales, General Motors will shut three car and two truck plants for the next two weeks and one minivan plant for the next three weeks.

The car plants are: Arlington, Texas; Fairfax, Kan.; and Willow Run, Mich. The truck plants are Shreveport, La., and Pontiac, Mich. (East), and the minivan plant is Tarrytown, N.Y.

The four-week-old strike continues at GM's Baltimore minivan plant, which is the sole source of Chevrolet Astro and GMC Safari.

U.S. car production surpassed three million units for the year last week. In 1990, the three-million mark was reached three weeks earlier. U.S. car and truck production rose last week due, in part, to Ford Motor Co. plants resuming output after a two-week shutdown for vacations.

Auto manufacturers scheduled 95,070 cars last week, 11.30 percent above the preceding week and 5.23 percent above last year.

Year-to-date, U.S. car production is 3,001,511, down 12.63 percent from 1990.

Truckmakers planned to build 73,021 units last week, up a whopping 80.49 percent from the prior week because of Ford's return to work but down 7.59 percent from the 1990 week.

So far this year, 1,811,080 trucks have been assembled, 19.65 percent behind 1990.

Automakers split last week's estimated production as follows: General Motors, 40.79 percent; Ford, 30.03 percent; Honda of America Manufacturing Inc., 9.79 percent; Toyota Motor Manufacturing U.S.A. Inc., 4.47 percent; New United Motor Manufacturing Inc., 4.42 percent; Mazda Motor Manufacturing (USA) Corp., 3.45 percent; Diamond-Star Motors Corp., 3.05 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.80 percent; and Subaru-Isuzu Automotive Inc., 1.20 percent.

All Chrysler Corp. plants were closed for vacation last week.

GM scheduled one shift of overtime last Saturday at its Detroit truck plant and Flint, Mich., truck assembly line (No. 2). Flint builds the GMC Suburban.

CANADA: Canadian car production was estimated at 17,871 last week, up 13.32 percent from the prior week, but down 11.92 percent from the year-ago week.

Truck production last week was estimated at 5,926, down 58.63 percent from the prior week and down 15.66 percent from the year-ago week.

Year-to-date, truck production in Canada is down 8.36 percent. Ford scheduled one shift of daily overtime this week at its St. Thomas, Ontario, car plant.

Hall of Fame to induct 6, award others

MIDLAND, Mich. — Six industry leaders will be inducted into the Automotive Hall of Fame at an awards banquet Sept. 30.

The banquet also will honor John O. Grettenberger, Cadillac general manager, as Automotive Industry Leader of the Year.

Stephen R. Plumley, vice president of technology for the Plumley Cos. in Paris, Tenn., will receive the award for young leadership and excellence. Keith E. Crain, publisher of *Automotive News*, will serve as master of ceremonies at the banquet that will be held at the Westin Hotel in Detroit.

The six industry leaders to be honored are:

- Sir Frederick Henry Royce, who, together with Charles S. Rolls, built the first "Silver Ghost" in 1905.
- J. Harwood Cochrane, who started Overnite Transportation Co. in 1935.
- Harold Dieckmann Draper Sr., who turned Draper Chevrolet into one of the first megadealerships.
- Dr. W. Edwards Deming, whose achievements in productivity and quality control and distinguished service to Ford Motor Co. and General Motors brought him recognition in the United States and Japan.
- Zora Arkus-Duntov, also know as "Mr. Corvette," for transforming the Corvette from a rather mundane vehicle into a true sports car.
- Rene C. McPherson, who transformed the Toledo, Ohio, based Dana Corp. from a bureaucratic money loser into a lean profit machine.

Tardy NHTSA to expose failure of 'passive' belts

JACK KEEBLER and LIZ PINTO
Staff Reporters

Last September, a Brunswick, Maine, policeman died when he was thrown from his Caprice cruiser during a high-speed chase. The automatic belt system, mounted on a door that swung open in the crash, failed him.

Maine State Police who investigated the accident subsequently retrofitted all 12[illegible] of their 1990 Caprice police cruisers with manual three-point belts attached to the B-pillars — the traditional restraint system that had been outlawed by the federal government in the name of "passive" safety.

The police suspected what an increasing body of evidence is showing: that so-called "passive" belts are inferior to properly used manual belts. That evidence also suggests that all automatic seat belts do not provide equal protection.

Later this year, the National Highway Traffic Safety Administration is expected to release a study started in early 1990 that reveals the inferior protection provided by some passive belt systems permitted under the 1984 Federal Motor Vehicle Safety Standard 208. That rule mandates either air bags or — in a compromise with automakers who opposed air bags — automatic belt systems.

MORE ON SAFETY BELTS
Belts cost less ➤ 32
Curry's st[illegible] ➤ 33

The NHTSA study will focus on motorized shoulder belt systems that require users to fasten lap belts manually, say government sources. NHTSA also is investigating improper usage, non-usage and ejections relating to the three-point, door-mounted system.

NHTSA numbers suggest that as many as 63,000 lives could have been saved if air bags had been the only passive restraint mandated for both front-seat positions in 1984 and if occupants had used manual belts with the bags.

But the study may be too late to save any lives.

First, consumers have embraced air bags as the passive restraint of choice, and automakers are scrambling to meet the demand. Resistance to air bags has diminished because suppliers have slashed air bag prices.

Second, legislators are already

GM's passive belt forces occupants to slide awkwardly under the extended webbing — when they use it at all.

FORD

Federal regulations affect new models as much as battles with any competitor

Fourth in a series of articles exploring product plans of the U.S. Big 3 and Asian and European automakers.

KATHY JACKSON
Staff Reporter

General Motors, Chrysler Corp. and Japanese automakers won't be the only ones challenging Ford Motor Co. this decade.

In Ford's view, Washington is as key a nemesis as they come as the automaker attempts to meet new government standards, win back market share and report black ink again.

At its annual meeting in May, Chairman Harold Poling said the 1990 Clean Air Act, new safety rules and [illegible]oposals to increase fuel economy will stretch the company's human and financial resources to the limit. It will cost Ford $2.6 billion, or $600 per vehicle, just to comply with the new clean air rules, Poling said.

But he insists that won't stop Ford's drive to keep fresh products on the market.

POPULAR MECHANICS/JIM DUNNE

The Mercury Villager minivan is similar in size to Chrysler Corp.'s minivans. A Taurus-style nose disguises this prototype.

"Contrary to what you may have heard or read, we have not made any significant cutbacks in our product plans."

Plans call for most Ford [illegible]rs and trucks to get facelifts or redesigns in the next five years, and some platforms will be replaced. One new nameplate is on the horizon: the 1993 Mercury Villager minivan.

And many of those vehicles will be powered by new engines, primarily Ford's four-cylinder Zeta engines, expected to arrive in at[illegible]t 1994, and an expanding modular engine program.

Poling said worldwide capital spending between 1991 and 1995 would be up from the $26 billion spent the previous five-year period. Company insiders peg the figure at about $30 billion.

Chrysler goes dual in cities

MARY CONNELLY
Staff Reporter

Chrysler Corp. has thrown out a fundamental tenet of Big 3 dealer strategy by dualing Chrysler-Plymouth and Jeep-Eagle franchises in single showrooms in seven metropolitan areas.

The ban on such duals is crumbling under pressure from dealers worried that the corporation lacks the financial and product wherewithal to carry 5,000 dealers in three networks through the 1990s.

In the past year, Chrysler has permitted 77 Chrysler-Plymouth/Jeep-Eagle duals, said T.R. "Ted" Cunningham, Chrysler's executive vice president of sales and marketing. Eleven of those 77 have been in seven metropolitan markets where traditionally the company would have required separate dealerships.

The remainder have been in secondary markets where corporate dualing is a long-standing practice.

Company officials insist there is no plan to reduce the dealer count substantially or to eliminate a brand.

But some Chrysler Corp. dealers suspect that the move could lead to a repositioning in which Ply-

U.S. grows impatient with Japanese parts-buying levels

MARY ANN MASKERY
Staff Reporter

TOKYO — The United States has told Japan that it has run out of patience with Japan's pledges to purchase more U.S. auto parts.

After three days of talks on parts trade last week, J. Michael Farren, U.S. undersecretary of commerce for int[illegible]national trade, said he told the Japanese side, "We are not satisfied with the progress to date on the purchase of parts from traditional American auto suppliers."

Farren: game one-sided ➤ 34

In earlier meetings, Japanese automakers had urged patience because of their four-year product cycles. But Farren said he told them, "We were patient for four years; we don't have more patience to offer."

The $10.5 billion U.S. deficit in auto parts accounts for about one-fourth of its total trade deficit with Japan.

Japanese negotiators repeated their stand that they are making progress in purchasing U.S. parts and plan to buy more.

Despite the stern language, the latest MOSS (market-oriented sector-selected) talks on auto trade

Sales recovery treads rocky road

JIM HENRY
Staff Reporter

Sales continued to improve over the calamitous totals of early this year, but mid-July remained weak in comparison with year-ago figures.

The industry sold 372,567 cars and light trucks, down 8.2 percent from a weak 1990 period. July 11-20 had nine selling days each year.

"We are on a recovery path, but recoveries are bumpy, and recoveries never go straight up," said Scott Merlis, auto analyst for Morgan Stanley & Co. in New York. Merlis said fleet sales usually decline from the second to the third quarter, which helps account for the fact that sales haven't improved any more than they have.

10-day sales table ➤ 35

As in early July, Toyota Motor Sales U.S.A Inc. posted the best year-ago comparison of the major car companies, with car and light-truck sales up 12.6 percent.

Toyota brand car sales rose 16.6 percent. Sales of the Tercel, an early blooming 1992 model, were 45.3 percent above the year-ago period, Toyota reported. Lexus car sales were up 16.5 percent, and Toyota truck sales grew 3.2 percent.

Each of the U.S. Big 3 posted lower sales, ranging from Ford Motor Co.'s loss of 16.5 percent to General Motors' decline of 4.3 percent.

Last year, sales for the Big 3 were down 13 to 18 percent in mid-July, which further blackens this year's picture.

Chrysler Corp. sales declined 9.3 percent. *Automotive News* estimates 10-day sales for Chrysler and for most imports.

GM's car sales were about even with last year, down 0.4 percent or 368 units.

Among the GM divisions, Buick continued its year-to-date improvement, with 10-day sales up 1.0 percent.

Volume leader Chevrolet was down 5.3 percent at 73,159 cars and trucks, but it length ned its lead over Ford Division, which sold 65,466.

GM light-truck sales were down 12.3 percent in mid-July.

Sales at the Japanese-based companies varied.

American Honda Motor Co. Inc. fell 13.8 percent, despite a 4.0 percent rise in Acura sales.

Nissan Motor Corp. in U.S.A. was up 3.4 percent, as its Infiniti luxury division more than doubled sales over a year ago. Sales of U.S.-built Sentras and pickup trucks also rose.

Except for Isuzu Motors of America Inc., whose sales jumped 22.2 percent, combined import-domestic sales fell for the other Japanese companies with U.S. production facilities. Sales were off 14.8 percent at Subaru of America, which had been up 7.9 percent through the first half of the year.

Car drought is standard for Skoda Canada

JEREMY SINEK
Special Correspondent

TORONTO — Skoda's distributor in Canada is still in business, even though it hasn't had a new car to sell in more than two years.

Since the Czechoslovakian automaker delivered the last of its dated, rear-engine 135 GLi models to Canada in April 1989, Canadian-owned Skocar Inc. has waited in vain for its replacement, the front-wheel-drive Favorit. And Skocar may never receive another car from the Skoda factory.

AUTOMOTIVE NEWS/JOE WILSSENS

Nick Janakovic has stayed a Skoda dealer even though he hasn't had a car to sell in two years.

Production of the Bertone-styled Favorit began in Czechoslovakia in 1988. Since then, the Iron Curtain has been lifted and Volkswagen AG agreed last fall to take control of what had been Eastern Europe's largest automaker.

Now lines of communication are in tatters, and North American exports are on hold.

"All the top people that we were used to dealing with, who were staunch Communists, left very quickly," says Christopher Rines, Skocar's operations manager.

The phased buyout of Skoda by VW will clearly change things, though nobody seems to know how. VW's initial 31 percent stake is scheduled to rise to 70 percent by 1995.

"We had hoped that with the VW purchase, decisions would be made — whether they were decisions we wanted to hear or not — and we would have some kind of a clear direction as to where we were going," says Rines.

"But we have had absolutely no indication of Skoda's intentions for this market. It has made our position extremely uncomfortable."

Clive Warrilow, president of Volkswagen Canada Inc., confirms that Volkswagen AG is a long way from making any decisions about Skoda in Canada: "They have so much to do internally and in Europe that they're not even thinking about North America yet."

But Warrilow is sure VW Canada Inc. will be involved in any decision. And if that happens, Skocar's future becomes a even more of a question.

"I can only surmise that a company as big and respected as VW would reach an amicable settlement" with Skocar if Skoda decides to distribute through VW Canada, says Rines. "If they decide to pull out of the market, there is a responsibility to existing customers that must be met (especially) if they had any vision of selling the car here in the future."

Skocar executives plan to visit Czechoslovakia in August to try to get some answers.

Meanwhile, the tiny importer based just outside Toronto has sublet half its building and slashed its payroll from 13 people to four.

"The reason we're still here is to maintain a presence in the market and provide parts and service and technical support to

Study stalls; CAFE delay to '92 likely

DIANA T. KURYLKO
Staff Reporter

WASHINGTON — Debate on raising fuel economy standards won't resume until at least September, and lobbyists are now betting that any increase won't be approved until mid-1992.

The issue has been put off in part because of delays in a National Academy of Sciences report on the economic and technical feasibility of higher standards. The results were expected by June 30, but the project got off to a slow start and the report isn't scheduled for release until this fall.

The auto industry is banking on the research to prove what it has been arguing on Capitol Hill: A big increase in corporate average fuel economy rules is not technologically or economically feasible.

Two bills are ready for debate by the full Senate but have been delayed by politicking. Senate Majority Leader George Mitchell, D-Maine, has failed to strike a deal with the bills' sponsors and hasn't scheduled either for a floor vote. Congress will recess from Aug. 5 to Sept. 6.

One of those bills, sponsored by Sen. J. Bennett Johnston, D-La., was amended two weeks ago to include specific CAFE increases. The original bill, which was supported by the auto industry, would have authorized the Department of

Yugoslavia strife perils Yugo

RICHARD BRUNER
Staff Correspondent

BUDAPEST, Hungary — The civil strife that has crippled daily routine in much of Yugoslavia has brought Zavodi Crvena Zastava, the big machinery and weapons conglomerate that produces Yugo cars, to the brink of collapse, senior officials warned last week.

The turmoil, sparked by the push of two states to secede from the Yugoslav federation, has choked off operating credit and obstructed the flow of components from domestic and foreign suppliers, Oliver Kankaras, a company director, said in a telephone interview from Belgrade.

Kankaras, who heads Zastava-Impex, the company's import-export arm, said his company has met with officials of the federal Yugoslav government, prominent banks and its suppliers in an effort to keep the company from collapsing.

Because of mounting parts shortages, production has fallen from a normal rate of 600 to 700 vehicles a day to fewer than 400 a day, he said. The company produced 189,000 vehicles last year.

At the same time, exports and domestic sales have fallen 50 percent since the civil turmoil began, Kankaras said.

William E. Prior, chief operating officer of Yugo America Inc., said last week the turmoil had not yet affected the U.S. subsidiary, where sales in June were 228.

The turmoil has choked off operating credit and obstructed the flow of components from domestic and foreign suppliers.

Big 3 face $4 billion loss for '91 after $3.2 billion 1st half fiasco

EDWARD LAPHAM,
KATHY JACKSON
and JOSEPH BOHN
Automotive News Staff

The Big 3 continue to hurtle toward a potential combined loss of $4 billion this year, following a $1.3 billion net loss in the second quarter that brought the first-half total loss to $3.2 billion.

The record annual loss for domestic automakers, including American Motors, was 1980 when the four makers posted a combined net loss of $4.2 billion. Last year, the Big 3 lost a combined $1.1 billion.

Combined Big 3 sales declined 10.3 percent in the quarter to $59 billion. Combined first-half sales of $111.1 billion were off 10 percent from the first six months last year.

Worldwide factory sales of Big 3 vehicles were off 10.3 percent to 3,950,000 in the period and down 11.3 percent to 7,238,000 in the first half.

There were few surprises in the April to June results. Retail incentives remained nearly $1,000 per vehicle. Forecasts for the coming months remained cautious, although cost-cutting programs and an improving economy should gradually improve results.

"This is still the aftershock of the energy-war-recession thing," said auto analyst Scott Merlis of Morgan Stanley in New York. "But the first quarter was the trough for financial margins and operating results."

Merlis projects annual losses of $2.4 billion for General Motors, $1.2 billion for Ford Motor Co. and $506 million for Chrysler Corp.

He said the automakers are positioned for a good 1992 model launch, but have extremely conservative third-quarter production schedules.

"There could be some spot shortages of certain models," he said. "That's the irony of this year."

BIG 3 EARNINGS

SOURCE: Corporate reports

AUTOMOTIVE NEWS/JOE WILSSENS

Ford's David McCammon said its products are more blue collar and suffer more in recessions.

General Motors

There were no words of booming optimism from GM last week as the automaker reported a second-quarter net loss of $784.5 million, which brought its first-half net loss to a record $1.2 billion. The first-half loss would have been nearly $1 billion greater but for the first quarter sale of the General Motors Building in New York and an accounting change. Last year, GM earned $1.6 billion in the first half.

GM Chairman Robert C. Stempel blamed the dismal report on obvious causes: "adverse impact of the recession in the United States" and weak industry vehicle sales.

GM second-quarter sales were off 7.7 percent to $31.3 billion. First-half sales declined 5.5 percent to $60.5 billion.

But auto analyst Ronald A. Glantz of Dean Witter in San Francisco said GM's financial results reflected more than just an ailing economy. "There was a complete collapse in pricing," he said.

Glantz said GM's net result in the second quarter was $1.5 billion worse than in the fourth quarter of 1989, when GM earned $700 million on the same sales volume.

Glantz said there were no

Europe considers plan to split Japanese limits

ED WENDT
Staff Correspondent

LONDON — The European Community last week called on its 12 member nations to accept a deal that would set separate limits on Japanese imports and transplant production through the end of the century.

The community is under mounting pressure to forge an auto-trade agreement with Japan that balances widely divergent interests.

According to sources, Gian Luigi Giola, a senior member of the European Commission, the community's executive arm, informed ministers last week that Japan is prepared to accept a proposal that would limit Japanese car imports to last year's level of 1.2 million to 1.3 million units per year during a transition period from 1993 to the end of 1999.

Additionally, a "gentleman's agreement" would cap Japan's transplant production in Europe at 1.2 million vehicles a year, up from 260,000 last year.

The combined total of some 2.5 million vehicles a year would give Japanese producers a combined share of 17 to 18 percent of an expected total market of 14 million units by 1998.

Although identical in impact to the EC's original proposal — which ceded Japanese producers a 17 to 18 percent share whether they filled it with imports or transplant production — the new plan appears to mollify British concerns that the importance of European production by the Japanese be specifically set out.

Nissan Motor Co. Ltd. currently produces about 120,000 cars a year at its British plant, and Toyota Motor Corp., Honda Motor Co. Ltd. and Mazda Motor Corp. are building plants in the United Kingdom with a projected combined capacity of 700,000 units a year by 1998.

But one analyst, who has written several studies on the issue, said the EC proposal vastly underestimates Japan's production capacity in Europe.

"The commission's figures are a minefield of inaccuracies," said Ian Robertson, senior editor for the London-based Economist Intelligence Unit.

According to Robertson, Japanese producers will have the capacity to build 1.83 million cars and sport-utilities a year in Europe by 1999, with Toyota and Nissan accounting for nearly half. Whether the Japanese will be willing to accept 600,000 units of excess capacity to comply with the accord remains to be seen, he suggested.

Like the original proposal, the commission's latest plan was judiciously leaked.

The commission has not openly announced its trade stance in a bid to both minimize differences between the 12 community members and to avoid the appearance of openly endorsing import quotas that may be questionable under the rules of the General Agreement on Tariffs and Trade.

Nonetheless, the commission's plan has run a gauntlet of criticism since it was first leaked in late April. France and Italy, which currently limit Japanese penetration to 3 percent and 1 percent of their markets, respectively, have criticized the plan for being too soft on Japan,

GM strike ends 1 week before downtime

LIZ PINTO
Staff Reporter

"We got everything we asked for," said Sonny Biedrzycki, a spokesman for UAW Local 239, as workers returned to their jobs last Monday at General Motors' minivan plant in Baltimore.

The plant had been closed for 26 days. A settlement was ratified July 20 by 99.4 percent of the 3,200 striking workers.

"Our membership is really happy," Biedrzycki added.

The walkout began June 24 over job conditions the union called unsafe. The plant is the sole producer of the Chevrolet Astro/GMC Safari. The strike resulted in a production loss of about 12,000 units.

The union said the layoff of about 400 workers in February caused workers to be injured as they scrambled to maintain production levels. Before the strike, the union started a grievance procedure, requesting that 64 workers be added to the line to alleviate the problem, but GM agreed to hire only 18 extra workers.

Under the strike settlement, 46 more workers will be added gradually, beginning immediately.

GM spokeswoman Kari Hulsey said the company "was very pleased with the settlement. We believe it will allow us to make productivity gains at the plant and to become more competitive."

Hulsey would not say what issues GM had come out ahead on, but said, "GM management came up better after strike negotiations than had we settled earlier."

The strike nearly depleted the inventory of Astros, which have the "lowest day's supply of any Chevrolet vehicle," according to Chevrolet spokesman David Hudgens. He said GM did not feel pressured to end the strike, even though some material the plant used for 1991 models will be obsolete for 1992 models made after Sept. 1 because of federal laws.

Thomas Pfingst, Chevrolet assistant fleet and RV manager, said that any prolongation of the strike would have resulted in order cancellations.

The plant worked 10-hour shifts through Saturday last week to recoup as much of the lost production as possible. *Automotive News* estimates last week's production at 4,638 units, compared to straight-time output of 3,785.

A scheduled two-week shutdown begins today as the plant changes to production of 1992 models.

Hulsey said that with the scheduled overtime last week, Chevrolet hopes to keep leftover 1991 model material to a minimum.

Van converters and suppliers who sell just to the plant had begun to feel the strike's effect.

"We closed down production the minute we heard the plant was out on strike," said Steve Jones, general manager of Monarch Manufacturing Inc. of Belcamp, Md., a dedicated supplier of instrument panels to the plant. "We laid off 80 of our 90 employees, but the day they went back to work, we went back to work."

William Snook, president of Coachmen Vans in Elkhart, Ind., said "hallelujah," when he heard the strike was over. "Had this strike continued and the converters lost all the '91 Astros and Safaris they had coming, we would have lost thousands of sales that would never have been made up."

Besides concessions on adding workers, vacation and maintenance issues also were resolved. According to the union, GM agreed to stop using contractors in place of skilled union trade workers and to reinstate all vacation time.

The company had told about 160 workers that they would be paid for their upcoming vacation time rather than being allowed the time off, according to Biedrzycki. The workers are now being scheduled for time off.

But despite the union victory, Rodney Trump, president of Local 239, hinted at an October strike.

The union said GM plans to increase the line speed Oct. 7 from 42 to 48 vans per hour.

Hulsey said GM is considering an increase in the line speed because of demand for minivans.

If the line speed is increased, Trump said, "GM will either add more people or we will be in the same place again. We think we can work this out with them. If not, they know where we're going."

Truck Editor Joseph Bohn and The Associated Press contributed to this report.

Toyota announces plans to build new assembly plant in Australia

MARY ANN MASKERY
Staff Reporter

TOKYO — Toyota Motor Corp., which has been cutting staff and production in Australia because of a declining market, has now decided to go ahead with plans to build a new plant, with hopes of eventual export.

Although sales have been rapidly declining in Australia, Toyota decided to virtually phase out two aging plants that built 71,500 units last year and replace them with capacity for 100,000. The new plant, to be built in Melbourne, will cost an estimated $350 million and will begin production in 1994. It will be the first new plant built in Australia in over 25 years.

"It was either compete or quit," said a Toyota spokesman.

In the last year, Toyota has laid off 900 workers from a work force of 6,000 at its existing plant through a "voluntary retirement" arrangement. Other companies have made similar cutbacks because of the deteriorating conditions of the market, with sales dropping approximately 20 percent in the first half of the year.

In March, the Australian government announced it would move to reduce tariffs on imported cars. That decision, Toyota said, meant additional pressure on companies producing in Australia to increase efficien

The new facility will aim to match the efficiency of Toyota's U.S. plants, which produce a car in less than 20 hours, compared to the 30 hours it now takes in the Australian plants. Toyota said it had not exported from Australia before because high costs and inefficiency made the products uncompetitive in the world. It will not decide on any export plan until it has first established the efficiency of the new facility.

The new plant will have no direct effect on General Motors, which has a joint venture holding company with Toyota in Australia. Currently, the Toyota plants produce the Corolla and Camry for the Toyota nameplate and the Nova and Apollo for the GM badge, while General Motors produces the Commodore/Lexcen for both companies.

Toyota will phase out most production at one of its plants. The other, an old GM facility, will go back to the holding company, which will determine future use.

SERVICE MANAGEMENT

Ford tests refrigerant in fleets, body shops for dealers

AL ROTHENBERG
Special Correspondent

Preparing for widespread use of environmentally safe air conditioning refrigerants, Ford Motor Co. will test the use and recovery of R-134a in some fleet vehicles next year.

And this fall, Ford is heading into what it regards as virtually unchartered seas with a new body shop program. A pilot test with a dozen dealers is scheduled to begin in September.

Both fit in with Ford's efforts to improve customer service within the industry. One of its biggest pushes in that direction came earlier this year with the release of the Service Bay Diagnostic System, said Joseph A. Ogden, manager of Rotunda Equipment for the Parts and Service Division.

"It isn't just the dealer service," Ogden said. "It's everybody's fault. It begins with the product that's built. It follows through with the type of service departments that are set up and how well they are equipped and trained."

JOE OSTER

Ford's system has racked up several successes since its introduction, Joseph Odgen says.

Ogden said fleet vehicles in Dallas and Houston will be used for the R-134a test next March.

Ford expects to begin using the refrigerant on some regular production vehicles for the 1993 model year, a spokesman said. General Motors also plans to begin phasing in R-134a with the 1993 model year, while Mercedes-Benz is using it on 1992-model S class.

Like all manufacturers, Ford is involved in reclaiming currently used R-12 refrigerant from automotive air conditioners to prevent it from destroying the protective ozone layer above the earth.

The company also hopes to reclaim R-134a because it is far more expensive than R-12, but doing so will require different equipment.

"By September, we will be offering the (reclamation) equipment to Lincoln-Mercury dealers and the following March to all Ford dealers," Ogden said.

The body shop traditionally is the province of the dealer, he said. "A dealer does not have to have a body shop. He elects to do it and it is not an operation where we must guide him. We have opted to do it because Ford sees it as an area for increased dealer profitability and customer satisfaction.

"We will be testing a complete program to assist the dealer to maximize his performance from planographing (shop layout) to equipment types, manpower and financial considerations," he said.

Ford officials are encouraged by early dealer experience and comments with the computerized service diagnostic system.

"Since the first of the year, we have diagnosed driveability problems of some 36,000 cars," Ogden said. "We have no reportable return of a serviced vehicle for a second diagnosis."

The system, a development of Hewlett-Packard Corp., has been ordered by more than 2,300 Ford and L-M dealership service departments. Hewlett-Packard is signed to sell the system solely to the automaker for a specified period of time. Production is running about 150 a month.

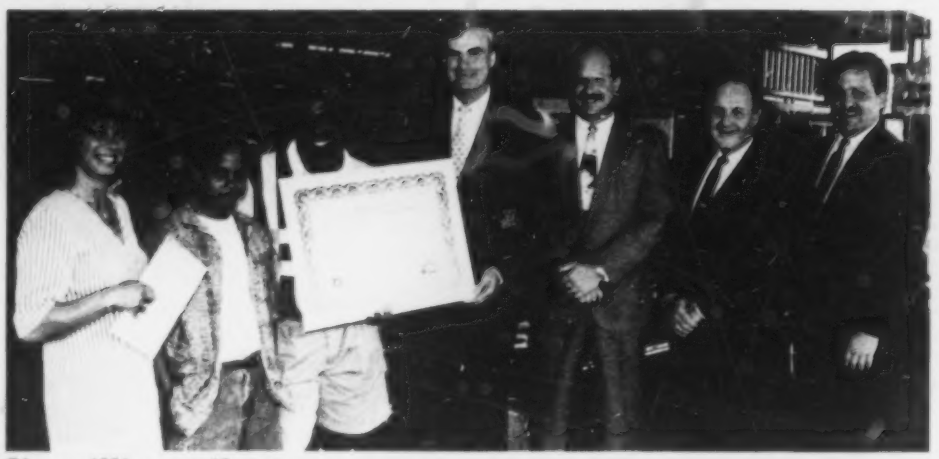
GM dealers have similar capabilities with T-series computerized diagnostic systems. Chrysler Corp. has delayed the rollout of its system to make software changes.

The Ford system can cost a dealer as much as $35,000 and Ogden says a dealer investment of that size is quite significant, especially in the current recession.

Ford has a program to rent the system to dealers, a first-ever service equipment rental arrangement by the company to dealers.

A frequent puzzler for both owner and service technician is the inability to reproduce a problem that occurs on the road.

The Service Bay Diagnostic System includes a portable vehicle analyzer that slides out of the service bay system and rides in the car with the owner to record all vehicle riding sequences. The portable is returned to its mother system where it is downloaded and unfolds its problems.



Six million milestone

Donald Bennett Sr., third from left, of Warren, Mich., was the 6 millionth customer to buy a Chrysler Service Contract in the program's 11-year history. Pictured are, from left: Patricia Bennett; Donald Bennett; Bennett Sr.; Jim Lowry, manager of Chrysler Service Contracts; Shaw Lynes of Champion Chrysler-Plymouth in Mount Clemens, Mich.; and Ron Boyd and Kirk Kammer of Chrysler Service Contract.

Service business declines

DETROIT — At a time when new-car dealers are relying even more on service and parts business to stay afloat, that business declined in June compared to a year earlier.

Parts and repair business was just 94.9 percent of the June 1990 total, as measured by the Automotive News Service Index. June was the second consecutive month that shop business fell short of the comparable month a year ago.

In June, the largest drops were reported in repair orders written and sales of all parts and accessories. The only increase noted was in total labor sales.

For the first half of this year, parts and service business was 99.5 percent of the total in the first half of 1990.

The biggest decline in the first half was in gross profit on all parts and labor. Shop parts sales was the only category of the five tracked that showed an increase.

Several of the survey respondents blamed the recession for the decline in business. Other reasons included:

- Unusually mild weather in June, resulting in lower-than-average wholesale and four-wheel drive repair sales.
- "In these tougher economic times, we are not doing a good job competing with the cheaper non-factory repair shops," one dealer said.

SERVICE INDEX
94.9*

	June, '91 vs. June, '90	Jan.-June, '91 vs. Jan.-June, '90
Gross Profit on All Labor and P&A Sales	– 4.5%	– 9.5%
Repair Orders Written	– 8.6%	– 0.9%
Total Labor Sales (Customer & Warranty)	+ 1.1%	+ 0.9%
Shop Parts Sales (Customer & Warranty)	– 4.0%	+ 2.8%
Sales of All P&A	– 7.4%	– 0.8%

* Survey by Automotive News shows that dealers' service and parts business in June 1991 was 94.9 percent of business in June 1990. Service business in the first six months of 1991 was 99.5 percent of business in the corresponding period in 1990.

Some dealerships reported an increase in service business for the month. Among their reasons:

- Increase in the labor rate.
- More customers repairing instead of trading in their cars.
- A month of record-setting high temperatures, increasing business for air conditioning and cooling system repairs.

Figures used in the Automotive News Service Index are compiled from monthly reports on service and parts business from a cross section of the nation's new-car dealers.

BRIEFS

GM recalls sport-utilities

DETROIT — General Motors is recalling about 112,000 1991 model sport-utilities due to a problem with a seal in the fuel system.

The recall covers four-door Chevrolet Blazer, GMC Jimmy and Oldsmobile Bravada vehicles. GM said the fuel tank sender seal may be out of position, which in the event of a rollover could allow fuel to spill.

Camaro, Firebird, Fiero recalled

DETROIT — About 196,000 1982-86 passenger cars are being recalled by General Motors to repair the parking brake.

The recall covers 1982-86 Chevrolet Camaros and Pontiac Firebirds and 1984-86 Pontiac Fieros equipped with manual transmissions and rear disc brakes. The vehicles may contain a faulty parking brake adjuster. The condition could cause a gradual loss of parking brake effectiveness.

GM first notified owners of the condition in April and is now initiating the recall after stocking repair parts.

Ford recalls passenger cars

DEARBORN, Mich. — Ford Motor Co. is recalling about 11,800 cars to repair problems with automatic transmissions and transmission oil coolers.

One recall covers 6,425 1991-model Ford Crown Victoria, Thunderbird and Mustang and Mercury Grand Marquis and Cougar. A cam on the parking rod assembly of the automatic transmission on about 1,000 of the vehicles may be below the minimum hardness. These vehicles may be difficult to shift into or out of park, and may not properly engage in park.

Ford also is recalling about 5,400 1990-model Probe GTs with automatic transmissions to inspect the transmission oil cooler. Radiator coolant may leak into the transmission cooler, which could lead to failure of the transmission. Dealers will reposition a clamp on the oil cooler. Ford also estimates that 2 percent of the vehicles will require radiator replacements and 1 percent will need new radiators and transmissions.

DuPont updates refinishing book

WILMINGTON, Del. — DuPont has published an updated version of its Automotive Refinishing Handbook.

The 134-page illustrated book includes sections covering paint and body shop layout, safety and health practices, refinishing systems and techniques, surface preparation, and application of undercoats and topcoats. A section is devoted to troubleshooting painting problems.

The book sells for $14.55, with one dollar from each sale donated to the Educational Development Fund established by DuPont and the Vocational Industrial Clubs of America. For ordering information, call 1-800-533-1313.

'92 Cadillacs get smaller fuses

ROGER ROWAND
Staff Reporter

DETROIT — Aside from new looks, Cadillac's 1992 Seville and Eldorado are getting new fuses.

The blade-type mini fuses, manufactured by Littelfuse Inc. of Des Plaines, Ill., are about two-thirds the size of the current auto fuses.

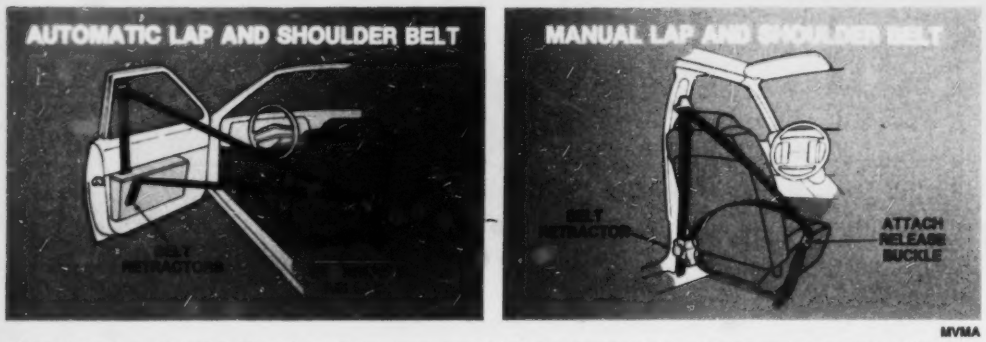
The new fuses allow engineers such flexibility as putting each taillight on a separate electrical circuit or isolating items such as clocks, computers, fuel injection and interior lights.

The new Eldorado and Seville each use about 50 mini fuses in fuse blocks in the engine compartment and trunk, up from just 26 standard fuses in the last model year.

GM has notified Cadillac dealership service managers that the little fuses will replace larger fuses on future models and that managers should order the new ones for stock.

Blade-type fuses were introduced in 1976 to substantially replace the glass cartridge fuse that had been used almost universally in this country for decades.

The mini fuses, 52 per car, have been installed in Saturn cars since production started last year.



MVMA

GM-style passive seat belt (left) anchors to the door; manual belts used with air bags (right) anchor to the B-pillar.

20 YEARS OF AIR BAG HAGGLING

The history of the 20-year movement to have mandatory dual air bags in light vehicles is checkered with political and social infighting. Here are the highlights:

■ **1970**

NHTSA issues air bag rule for passenger cars to become effective in 1974. Auto industry fights it. Standard never becomes law, being rejected in 1971 by Nixon administration after messy court battle.

■ **1977**

Air bag standard is reissued.

■ **1981**

Air bag standard is again revoked, this time under Reagan administration after industry attack.

■ **1984**

The Federal Motor Vehicle Safety Standard 208 passive restraint rule is finally pushed through after the Supreme Court rules that the rule could not be revoked. NHTSA agrees to a choice of restraints in order to get the rule through.

■ **1991**

Senate passes bill requiring air bags in both front-seat positions in all passenger cars by the 1995 model year and all light-duty trucks by the 1997 model year.

BELTS

FROM PAGE 1

working to make dual air bags law. The Senate has passed the Highway Fatality and Injury Reduction Act of 1991, which would require air bags in both front-seat positions in all passenger cars manufactured after Sept. 1, 1995, and in all light trucks manufactured after Sept. 1, 1997. Its fate in the House of Representatives is uncertain.

Consumer demand, falling prices for air bags, and aggressive legislation will pre-empt any rule-making action that NHTSA might initiate as a result of its study.

According to NHTSA estimates, 685,000 air bag-equipped cars were on the road in model year 1989. In 1990, that number jumped to 2.9 million. By 1993, NHTSA expects 5 million to 6 million cars to have air bags.

In 1984, NHTSA estimated that if all cars were equipped with driver- and passenger-side air bags and all drivers and passengers wore three-point manual safety belts, some 4,000 to 9,000 lives would have been saved out of the 23,621 car occupant fatalities that occurred that year. Air bags are useful only in frontal crashes, not in side- or rear-impact crashes.

(A total of 44,257 deaths are attributed to 1984 vehicle accidents, including trucks, vans, motorcycles, buses, pedestrians and bicyclists, but only occupants of passenger cars were covered by the passive restraint rules.)

The two most popular types of passive belts are the two-point motorized and the three-point door-mounted systems.

In the first, a motorized shoulder harness automatically covers the occupant's shoulder and chest after the door is closed and the engine is started. The occupant must still attach a lap belt manually to be fully protected.

> We were guinea pigs for NHTSA to compile a database on the effectiveness of automatic seat belts
>
> **Clarence Ditlow**
> Center for Auto Safety

Ford Motor Co. and several Japanese makers widely use that system. An internal Ford survey on motorized passive-restraint belt usage in 1988 revealed a lap-belt usage of only 29 to 42 percent on systems with a motorized shoulder belt, according to William F. Eagleson, Ford's occupant protection and impact dynamics manager.

That is consistent with a University of North Carolina study that found that only 30 percent of car occupants fasten manual lap belts.

The second system, widely used by General Motors divisions, attaches the shoulder and lap belts to the rear edges of the door. In principle, the front-seat occupants should be automatically belted after slipping under the belts and closing the door. In practice, few users leave the belt buckled at the console, thus turning the door-mounted "passive" belt into a conventional, manually operated belt.

The NHTSA report is said to confirm the worst fear of safety advocates: that tens of thousands of Americans may have died because seven years ago NHTSA allowed carmakers the option of installing a variety of passive restraint systems rather than just air bags.

"The public gained, but some people lost" under the rule, says Barry Felrice, NHTSA's associate administrator for rulemaking. "We were trading off some potential safety for people who were belt users to offset that by providing protection for people who were not avid belt users. It was a tough choice — not a win-win situation."

NHTSA traded off the reduced efficiency of passive belts, which jeopardized avid wearers of manual belts, for the increased safety of some restraint for people who didn't wear manual belts. But many of the so-called passive systems are in fact used, or unused, just like manual systems.

Until this recent study, NHTSA says it lacked sufficient data to establish the safety benefits or problems associated with individual passive restraint systems.

"When we wrote the 1984 standard we didn't know how effective passive restraints would be," says NHTSA's Felrice. "Now we have many more years of data. We expect to have a statistically reliable database. We call it 'real-world data.' "

Safety experts expect new requirements for driver and passenger air bag installations — and the resulting phase-out of passive-restraint seat belt allowances.

NHTSA's critics say the agency took too long and sacrificed too many lives to come to the conclusion that air bags protect better than automatic belts.

Ben Kelly, president of the Institute for Injury Reduction, a nonprofit organization of trial lawyers, says additional data collection was unnecessary.

"You don't need high-falutin data," says Kelly. "Tests were done in Europe 30 years ago for real numbers. Car companies and NHTSA have not done the obvious thing: air bags for all cars."

Safety advocates claim too many lives were lost during the accumulation of data.

"We were guinea pigs for NHTSA to compile a database on the effectiveness of automatic seat belts," says Clarence Ditlow, executive director of the Center for Auto Safety, a safety organization traditionally critical of NHTSA.

As early as 1970, NHTSA was pushing for air bag mandates in passenger cars. But these efforts were thwarted under the Nixon and Reagan administrations in 1971 and 1981, respectively, after strong automaker protests against bags. Automakers claimed the bags were too expensive and would not be accepted by the consumer, although GM did offer bags in 1974. NHTSA finally allowed the compromise of bags or automatic belts in 1984.

> The public gained, but some people lost. . . . It was a tough choice — not a win-win situation.
>
> **Barry Felrice**
> NHTSA

"Depending on the bells and whistles and the individual vehicle," says an industry source, motorized passive seat belt systems cost about $120 for the pair of front seats, approximately $330 less than the combined cost for basic driver and passenger air bags, including manual belts.

The rules written in 1984 for passive safety mandated that automobile manufacturers must install automatic restraints in new cars, starting with 10 percent of a fleet's cars in the 1987 model year and increasing to 25 percent in 1988, 40 percent in 1989, and 100 percent in 1990. That mandate could be met with either a driver-side air bag with front-seat manual belts or automatic seat belts that fasten around front-seat occupants when the door is closed — including systems that require manual fastening of the lap belt.

A problem with that passive shoulder belt/manual lap belt system was revealed in horrifying starkness in a widely publicized

see BELTS, 33

If only bags were required and drivers belted up

If the initial air bag standard proposed by NHTSA in 1970 had gone into effect in 1974, and people used their seat belts with them, 135,000 lives could have been saved by 1991. That estimate comes from Public Citizen, a Ralph Nader-affiliated safety advocacy group.

The group estimates that 1,000 lives could have been saved in 1974, and that as bagless cars were replaced over the years, the law would have saved 2,000 lives in 1975, 3,000 in 1976, and so on until 1984, when nearly every car on the road had an air bag and 10,000 lives a year could have been saved.

The catch is that many people don't use their belts.

In 1991, it is estimated that belts are worn by only half of the people in states with mandatory seat-belt usage laws. The number is much lower in states without belt laws. Passive restraint legislation is designed to protect those who will not willingly protect themselves.

Air bags a costly choice

Air bags cost carmakers and consumers considerably more than automatic seat belts. Besides the obvious additional cost of the sensors, wiring harnesses, electronics and air-bag modules, there is the significant and costly redesign of instrument panels and steering columns for existing vehicles.

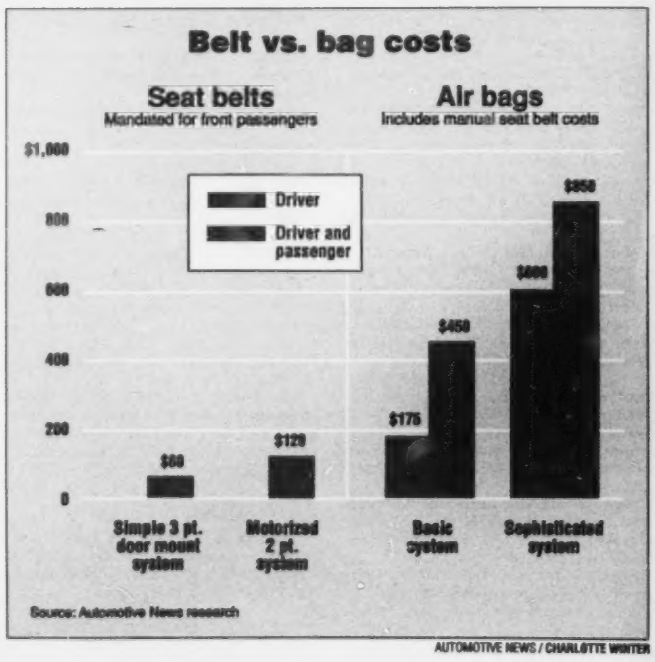
"It was a question of practicality," says William F. Eagleson, occupant protection and impact dynamics manager at Ford Motor Co. "We wanted to phase them (air bags) in on some type of planned schedule."

While still more expensive than belts alone, air bags have dropped dramatically in cost in the last two years. A bag system used to cost between $500 and $1,000.

Now, a domestic automaker source says a basic driver-side air bag, including manual lap belts, costs up to $175, depending on the vehicle model. Adding a passenger-side air bag costs $270 more.

European makers frequently use more complex systems and pay as much as $600 to protect the driver with an air bag. A bag for the passenger would add about $250, according to a supplier source.

A motorized two-point belt system for driver and passenger costs Ford Motor Co. approximately $120. Non-motorized automatic belt systems cost substantially less.



AUTOMOTIVE NEWS / CHARLOTTE WINTER

Automakers have frequently cited the high cost of air bags as a reason for considering other passive-restraint methods.

But safety engineers acknowledge that prices are plummeting as suppliers streamline production methods, technology improves and volume increases. One domestic-maker source told *Automotive News* that the company hopes to be paying $85 for a driver-side bag and $100 for a passenger-side bag "within the next few years."

— Jack Keebler

EARNINGS

FROM PAGE 4

surprises in GM's April to June results.

But he already has reduced his earnings estimate for the third quarter because GM has scheduled 57,000 fewer vehicles than he expected. GM now plans to build 1.1 million cars and trucks in the United States and Canada in the July-September period.

Glantz said he expects a slight reduction in third-quarter incentive costs, but has increased his estimate of GM's third quarter loss to nearly $800 million.

Second-quarter worldwide factory sales totaled 1.9 million units, off 10.6 percent from the same period last year. GM said total overseas profitability was good, with record second quarter results in Europe and improved operations in Latin America.

GM's Electronic Data Systems Corp. subsidiary reported second quarter earnings of $139.8 million, up 12 percent from year-ago. General Motors Acceptance Corp. posted net earnings of $233 million in the second quarter, off 6.3 percent from last year, and GM Hughes Electronics said its second quarter earnings declined 39.7 percent to $114 million.

Ford Motor Co.

David McCammon, vice president of finance and treasurer for Ford, says he doesn't expect improved results the next three months because "the third quarter typically is the worse one of the year."

Ford's losses of $324 million or 68 cents a share for the second quarter increased the company's total losses for the first six months to $1.2 billion. Last year at June 30, Ford had earned $1.3 billion.

Ford's automotive operations in the United States accounted for almost all of the company's loss for the second quarter. The company's U.S. automotive division sold 133,000 fewer cars and trucks than it did a year ago and reported a loss of $565 million, compared to earnings of $356 million a year ago.

Automotive operations outside the United States contributed a $2 million loss.

Earnings of $243 million from Ford's Financial Services Group saved the company from reporting much higher losses for the quarter.

McCammon says it's pretty clear that Ford will report a loss for the entire year, but he would not make predictions for 1992.

"We're more of a blue collar company," especially Ford Division which sells lower-priced vehicles, "so our products are hurt more when there is a recession," McCammon said.

He said about 40 percent of the company's Ford and Lincoln-Mercury dealers were unprofitable through June 30. Total dealer inventories were about 700,000 units, down from 825,000 units after the first half last year, he said.

In other highlights, automotive operations cash rose from $6 million the first quarter to $6.7 million, primarily due to an 80 percent transfer of Ford's tractor operation to Fiat S.p.A. on May 6; worldwide automotive capital spending was down $476 million, with two-thirds of that cut in Europe. McCammon said there were no important product programs cut in the United States.

McCammon said the company has achieved over half of its $3 billion cost-cutting goal for this year.

He predicts a 2 percent growth in the economy the second half of the year but says auto sales will remain below normal rates.

Chrysler Corp.

Chrysler curbed its second quarter losses, but it is paying a much higher price for the cars and trucks it sells.

Chrysler lost $212 million for the three months ended June 30, on total sales of $7.81 billion. The loss was an improvement over the $341 million loss for the first quarter, but was still off sharply the second quarter 1990, when it earned $180 million.

Chrysler lost $810 million in the first six months of 1991 on total sales and revenues of $13.61 billion, compared to a profit of $251 million in 1990 on sales of $16.48 billion.

Chrysler's cash position in automotive operations improved by $400 million to $2.4 billion; its total consolidated cash and marketable securities, including Chrysler Financial Corp., increased $558 million to $3.1 billion.

At June 30, the company had negative net working capital of $2.7 billion, about the same as at the end of the first quarter, according to Maryann Daddow, Chrysler's manager of external reporting.

Chrysler is paying a hefty price for its sales. The company's average incentive costs increased by $196 to $1,296 per vehicle in the quarter.

Still, Chrysler Chairman Lee A. Iacocca said, "The economy and the industry both showed some improvement in the second quarter as customers slowly came back to the market. That helped our results."

Iacocca credited increased sales volumes, a better retail/fleet mix and the company's cost reduction with improving its position.

"By the end of the quarter, we had all the actions in place necessary to generate an on-going savings of $3 billion annually, counting from July 1989 when we started the program," Iacocca said. "And that should help us during the model changeover in the third quarter, when the industry typically experiences large cash outlays."

He said the company's cost reduction program enabled it to keep its $16.4 billion five-year product development program "in place and on schedule. In fact, some of it is even ahead of schedule," Iacocca said.

"If the market continues to improve, we should be in pretty good shape in the second half of the year," he concluded.

Chrysler retailed 883,442 cars and trucks in North America during the first half of the year, down from 1,022,182 units in the comparable period of 1990.

Its first-half worldwide factory sales of 898,653 units were off from 1,079,227 a year ago.

Mitsubishi pays buyers, dealers

DARRELL PRESSLEY
Special Correspondent

Mitsubishi Motor Sales of America Inc. is offering a wide array of regional incentive programs for customers and dealers on 1990 and 1991 cars and trucks.

The only national program for consumers is a $750 rebate to buyers of Mirage models, and the only other consumer payments are to buyers in Hawaii — $1,000 on the Galant and Eclipse, $1,250 to $1500 on pickup trucks and $1,500 on the Montero.

On the dealer side, rebates of $250 to $750 are offered on Mirage models in all regions.

Other payments to dealers vary by regions. There are rebates of $200 to $2,000 on the Galant and $200 to $1,500 on the Eclipse, Montero and pickup trucks. Some are based on number of units sold; others are based on on performance against quota.

In Hawaii, Mitsubishi offers the best of both worlds on the Galant, Eclipse, Montero and pickups. Customer rebates of $1,000 to $1,500 are in effect, and so are dealer rebates of $500 to $750.

The programs expire Sept. 30 in California and Hawaii and Aug. 31 in the Northeast, North Central, Southeast and Southwest regions.

A new round of incentives is on tap for Ford Motor Co. and several import lines.

Ford dealer and customer incentive programs expire Tuesday.

Wednesday is the expiration date for Saab's cut-rate loans, and and a rebate for buyers of Mazda trucks is due to end Friday.

Dealer rebates slated to expire this week involve the Honda Civic; the Mazda MPV; the Toyota Camry, Corolla and pickup trucks; the Suzuki Swift and Sidekick models and most Nissan models.

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.
Finance rates in lieu of rebates start at 7.9 percent on minivans, 2.9 percent on other models. Programs expire Sept. 30.

Poor sales, changeovers shut plants

BOB DeMAYER
Special Correspondent

Thirty-one Big 3 assembly plants are down this week, 24 because of model changeovers and seven because of slow sales.

At General Motors, 20 plants are closed for changeovers, and four plants are idle because of poor sales. One Ford Motor Co. plant is down because of slow sales. Chrysler Corp. has four plants out of action for model changeovers this week and two plants down because of slow sales.

Also because of lagging sales, production of the Ford Mustang at the Dearborn, Mich., assembly plant will be reduced from the present 46.3 cars per hour to 35 cars per hour as of Sept. 30.

The Mustang plant has been idled a total of 13 weeks since January because of a lack of orders. The small specialty segment of the market has been hurt severely by the poor economy, resulting in a 105,000-unit decline in production for the first six months of 1991 compared to the same period in 1990, Ford said.

About 400 of the 2,200 employees at the Dearborn plant will be affected by the reduction in line speed. Ford is examining opportunities to reassign them to other facilities.

Auto manufacturers scheduled 80,526 cars last week, down 12.89 percent from the preceding week and down 16.82 percent from last year.

Year-to-date, U.S. car production is 3,074,894, down 12.70 percent from 1990.

Truckmakers planned to build 60,893 units last week, down 15.31 percent from the prior week and down 22.96 percent from the 1990 week.

So far this year, 1,870,855 trucks have been assembled, 20.18 percent behind 1990.

GM scheduled two shifts of overtime last Saturday at its Baltimore minivan plant. The plant, which is the sole source of Chevrolet Astro/GMC Safari output, resumed production last Monday after a 26-day strike (story on Page 4).

All Chrysler plants were closed for vacation last week.

CANADA: Canadian car production was estimated at 8,145 last week, down 53.48 percent from the prior week and down 49.38 percent from the year-ago week.

Truck production last week was estimated at 4,601, down 29.58 percent from the prior week and down 55.02 percent from the year-ago week.

Year-to-date, truck production in Canada is down 3.47 percent.

Ford scheduled one shift of daily overtime this week at its St. Thomas, Ontario, car plant.

Consulier claims powerful four-seater would get 40 mpg

RIVIERA BEACH, Fla. — Consulier Industries says it will produce a car capable of acceleration to 60 mph in 6.0 seconds that achieves 40 mpg.

Consulier claims the secret to the four-seater's performance is low weight. The company claims that with advanced composite construction it will weigh the same as a Honda Civic. With a 170-horsepower engine, it will provide "the street performance of a Corvette."

Consulier engineers say that with a monocoque structure composed of a low-density foam core composite, the car will weigh half what its competitors weigh and ride like "a $40,000 touring car." The company builds a lightweight two-seater of similar construction.

GM seeks most bang for the buck

Capital cutbacks put immediate focus on high-profit lines

Last in a series of articles exploring product plans of the U.S. Big 3 and Asian and European automakers.

PHIL FRAME
Staff Reporter

Pragmatists have taken over the future-product plan at General Motors, where tight capital is forcing tough decisions on new vehicles.

A $500 million capital-spending cutback over the past year has forced GM to make some major shifts in its 10-year product plan.

Resources have been focused on programs that will deliver the most bang for the buck. The Japanese standard of renewing cars every four or five years won't carry the day at GM.

Instead, the company is picking its spots. GM has accelerated Buick, Oldsmobile and Cadillac programs that yield high profits. It is tweaking other products while postponing overhauls. Blame the two-year industry downturn, war and recession for the change.

The automaker's $7 billion annual budget for capital expenditures through 1994 is $500 million less than it would be if more money were available.

If past spending patterns

hold, 80 percent, or $5.6 billion a year, will be earmarked for vehicle programs, including parts, plants and tooling. While that still is a princely sum, it must cover the cost of replacing

Mitsubishi, Honda claim gains with 'lean-burn' engines

Big 3: Small cars are only winners

JACK KEEBLER
and MARY ANN MASKERY
Staff Reporters

The separate introductions last week of new fuel-efficient engines by Honda Motor Co. and Mitsubishi Motors Corp. show that the traditional gasoline engine has not yet hit the outer limits of development, according to many analysts and engineers.

But the new "lean-burn" engines do not represent any technological breakthroughs and, because they pose some emissions problems, do not really advance the CAFE argument in the United States, experts say.

And Japanese executives and Big 3 engineers alike were quick to point out that the new engines can, at least for the foreseeable future, be used only in the smallest cars, thereby limiting their market appeal.

"This technology allows us to achieve quite better fuel economy without sacrificing performance," Honda President Nobuhiko Kawamoto said in remarks quoted by *The New York Times*.

"But I don't know how well it will sell. Consumers these days are not so concerned with saving gasoline," he said.

The two Japanese automakers introduced 1.5-liter, four-cylinder engines that offer claimed fuel-economy gains of 10 percent, in Honda's case, and 20 percent for Mitsubishi, without loss of power.

Honda said it had achieved a 10 percent increase in fuel efficiency on the basis of changes in the engine alone. But it said it expects the home-market version of its new Honda Civic to be 20 percent more fuel efficient than its predecessor as the combined result of the engine and engineering changes to the car itself.

Honda said tests by Japan's Ministry of Transport showed that the new Civic, equipped with the lean-burn engine, traveled 49 miles on a gallon of gas in city driving, and more than 88 miles per gallon at a constant speed of 37 mph on the track.

But Honda did not suggest that similar improvements are possible in the United States, where test standards and driving habits are much different.

Honda said the new Civic, due in the United States next month, is expected to attain an EPA rating of 48 mpg city/55 mpg highway, compared with the existing Civic CRX (HF) rating of 49/52 mpg.

But the HF model, which ac-

Ford will charge dealers 1% of sticker for '92 ads

KATHY JACKSON
Staff Reporter

With its eyes on Chevrolet and Toyota, Ford Motor Co. will require its dealers to pay a set fee for local association advertising costs.

Beginning Sept. 1, Ford and Lincoln-Mercury divisions will assess their dealers a marketing charge equal to 1 percent of the sticker price of each car and truck ordered. The money will go to local Ford and L-M advertising committees, which may assess their members an additional charge of up to 1 percent.

Ford's dealer advertising money has fallen compared to competitors as its sales have dropped in the last two years.

By requiring the fee, Ford is joining General Motors and Chrysler Corp.

Currently, Ford's local advertising associations determine the ad fee. Those fees range from $50 to $150 per vehicle for Ford dealers and from $75 to $290 for L-M dealers.

But a memo from Ford Division regional managers to dealers last month said that due to declining factory orders, Ford dealer contributions have fallen from 180 percent of Chevrolet dealer association contributions in 1988 to 80 percent last year.

Ford Division spokesman Mike Parris said that about 45 of the 62 Ford dealer associations are getting 1 percent of sticker or more from their dealers. He said that by requiring all associations to collect at least 1 percent, Ford contributions should "be on par with the industry."

Chevrolet and GMC Truck instituted a mandatory 1 percent charge in 1988. Toyota dealers contribute $185 to $300 for each vehicle ordered, generally well above 1 percent of the sticker.

This scene from the 1990 L-M announcement show held two years ago in Atlanta won't be repeated at this year's "zero glitz" show.

SHOW TIME

But the glitz is gone; dealer intro meetings stress business

ANN M. SABTY
Special Correspondent

It won't be the same old song and dance for dealers attending this summer's new-model announcement shows.

Many dealers will find themselves at business conferences rather than at the Las Vegas-style productions they've come to expect.

"It looks bad to have singing and dancing if business is dying," says David Piel of Sausalito, Calif., recognized as one of the top stage managers in the country.

That was seconded by Richard Marshall, a Subaru of America Inc. spokesman. "Our shows are becoming more businesslike," he says. "They are more focused on the business aspects and less on the frills, probably because of the shape that the economy is in right now. The shows are now just focused on the business at hand, that is just showing the product to the dealers."

The shows either travel across the country to the dealers or the dealers travel across the country to the shows.

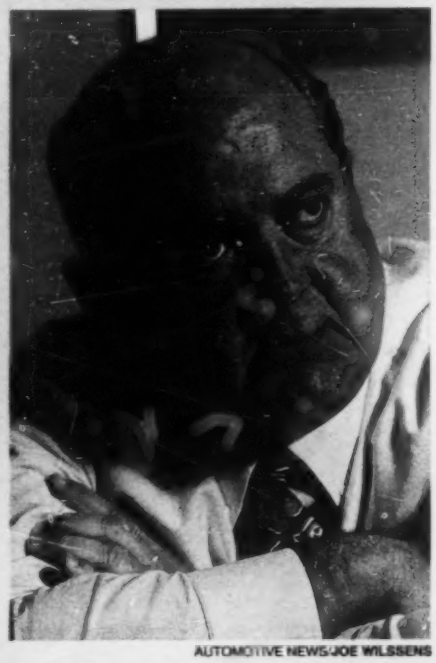
Pappert a 30-year survivor:
As Chrysler's vice president of sales, E. Thomas Pappert walks a tightrope between the automaker and its 5,200 dealers. Story on Page 3.



AUTOMOTIVE NEWS/JOE WILSSENS

Dealers describe E. Thomas Pappert, Chrysler's vice president of sales, as "tough," "straightforward" and "willing to take the heat."

Rapport earns Pappert Chrysler dealers' respect

MARY CONNELLY
Staff Reporter

HIGHLAND PARK, Mich. — E. Thomas Pappert looks like a typical Detroit auto executive — until the sleeve of his suit jacket inches up to reveal a Mickey Mouse watch.

The watch provides a glimpse of Pappert's sense of humor and his rationale for wearing it may be one of the reasons that Chrysler Corp.'s vice president of sales has managed to flourish in his 30 years in the auto business.

"It kind of keeps your perspective on life," Pappert says of the watch his brother gave him. "You can't take yourself or life too seriously. I wear it once in a while, not every day."

These words from a man described as "tough," "straightforward" and "willing to take the heat" by dealers.

Pappert's job is to represent the factory to dealers and the dealers to the factory. He has managed to survive nearly 30 years at Chrysler, weathering the company's near brush with death, executive suite turnover and management exodus.

In three decades in the auto business he has watched government regulators, Japanese makers and American car buyers transform the business.

He has emerged as an executive with a dry sense of humor who is quick to the quip. And he has garnered respect. The word used most often by colleagues and dealers to describe Pappert is "honest."

"There is never any double talk with him," said one member of the Dodge National Dealer Council. "He tells it straight. He has always leveled with the council. When he couldn't do something he would say so. He never said 'yes' or 'maybe' when he couldn't do it."

Notes Phillip Brown, chairman of the Chrysler-Plymouth National Dealer Council, "Pappert knows what's on dealers' minds."

Pappert gained that knowledge by working his way up in Chrysler's field operations throughout the country since joining the company as a sales trainee in 1962. During his career he has made stops in Charleston, W.Va.; Pittsburgh; Jacksonville, Fla.; Orlando, Fla.; Kansas City, Kan.; Chicago; and San Francisco.

But in the last year, he also has toured all 25 Chrysler sales zones, taking the pulse of dealers and buttressing their confidence during the industry

Backshop and used-car sales boost '90 revenue for dealers

CHARLES M. THOMAS
Staff Reporter

Total sales for the average U.S. car dealership rose a scant 1.5 percent to $12.6 million in 1990 from 1989, according to the upcoming National Automobile Dealers Association 1991 Data Book.

The rise came from the parts and service department and the sales of used vehicles — not from the new-car department, which has declined steadily since 1987.

New-vehicle department sales slipped 0.8 percent to $7.68 million in 1990 from $7.74 million in 1989.

"As profits on new cars eroded, dealers looked to other sources to improve revenues," said Frank Anderson Jr., NADA president and owner of Sir Walter Chevrolet in Raleigh, N.C.

Largely because of the increase in resales of daily-rental-fleet cars, sales of used vehicles rose 4.5 percent to $3.02 million in 1990 from $2.89 million in 1989. Used-vehicle sales as a percent of total sales have been rising steadily since 1985.

The rental or "program" vehicles are repurchased by manufacturers from the daily-rental companies and distributed to dealers though auto auctions. Manufacturers are expected to sell 1.5 million program vehicles in 1991.

Service and parts department sales rose to $1.93 million from $1.82 million, or 6.3 percent. Service and parts sales as a percent of total sales has increased steadily since 1986.

And the average net worth of dealerships increased to $848,000 in 1990 from $802,243, or 5.7 percent, largely due to reduction of debt by dealers.

"There has been some debt liquidation by dealers, and more of them are retaining more money in their businesses," said Anderson. "They are holding onto their capital."

The average transaction price of a new vehicle rose 3.2 percent to $15,900 from $15,400 in 1989. In 1984, the average price was $11,100.

"Many of the imports introduced upscale vehicles like Lexus and Infiniti, which would account for the increase in the average transaction price of vehicles," said Anderson.

The 1991 *Data Book* will be sent to dealers during the next few weeks.

AVERAGE DEALERSHIP PROFILE

	1989	1990	% change
Total dealership sales	$12,450,814	$12,631,835	+1.5

Lexus thinks its aggressively styled ES300 sedan will appeal to "leading-edge" baby boomers — 35- to 45-year-olds who make $55,000 to $125,000 annually.

NEW SPINS ON LUXURY

Lexus ES300 sheds Camry-clone image for wealthier buyer

KRISTINE STIVEN BREESE
Staff Reporter

NAPA, Calif. — When Lexus introduces the ES300 next month, it will have its first solid entry in the "near luxury" segment Lexus entered two years ago.

The aggressively styled 3.0-liter V-6 sedan will be pitted against a cadre of me-too $20,000-to-$30,000 entries that arrived after Lexus launched its first "entry-level" model, the ES250, in September 1989.

How the ES300 measures up ➤ 15

Shoichi Miyagawa, chief engineer on the ES300, said his goal was to bring the car more fully "in line with our customers' expectations" for Lexus. As such, the ES300 is bigger, more spacious and more powerful than the car it replaces.

And it will face competition that didn't exist two years ago, such as the Mitsubishi Diamante, Acura Vigor and Infiniti G20, as well as some revamped competitors: the BMW 3 series, Mazda 929 and Acura Legend.

Lexus believes the ES300 will be able to attract customers that the ES250 never reached, despite a higher price tag. The ES300 is expected to start in the mid-$20,000 range; the ES250 lists for $21,500.

Eldorado shaped for the traditional, and younger, buyer

PHIL FRAME
Staff Reporter

TRAVERSE CITY, Mich. — The 1992 Eldorado represents the second step in Cadillac's attempt to offer contemporary designs that appeal to younger buyers.

Seville, Eldorado's platform sibling that was unveiled early this year, was the first step. In designing the Eldorado, Cadillac sought to create a different image, separate from the Seville.

Until now, the cars were nearly twins — the Seville a slightly longer, four-door version of the Eldorado. While the pair do have a family resemblance for 1992, Cadillac says they share only one exterior panel: the windshield.

Cadillac's designers tagged the angular 1992 Eldorado "the needle" while the platform-sharing Seville was nicknamed "the greyhound."

Unlike the more rounded Seville sedan, the Eldorado was sculpted as an aggressive luxury coupe with angular body lines, said Richard Ruzzin, who headed Cadillac's exterior design studio before becoming head of Adam Opel AG studios last month.

INTRO-'92

"When we were doing the Seville, we nicknamed it 'the greyhound' because of the rounded, muscular look," Ruzzin said. "We called the Eldorado 'the needle' because it's sharper and really goes off in a different direction."

"Coupes are more of an American phenomenon, so an Eldorado buyer is going to be somewhat more traditional," a Cadillac spokesman said.

While the two cars are aimed at people with different tastes, the customer demographics are the same: 30 to 60 years old, $70,000

Ford, GM clean up '91 luxury cars

Chrysler ups rebate payments; Honda, Suzuki extend programs

ARLENA SAWYERS
Staff Reporter

Ford Motor Co. dropped 1990 vehicles from its incentive schedule and, along with General Motors, added its 1991 luxury cars to the cleanup rebate list.

Also, Chrysler Corp. increased payments to customers on some 1990 and 1991 cars, and American Honda Motor Co. Inc. and American Suzuki Motor Corp. extended their dealer incentive programs.

Ford Division and **Mercury** are paying consumer rebates of $500 to $1,600 on cars. Consumer incentives on **Ford trucks** range from $500 to $2,000.

In lieu of rebates, consumers may choose cut-rate financing of 2.9 to 7.9 percent — specific rates depend on the vehicle.

Customer rebates on Mercury Sable and Ford Taurus, Econoline and Aerostar are higher in Northeastern states than in other areas of the country. Rebates on Ford Mustang and Festiva and finance rates on Festiva vary by region.

Additionally, Ford and Mercury dealers receive a $1,000 rebate on sales of 1991 Crown Victoria and 1991 Grand Marquis models.

Lincoln is offering consumers a $2,000 rebate on the 1991 Town Car, Mark VII and Continental.

The Ford, Mercury and Lincoln programs expire Sept. 25.

Also through Sept. 25, **Cadillac** is paying customers $1,500 on the 1991 Seville and Eldorado, $2,000 on the 1991 DeVille and Fleetwood and $2,500 on the 1991 Brougham.

Chrysler increased customer incentives on several models.

New rebates are: $2,000 on the 1990 and 1991 Chrysler Imperial; $1,500 on the 1990 and 1991 New Yorker Salon, 1991 **Dodge** Dynasty and 1991 Dodge Shadow convertible; $1,000 on the 1991 **Plymouth** Laser RS Turbo and **Eagle** Talon TSi.

Added to the consumer rebate program are the 1991 Dodge/Plymouth Colt Vista at $500.

Alternative financing from 2.9 to 9.9 percent, depending on contract length, remains the same. Company incentives end Sept. 30.

Honda extended the factory-to-dealer incentive of $400 on 1991 four-door Civic through Sept. 3.

Suzuki revised and extended its incentive payments to dealers through Oct. 3. It is now paying dealers $700 to $1,000 on the 1990 and 1991 Swift and the 1991 Sidekick. Incentives on the 1990 Sidekick, which expired Aug. 2, were not renewed.

Special Correspondent Darrell Pressley contributed to this report.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

GENERAL MOTORS (1991 models. Expires Sept. 25)

Cadillac Seville, Eldorado	$1,500
DeVille, Fleetwood	$2,000
Brougham	$2,500

FORD MOTOR CO.
(1991 models. Finance rates in lieu of rebates start at 2.9 percent on Escort, 4.8 percent on Festiva, 7.9 percent on other Fords and Mercurys. There are no finance incentives on Lincolns. Programs expire Sept. 25.)

Ford Festiva, Mustang	$500-1,000
Escort	$500-750

Swift (1990-91)	$700-1,000
Sidekick (1991)	$700-1,000

VOLKSWAGEN

All cars (1990, no expiration date)	$500-1,500

VOLVO (expires Aug. 18)

740 and 940 (1991)	$1,500

1992 Porsche 968 unveiled

Here's an early look at Porsche's 968, due in showrooms this November as the successor to the 944. Styling elements borrowed from the 911 or the 959 supercar include large round headlights, fenders raised above the hood line and integrated fog lights. Power comes from a 3.0-liter, four-cylinder engine with electronic variable valve timing and a Bosch Motronic engine management system.

Ford ad campaign touts service after the sale

ARLENA SAWYERS
Staff Reporter

Ford Motor Co. is renewing its effort to keep its current customers happy with a new $16 million ad campaign emphasizing quality service after the sale.

The "Quality Care" campaign claims, "It may be your car, but it's still our baby" and plays on the feeling many people have that their vehicles are part of the family.

The campaign will debut nationally in publications and on radio Aug. 12.

Thomas J. Wagner, general manager of Ford Parts and Service Division, said the campaign marks a new dedication to customer service at Ford.

"It's more than just advertising," said Wagner. "This program is an implied promise to customers that we're interested in him or her, the car and how we relate to each other."

Wagner said studies indicate that customer satisfaction is severely hampered when customers have to go to a dealership more than once for the same problem and when they don't get their vehicle back when promised.

Ford, said Wagner, has greatly curtailed such problems over the years with skilled service technicians in dealerships and new diagnostic equipment such as the Service Bay Diagnostic System to help service people make fast, accurate vehicle diagnosis.

Also, Ford has intensified its efforts to improve service employees' people skills by enrolling them in human relations courses.

Wagner said dealers are receptive to the program because they understand that their survival in a highly competitive market depends as much on service as sales.

"Dealers are very pragmatic people," said Wagner. "They make decisions based on how it will affect them in the near term. The people who weathered the industry downturn the best are people who had a strong concentration on the parts and service end of the business."

Ford Parts and Service Division's ad agency, Ogilvy & Mather, is showcasing the division's renewed customer service efforts in an ad that positions Ford and its dealers as a surrogate family to their vehicles and customers.

The three-page print ad features panoramic shots of a stately rural home and stable.

The copy on the first page reads: "You feed it. You talk to it. You scrub it in places no one else would. But when it's not feeling well who shares your concern?"

The ad opens to a two-page spread which explains Ford's expertise in customer service. The copy ends with "After all, we are family."

In the center of the ad is the "It may be your car, but it's still our baby" tagline in bold letters.

The print ads will appear in several magazines including *Time, Newsweek, Car and Driver, Sports Illustrated* and *Ebony*.

Ogilvy & Mather also created three 60-second spots for national radio which star humorist and author Daniel Pinkwater.

For dealer associations, the agency created print ads and shorter versions of the radio spot. Ford will pay half the media costs for dealer groups which use the ads.

GM loses N.J. tax appeal

LINDEN, N.J. — General Motors had asked for a decrease in the property tax assessment on its Linden assembly plant. Instead, the automaker last week received a whopping tax increase from the New Jersey Tax Court.

GM had sought a reduction on its Linden assembly plant assessment of $22 million to $28 million, based on market value of $59 million to $67 million. But the New Jersey Tax Court placed the true market value at $94 million.

"GM lost its appeal and received an assessment increase of approximately $1.5 million in additional taxes for the years under appeal," said a spokeswoman from the Detroit law firm of Miller, Canfield, Paddock and Stone.

The automaker was dealt another defeat in early July by the Michigan Tax Tribual in a similar case in Comstock Township. GM has tax assessment appeals pending in other Michigan communities.

A GM spokesman said company lawyers are still reviewing the New Jersey decision.

He said the New Jersey decision will not affect assessment appeals by GM in other communities.

Ford to hike line speed on F pickup

BOB DeMAYER
Special Correspondent

Truck production at Ford Motor Co.'s Kansas City, Mo., assembly plant will be increased from 38 vehicles per hour to 45 vehicles per hour when output of 1992 models begins Aug. 12.

The plant has added 150 hourly workers to handle the increase and for the new $200 million paint facility that will come on stream with the start of 1992 production. Earlier, 100 employees were added at the plant.

The plant assembles Ford's F-series pickup truck. Returning to the lineup for 1992 is a Flareside pickup that will go into production in November.

Thirteen General Motors and Chrysler Corp. assembly plants are down this week, 12 because of model changeovers and one because of slow sales.

At GM, 10 plants are closed for changeover, and the Tarrytown, N.Y., plant is idle because of poor sales. Tarrytown builds the Chevrolet Lumina APV, the Pontiac Trans Sport and the Oldsmobile Silhouette minivans.

At Chrysler, the Belvidere, Ill., and Newark, Del., plants are out of action for model changeover.

U.S. car and truck production surpassed five million last week. Last year, that total was reached nearly six weeks earlier.

Automakers scheduled 79,343 cars last week, down 73 units from the preceding week and down 17.4 percent from 1990.

Year-to-date, U.S. car production is 3,153,127, down 13.2 percent from 1990.

Truckmakers planned to build 43,400 units last week, down 27.5 percent from the prior week and down 40.3 percent from last year.

So far this year, 1,913,217 trucks have been assembled, 20.6 percent behind 1990.

No overtime is scheduled at any U.S. assembly plant this week.

CANADA: Canadian car production was estimated at 10,484 last week, down 13.5 percent from the prior week and down 24.4 percent from same week last year.

So far this year, 633,956 cars have been assembled, 2.3 percent more than last year at this time.

Last week's truck output of 10,381 more than doubled the week-ago and year-ago totals.

Year-to-date, truck production in Canada is 472,267, down 8.0 percent from last year..

Ford scheduled one shift of daily overtime this week at its St. Thomas, Ontario, car plant.

GM's Scarborough, Ontario, van plant is down for changeover this week, and Chrysler's Pillette Road plant (Dodge Ram Van/Ram Wagon) is closed because of poor sales.

Riegle blasts delay in Honda content fine

WASHINGTON — Sen. Donald Riegle last week lashed out at the U.S. Treasury Department for what he called the sidetracking of a $20 million penalty proposed against Honda Motor Co. Ltd.

The Japanese automaker is accused of incorrectly stating the North American content level of its Canadian-made Civics in order to qualify for duty-free clearance into the United States.

"This company has been cheating the United States of America," Riegle shouted at a hearing Tuesday of the Senate Finance Committee, which the Michigan Democrat chairs.

Riegle contended that the Treasury Department pressured the Customs Service to sidetrack the proposed penalty. Treasury denied the allegation. Customs Commissioner Carol Hallett said no penalty has yet been proposed because the Customs Service is still investigating whether Honda passed off as American-made some cars that were as much as 62 percent foreign-made.

"No one has interfered," Hallet told the committee. "No one has slowed it down. . . . I am very proud of my record enforcing these (trade) laws."

Riegle shot back: "You shouldn't be on this issue. You've got to figure out which side you are on, and so does this administration."

Canadian cars must contain at least 50 percent North American content in order to qualify for duty-free export to the United States under the two countries' free-trade agreement. U.S. Customs officials and Honda — as well as a General Motors-Suzuki Motor Corp. joint venture in Canada — have disagreed over what constitutes North American content.

In a Customs memo that was recently leaked to the media, Hallett wrote "we have determined" Honda did not qualify for preferential tariffs on some cars because they did not meet the requirement that at least half their content be American. Customs, she wrote, was ready to "begin action immediately" to collect penalties from Honda.

Honda management in the United States, Canada and Japan was furious over the revelation of Customs' position and immediately complained to the Treasury.

Big 3 hike '92 prices $540 despite sales drought

JOHN K. TEAHEN JR.
Senior Editor

Along with a host of other problems, the Big 3 must battle a monster of their own making in the 1992 model year: a sizable price increase.

Despite the year-long sales downturn, the three manufacturers have scheduled an average boost of $540, or 3.05 percent, on their 1992 cars, an *Automotive News* analysis discloses.

That is considerably more than the average of $328, or 1.98 percent, that General Motors, Ford Motor Co. and Chrysler Corp. tacked onto 1991 models at introduction time a year ago.

1992 PRICE HIKES ON BIG 3 CARS

Adjusted for equipment changes

	Increase	Pct.
Chrysler Corp.	$215	1.40
Ford Motor Co.	625	3.70
General Motors	570	3.10
Big 3 average	540	3.05

Not adjusted for equipment changes

Chrysler Corp.	616	4.04
Ford Motor Co.	796	4.70
General Motors	901	5.19
Big 3 average	830	4.88

All figures are sales-weighted.

The $540 increase is on comparably equipped autos. Before comparing prices, automakers add to the old stickers the price of optional equipment that will be standard on the new models.

On a straight sticker-to-sticker comparison — without any equipment adjustments — the 1992 Big 3 cars are up an average of $830, or 4.88 percent.

Once again, that is considerably steeper than last year's bump of $644, or 4.10 percent.

All figures in this article are sales-weighted, both for the individual companies and for the Big 3 as a group. Sales-weighting means that the increase on each car line is balanced against that line's share of the company's total sales.

For example, an increase on a Chevrolet Cavalier is given much more "weight" than a similar increase on a Cadillac Allante because GM sells 80 times as many Cavaliers as it does Allantes.

Complete Chrysler, GM prices > 8

The huge spread between the non-adjusted price hike ($830) and the adjusted increase ($540) indicates that the automakers have added a great deal of standard equipment on their 1992 models.

Air bags and anti-lock brakes are among the new standard features, and both are big-ticket items, often running $800 to $1,000. Neither has lit up the sales charts as an extra-cost option. Most new-car shoppers probably will consider them out-and-out price hikes.

The *Automotive News* analysis finds that Ford's $625 is the biggest 1992 increase after adjusting for equipment changes. GM's $901 is tops on a non-adjusted basis.

Here are the non-adjusted and adjusted price hikes for the Big 3 on 1992 models and at introduction time last year:

Chrysler, $616 and $215 for 1992; $182 and $135 for 1991.

Ford, $796 and $625 for 1992; $452 and $312 for 1991.

GM, $901 and $570 for 1992; $878 and $389 for 1991.

After the makers study their rivals' stickers, there could be changes in some models.

THE END

Sterling loses its battle for an American niche

JIM HENRY
Staff Reporter

NEW YORK — Sterling Motor Cars, the company that bet an English country manor that you couldn't find a better car for the same price, last week bought the farm.

But the free manor, like most of its other efforts during the last four years, failed to boost sales. Last week, Sterling's parent company announced that it would quit selling cars in the U.S. market. It followed Automobiles Peugeot, which quit less than 72 hours earlier.

Like Peugeot, Sterling's parent company Rover Group said it was forced to turn its back on the United States in order to tend to its markets in Europe.

"A combination of the business and economic conditions, and the major future investment required to make Sterling a truly successful brand in the U.S.A., indicate that it would be best for the group as a whole to concentrate its future resources on the development of other markets," said George Simpson, Rover Group chief executive.

Miami-based Sterling tried everything to succeed in the United States, from gimmicks like the country manor offer to $5,000 rebates and free floorplanning for dealers. But it was never able to stem a free-fall that began after its introduction by independent importer

Slow sales bury Peugeot after 34 years in U.S.

JIM HENRY
Staff Reporter

LYNDHURST, N.J. — In the time it took to transmit a fax, France's Automobiles Peugeot last week ended its 34-year-long attempt to carve out a meaningful niche for itself in the U.S. marketplace.

Conceding that its new flagship 605 luxury sedan would not appeal to American buyers in sufficient numbers to end its long sales drought here, the French automaker told its Peugeot Motors of America subsidiary to shut down by the end of the year.

The decision will not affect service and parts operations, which could remain open for as long as 10 years, Peugeot said.

"I think they made an entirely realistic decision," said Ian Robertson, senior editor and analyst of the London-based Economist Intelligence Unit.

"They are a volume producer with no real image in the luxury

Moran's World Omni finance arm is part of the Florida complex that houses Southeast Toyota's headquarters.

Storm gathers over Moran empire

Lawsuits allege independent Toyota distributor wrecked dealers

LINDSAY CHAPPELL
Staff Reporter

Toyota's giant distributor in the Southeast, whose right to operate is under scrutiny by the state of North Carolina, is facing growing opposition from dealers challenging the way it does business.

At least 10 dealers in Florida, Georgia, Alabama, North Carolina and South Carolina have filed separate suits in recent months against Southeast Toyota Distributors Inc. of Deerfield Beach, Fla., one of two remaining independent Toyota distributors. Four other similar suits are on file from the past two years, and plaintiff attorneys say more are now in the works.

The charges include racketeering, fraud and extortion. Several complaints list Toyota Motor Sales U.S.A. Inc. of Torrance, Calif., as a co-defendant.

The issues have already caused the Department of Motor Vehicles in North Carolina to call for a Sept. 16 hearing into Southeast's business practices. That hearing could result in the revocation of Southeast's distributor license in that state and jeopardize Southeast's lucrative contract with Toyota.

The challenges also promise to once again test the business acumen of the distributor's owner and automotive retail giant, 73-year-old James Moran.

Moran has been successfully sued by Toyota dealers before and prosecuted by the U.S. Justice Department over tax evasion charges. But he continues to preside over one of the most successful private automotive companies in the country, an empire that generates an estimated $2.4 billion a year in Toyota-related revenues and employs 2,400 people in five states.

The claims, strongly denied by Southeast's corporate attorney, charge Southeast with operating an unfair distribution system that punished dealers who refused to meet Southeast's business demands. Some of the suits claim that practices by Southeast and its JM Family Enterprises Inc. holding company forced the dealers to sell their dealerships or go under.

Five of the suits combined seek damages of more than $375 million. A sixth case, brought by the owners of Toyota of Wilson Inc. in Wilson, N.C., who lost their store, does not specify damages,

Ford cuts Capri output but says end is not near

PEDR DAVIS
Special Correspondent

SYDNEY, Australia — Ford Motor Co., moving to trim a growing stockpile of unsold Mercury Capris, said last week it was slashing output of the two-seat roadster by 60 percent.

The decision will cut Capri output to 60 units a day from 150 by eliminating one shift and 500 jobs at the Melbourne assembly plant.

Ford did not say whether it thought the cuts were permanent, and it stressed that the retrenchment does not reflect on the future of the program.

"An extended export program to the United States has been approved so that Capri can continue to be sold at least for the next few years," the company said in a prepared statement.

Although Ford said it is highly pleased with the roadster's U.S. market acceptance, it said the continuing recession there has "unbalanced" its planned production schedules and dealer stocks, resulting in excessive stockpiles.

Approximately nine out of every 10 Capris built are shipped to the United States, where 20,205 were sold between the car's launch in July 1990 and the end of last month.

When the Capri program was first conceived, however, Ford expected to sell 34,000-35,000 units a year worldwide and about 30,000 in the U.S. market.

The failure to trim output earlier in the face of lower-than-expected demand has generated a 104-day stockpile of unsold cars in the United States, a Ford spokesman said.

"But we're not uncomfortable with that," the spokesman said.

In Australia, the Capri's other primary market, the car is being heavily discounted to combat a widespread reputation for shoddy quality and the normal seasonal downturn in sales during the winter months.

First-half registrations totaled only 635 units, or about 14 percent of last year's total volume of 4,500 units.

The Capri's image has been hurt in Australia by a segment on a nationwide consumer-affairs program, "The Investigators."

The program, which was aired nationally by the Australian Broadcasting Corp., was harshly critical of the quality of locally delivered Capris.

International Editor James R. Crate in Detroit contributed to this report.

14 carmakers find silver lining in July sales despite 4.5% drop

JIM HENRY
Staff Reporter

July sales showed the most widely shared improvement of the year by far, with 14 makes posting increases over July 1990.

Industry sales of 1,166,617 cars and light trucks were 4.5 percent below July 1990. But July's total was the highest monthly tally this year, and the 4.5 percent deficit was much lighter than the 13.4 percent decline for the first seven months of 1991.

In another sign that the U.S. market is improving, cars and trucks sold at an annual rate of 13.5 million units in July, according to *Automotive News*' seasonally adjusted annual sales rate calculations. On a seasonally adjusted basis, U.S. car and truck sales have improved every month since January, when the annual rate was 11.2 million.

Stronger sales meant lower inventories. (Table on Page 38.) Cars fell to a 54-day supply on Aug. 1, down from 60 on July 1. The domestic stockpile fell to 47 days from 54 a month earlier, and

TOKYO — Soichiro Honda, who defied the Japanese government to enter the automobile business, who preferred loud shirts and grease-stained work pants to the ubiquitous Japanese business suit, who dismissed a high school diploma as not worth the price of a movie ticket, was remembered last week as "the last of Japan's great businessmen."

The founder of Honda Motor Co., who died last week at age 84 from liver failure, was recalled in affectionate tributes from political leaders, competitors and employees alike. All saw in his death the end of an era, a time when an individual could still forge an empire from the ore of his own genius.

Prime Minister Toshiki Kaifu praised him as "a self-taught man of great personality."

Eiji Toyoda, chairman of Toyota Motor Corp. and nephew of the founder of the Toyota organization, marvelled at Honda's ability to build his company into a world-class corporation in just one generation.

Toyoda praised his "great curiosity" and "unlimited tenacity," and said: "It was that style of management that I always watched with a sense of awe."

Honda, who had little use for ceremony all of his life, had stipulated that no company funeral be held. He was cremated last Tuesday in a private nonreligious affair attended by about 40 relatives and friends.

In accordance with his wishes, only four representatives from the company he founded attended, although a memorial service will be held at a later date.

AUTOMOTIVE NEWS/JOE WILSSENS

In 1989, Soichiro Honda presented the first Accord assembled in the United States to the Henry Ford Museum in Dearborn, Mich.

He is survived by his wife, Sachi, two daughters and a son.

Born in Hamamatsu in central Japan in 1906, the son of a blacksmith, Honda showed an early fascination with machinery at the local rice mill. He left home at age 15, after eight years of schooling, to become an apprentice at a car repair shop in Tokyo. By 1928, he had set up his own branch of the repair shop back in Hamamatsu, and spent his spare time building racing cars.

He won a trophy at the 1936 All-Japan Speed Rally by setting a record speed of 75 mph, but he never crossed the finish line. A near-fatal accident took him out of the race and ended his career as a race driver.

When he later took to making piston rings, Honda, at the age of 31, decided to become a part-time student at the local technical high school to learn about casting.

He learned, but because of his impatience with textbook strictures and examinations, the school refused to give him a diploma. The principal apologized for the refusal in later years.

Despite his lack of formal training, Kiyoshi Mori, a former head of Honda's research and development department, recalls that the founder possessed "intuition in technology" in abundance.

Mori himself entered the company in 1958 with what he called "[illegible] theories" from college.

"He could be stubborn at times, but if other people had different opinions, he would try both ways." In the end, however, "the results usually corresponded with Honda's intuition."

Honda did not endorse the stereotypical vision of the all-obedient Japanese worker, Mori recalls. "He told people not to work for the corporation, but to work for yourself," Mori said.

Honda himself worked hard and played hard.

His piston company, which supplied tools for aircraft pro-

GM expands Fla. program car resale test

CHARLES M. THOMAS
Staff Reporter

General Motors has expanded its Satisfaction Plus program to include all dealers in Florida. And the next step could be the addition of neighboring states, making it a regional program of selling daily rental buyback vehicles directly to dealers, bypassing auto auctions.

GM, which will run about 800,000 buyback cars through the auctions this year, is developing an electronic communications system so dealers can order buyback vehicles by computer just like new vehicles.

"That's the key to making the whole process viable — making it just like new cars," a company spokesman said.

Under the Satisfaction Plus program, dealers currently order the cars from a shopping list faxed to them by the automaker. That is followed by an invoice, a window sticker with a manufacturer's suggested retail price, and a buyer's guide required by the Federal Trade Commission designating the vehicles as used cars.

Expanding the program statewide involves using more railheads for vehicle delivery and storage so GM can offer dealers better variety. Using railheads as distribution hubs also solves transportation problems for the automaker. Buyback cars hitch rides on car haulers carrying vehicles to dealers.

Though auction owners fear that plans like Satisfaction Plus will hurt a major segment of their business, the GM spokesman said auctions are necessary and will remain a part of the distribution chain for program cars because that's where prices are set.

But services the auctions offer could change. If ordering cars electronically improves, auctions could end up as distribution hubs.

Most auctions have invested hundreds of thousands of dollars in huge fenced and lighted blacktop lots to store buyback vehicles before selling them. And they own fleets of car haulers. By using electronic communication, dealers could order vehicles sitting in an auction parking lot awaiting sale at the auction.

Instead of selling vehicles, auctions would ship them to dealers, the GM spokesman said.

GM started Satisfaction Plus in May in south Florida to aid dealers in merchandising rental returns, and save the automaker transportation and auction fees.

Chrysler Corp. has a similar test program in south Florida that requires dealers to shop the lot where the vehicles are stored. The advantage to this system is that dealers actually view the cars being sold. Chrysler will distribute about 240,000 program vehicles in 1991.

The volume of program cars industrywide has swelled to 1.5 million vehicles this year. Program cars are vehicles sold to daily rental companies then repurchased by manufacturers at a depreciated rate and remarketed to dealers through the auction network.

Satisfaction Plus is still a pilot program and its expansion is only a further test by GM to see what problems are generated by operating it statewide. Though some industry sources say only a few hundred cars have been sold under the program, the GM spokesman said the number is closer to 1,100.

He said the program has been enthusiastically received by dealers, especially those who are skittish about attending auto auctions.

Auto trade deficit dips 23% for quarter

The U.S. automotive trade deficit in the first quarter of 1991 was 22.9 percent lower than in the fourth quarter of 1990. The first-quarter deficit was $9.7 billion, down from $12.6 billion the previous quarter.

The improvement was spurred by a 27.4 percent increase in the value of U.S. exports, according to U.S. Commerce Department statistics.

And that rise stemmed from a $742.3 million increase in car and truck exports to Canada.

While exports were increasing, the value of new-vehicle imports to the United States dropped 15.1 percent, to $12.7 billion.

Shipments decreased from Germany, Sweden, Italy, France and the United Kingdom — reflecting the decline in sales among European importers here. The value of imports from Mexico and South Korea also dropped.

The first-quarter trend reversed the pattern of automotive trade in the 12-month period that ended March 31.

The U.S. automotive trade deficit was $42.6 billion from April 1990 through March 1991, up 3.9 percent from the total for the previous 12 months.

The first-quarter figures showed a narrowing of the automotive trade gap with Japan as trade tensions between the two countries mounted.

The quarterly deficit was $5.9 billion, down from $6.1 billion in the fourth quarter of 1990.

The value of shipments from Japan to the United States, which is about 40 times higher than the flow going the other way, was off 4.1 percent for the quarter. Exports from the United States to Japan dropped 17.5 percent. Despite those percentage discrepancies, the U.S. deficit declined because of the preponderance of Japan-to-U.S. shipments.

Bills target imported minivans, sport-utilities for 25% tariff

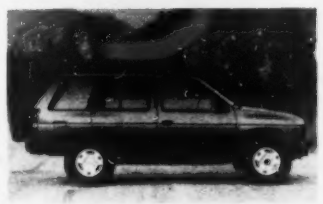
JIM HENRY
Staff Reporter

A Michigan congressman and a New York senator have introduced bills that would subject all imported sport-utilities and minivans to a 25 percent tariff.

The measures, sponsored by Democratic Rep. Dale Kildee and Republican Sen. Alfonse D'Amato, would reclassify some of those vehicles as imported trucks, which are subject to the 25 percent duty.

In early 1989, the U.S. Customs Service threatened to reclassify some imported multipurpose vehicles as trucks. Importers protested, and the Treasury Department ruled that four-door sport-utilities and minivans with side windows and rear seats would continue to be classified as passenger cars, subject to only a 2.5 percent tariff. Two-door sport-utilities had to pay the higher rate.

In introducing his bill Aug. 2, Kildee complained that different federal agencies define the same vehicle differently, and the resulting loopholes offer importers a competitive advantage against domestic manufacturers.



The U.S. government continues to classify four-door sport-utilities such as this Pathfinder as cars subject to a 2.5 percent duty.

While Customs considers most multipurpose vehicles to be passenger cars for tariff purposes, the EPA and the Department of Transportation consider them trucks for emissions and safety standards.

Kildee used the Range Rover and the Nissan Pathfinder as examples. The Range Rover meets truck safety and emissions standards and, as a truck, it escapes the luxury tax on cars over $30,000. But because it has four doors, it pays the 2.5 percent passenger-car tariff.

The Pathfinder is classified as a car or a truck depending on the number of doors.

BMW buys stake in U.S. studio

In an effort to give its cars more American flavor, BMW AG has bought 50 percent of Designworks/USA, a California design consulting firm, for $4.5 million.

"We will utilize Designworks' expertise to create international products with an American flair," said Wolfgang Reitzle, BMW's board of management member responsible for research and development. Designworks has worked on BMW projects for seven years.

The automaker is buying "added American input" for BMWs that will be sold in all markets, said Charles W. Pelly, Designworks president. "Time will tell" if BMW ever decides to import cars designed exclusively for the U.S. market, he said.

BMW bought most of its share of Designworks from Magna International Inc. The Ontario-based parts maker owned 40 percent of the firm.

Lexus tops for sales satisfaction

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Lexus has another feather for its cap. The luxury division of Toyota Motor Sales U.S.A. Inc. took the top spot in the 1991 sales satisfaction index from J.D. Power and Associates Inc.

Lexus increased its score to 146, up 10 points from a year earlier. The title adds to a stream of high rankings for Lexus. The two-year-old division also finished on top of J.D. Power's 1991 study on initial quality, and it tied for first in the 1991 Customer Satisfaction Index.

Mercedes-Benz, which had been in the top spot for four years, dropped 13 points to fifth place.

Cadillac moved up two points to 140, which was enough to regain the No. 2 spot it held in 1988 and 1989. Third-place Infiniti fell five points, while fourth-place Lincoln improved six points.

General Motors' Saturn division made an impressive debut in the rankings, finishing sixth, one point behind Mercedes-Benz. The results appear to indicate that customers are embracing Saturn's low-pressure, stick-to-sticker sales approach. Saturn tied Buick at 131.

J.D. Power determines its sales satisfaction rankings by surveying consumers about the sales experience, delivery experience and product condition.

Further down in the rankings, Honda and Porsche returned to above-average levels after disappearing from the rankings last year. J.D. Power does not release below-average scores. Honda's sister division, Acura, failed to make the above-average list for the third straight year.

While the car sales satisfaction ranking was evenly split between import and domestic nameplates, the above-average players in the truck survey were all domestic.

Ford took the top honors for the second straight year, increasing its score nine points to 112. Oldsmobile, which sell Silhouette, was right on Ford's tail, rising 11 points to 111.

Last year, sixth-place Toyota was the only importer to make the list; in 1989, Mazda and Toyota made the cut.

Japan's new car sales decline 2.9% in July

MARY ANN MASKERY
Staff Reporter

TOKYO — Japanese new-vehicle sales slipped 2.9 percent in July, the sixth monthly decline of the year, although the luxury segment above 2 liters again registered a double-digit increase.

Analysts attributed the fall in demand, to 574,026 units, partly to new parking regulations that went into effect in July.

The regulations require a would-be car buyer to present proof of parking in order to register the vehicle.

According to figures released by the Japan Automobile Dealers Association, sales of vehicles between 660 cc and 2 liters — Japan's dominant market segment — fell 13.3 percent last month to 340,766, the 11th straight month of decline.

But sales of luxury cars, fueled by continuing strong demand for such new domestic models as the Mitsubishi Diamante, surged 67 percent, to 69,653.

The July increase was the seventh consecutive monthly gain in that segment.

However, despite strong percentage gains by Volkswagen, General Motors and Chrysler, import sales slipped 3.9 percent last month, to 19,518.

Imports, most of which are in the luxury segment, have trailed their year-earlier sales for seven consecutive months.

Among German makes, which dominate the import segment, BMW fell 5.1 percent, to 3,0[illegible], and Mercedes-Benz was down 13.3 percent, to 3,389. Combined Volkswagen/Audi sales rose 12.6 percent, to 4,452.

General Motors sales rose 21.3 percent in July, to 766 units, while Chrysler reported a 7.7 percent increase, to 117. But Ford Motor Co. sales fell 42 percent, to 564.

Toyota Motor Corp. said its July volume fell 5.3 percent, to 232,898, despite a full model change for the Corolla, the best-selling car in Japan. Although Corolla sales were down 7.1 percent, to 27,015 in July, Toyota insisted it is meeting its sales target.

Mitsubishi Motors Corp., which has been showing double-digit growth all year, reported a more modest 5.1 percent increase in July, to 46,071 units.

But Fuji Heavy Industries, maker of Subaru, said sales of its cars over 660 cc jumped 23.1 percent, to 12,486. Much of the gain was attributed to demand for the Legacy.

Sales of mini-vehicles, under 660 cc, were down 8.4 percent, to 160,237 units, according to the National Minicar Association. All companies in the segment showed a sales decline in July.

Despite the long string of down months, most carmakers still expect an overall boost in market demand, led by new entries in the fall.

Rover quits London show; more defections seen

ED WENDT
and VAUGHN FREEMAN
Correspondents

LONDON — In a move that appears to cast a long shadow over the future of the London auto show, Rover Group, Britain's only British-owned volume carmaker, said last week that it has decided to pull out of the biennial event.

The company, Britain's third largest vehicle maker after Ford and Vauxhall, follows five other manufacturers and importers that have canceled plans to exhibit at this year's Motorfair. They are BMW, Porsche, Nissan, Lada and Proton.

Rover attributed its decision to a desire to cut costs in a down market and to scheduling conflicts.

"In the current climate, we feel it is better to concentrate our resources toward other market activities rather than Motorfair," a Rover spokesman said.

"We felt it would be better to invest in other directions, such as dealer promotions."

Rover's reasons for quitting the event were closely echoed by Porsche officials.

"The timing of the show is inconvenient for our range of new products, both announced and unannounced," a spokesman for Porsche Cars Great Britain said last week.

The show, which is held in off years to the British International Motor Show in Birmingham, is scheduled this year for Oct. 17-27. In that time slot, it conflicts directly with the Tokyo motor show and follows by only a few weeks the important Frankfurt auto show in September.

Other defections are expected, according to sources close to the organizers.

But spokesmen for Ford and Vauxhall said they have no plans to quit the show, and a Volkswagen official said the German automaker "definitely" intends to have a major display at the exhibition.

Other vehicle makers that have scheduled space at the show include Japan's Toyota, Mazda, Honda and Suzuki; Peugeot and Renault of France; Sweden's Volvo, and Hyundai of South Korea.

"Manufacturers withdrawing clearly is not the end of the world for the show, but it may well be giving the wrong signal to car buyers," said David Gent, director-general of the Retail Motor Industry Federation, the British dealer trade group.

The last Motorfair, in 1989, attracted 372,000 visitors. In contrast, last year's Birmingham show brought in 450,000.

How many of these people do yo

For safety's sake, we hope none. The eyes should be watching the road. The ears, on the other hand, are listening to the radio. Which is why your ad should be on the radio. And when you consider that people spend three hours a day listening

Automakers keep an eye on strike replacement legislation

LIZ PINTO
Staff Reporter

Vehicle manufacturers are not taking a public stand on a federal bill that would prohibit employers from permanently replacing unionized workers who strike.

There's a simple reason: Automakers point out that they don't permanently replace striking workers.

The U.S. House of Representatives passed H.R. 5 on July 17. The bill could come before the Senate this fall.

"We are watching H.R. 5 with interest," said Dick Routh, a spokesman for Ford Motor Co. "But as a policy, we do not hire permanent replacements."

A General Motors spokesman said, "It is policy not to replace strikers. We are more interested in settling issues in question during a strike and getting employees back to work."

But if the bill becomes law, automakers would be affected.

As federal labor laws now stand, workers cannot be fired for striking, but they can be permanently replaced. Until the 1980s, such replacement was virtually non-existent.

The right of employers to permanently replace employees on economic strikes comes from the 1938 Mackay doctrine, which puts striking employees into two categories — unfair-labor-practice strikers and economic strikers. The doctrine allows replacement of economic strikers but not of unfair-labor-practice strikers.

Although automakers have not used the doctrine, there is evidence that in the last decade automotive suppliers and many other smaller businesses have used it to get rid of their unionized work forces.

In 1981, President Reagan fired 12,000 striking air traffic controllers for breaking federal law by striking. Proponents of H.R. 5 say that action had a dramatic impact on the way Americans view strikes, and they claim it sent a signal to employers that it was acceptable to dismiss striking workers.

A House committee report that was essential in the passing of H.R. 5 says, "Evidence is clear that tens of thousands of employees are being permanently replaced each year for exercising a basic protected right, and that hundreds of thousands more have been threatened with permanent replacement."

Arvin Automotive Industries in Columbus, Ind., a supplier of exhaust systems, permanently replaced its workers in an economic strike. John Hall, a former employee of the company, testified to a House committee that many replaced workers lost their homes and that families split up because of the financial and emotional strain brought about by the action.

Opponents of the bill say that if H.R. 5 becomes law, strikes will become longer and more frequent and could cause businesses to close. If that happens among suppliers, assembly plants ultimately would have to shut down.

The National Automobile Dealers Association says that although 11 percent of dealership employees are unionized, it is more concerned with that ripple effect than with the direct effect of the bill.

"We are concerned about suppliers and vendors to the manufacturers, as well as getting the cars from the manufacturer to the dealership," an NADA spokesperson said. "We feel passage of this bill would increase labor unrest. If jobs are guaranteed, there is not the same amount of incentive to come to an agreement."

The UAW has said that getting this bill passed by the Senate is its main priority.

New Pontiac ads focus on driver control

RAYMOND SERAFIN
Crain News Service

Lifestyle fluff is out at Pontiac.

For the sober 1990s, Pontiac is dropping images of people having fun in favor of product messages about driver control.

Pontiac's new style started with advertising for its new 1992 Bonneville on network TV and in *U.S. News & World Report*. Three 30-second TV spots focus on such attributes as anti-lock brakes, a driver-side air bag, powerful engines, traction control and advanced suspensions, a far cry from the MTV-like ads that marked Pontiac advertising during the late 1980s.

Pontiac began to edge away from that direction in the 1991 model year with a humorous campaign positioning its cars as an antidote to social scientists' predictions that the new decade would be "dullsville." But for the first half of this calendar year, Pontiac's car sales were off 21.5 percent, to 263,114, compared with the previous year; its share of the car market fell to 6.4 percent from 6.9 percent.

The division is shifting gears without dropping its "We build excitement" themeline, which is entering its 11th year.

"Pontiac stands for something, and that's worth a lot in a market where some are still casting about for what they stand for," said Mark Gjovik, executive vice president and group account director at Pontiac agency D'Arcy Masius Benton & Bowles in Bloomfield Hills, Mich. "But like any position that is long-term and enduring, it has to evolve.

"The Reagan era is definitely gone," Gjovik said, "The change from the '80s to the '90s was as significant a decade shift as you can find."

For instance, consumer concern about safety has been "a very sudden development," he said.

Pontiac is trying to meet that concern by stressing how the features of its cars help a driver stay in control of any situation.

The division wants to maintain its sporty image, but it is no longer enough to just present the image without explaining the underlying value, Gjovik said.

"The most important safety feature in any car is a driver in control," says the voice-over in one of the spots.

An introductory Bonneville shot shows a cover being blown off to reveal the car, but most of the visuals in that commercial and the other two feature shots on the road or on test tracks.

Head injuries 'possible' for drivers in small Toyotas

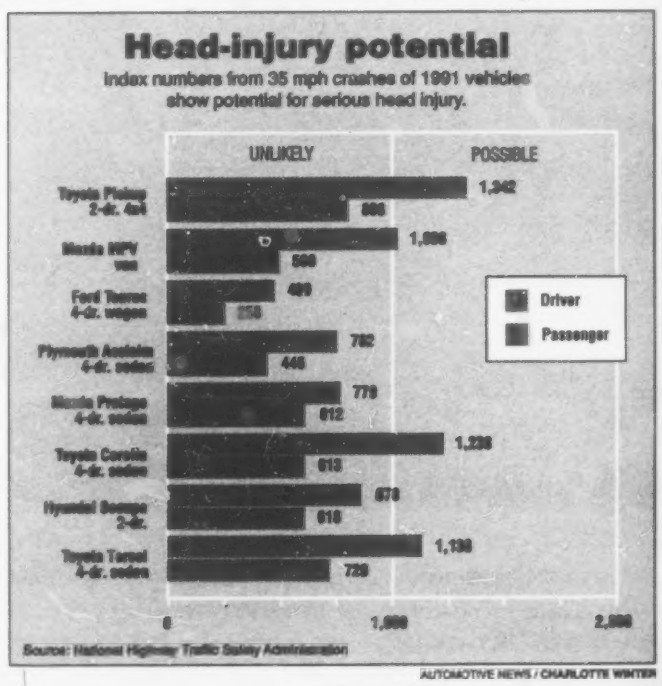
WASHINGTON — The government's latest round of 35-mph crashes indicates serious head injuries are "possible" for drivers of the Toyota Tercel and Toyota Corolla.

The two subcompacts are the only nameplates among 13 cars under 2,500 pounds to score above the 1,000 threshold, according to the National Highway Traffic Safety Administration. Scores below 1,000 indicate that injury is "unlikely." The agency says comparisons should be made only among vehicles in the same weight groups.

The Mazda MPV and Toyota 4x4 pickup also exceeded the 1,000 threshold for drivers. Scores tend to be higher for those types of vehicles. Seven of eight vans in NHTSA's bank of statistics have exceeded the 1,000 mark, as have seven of 11 pickups.

Meanwhile, the Ford Taurus wagon posted a 258 head-injury score for the front-seat passenger. It was the lowest passenger score among nine in NHTSA's list of cars weighing 3000 to 3,499 pounds.

The eight vehicles included in the latest scores are part of a group of 34 involved in the program for the 1991 model year. NHTSA's statistics also include projected scores for models that were crashed in previous years and have not been redesigned since.



AUTOMOTIVE NEWS / CHARLOTTE WINTER

NHTSA bills the tests as a "consumer information" program. Vehicles are crashed at 35 mph into a fixed barrier; the crash dummies are belted.

Vehicles must pass a 30-mph test to comply with federal safety standards.

SALES

FROM PAGE 3

imports dropped to 75 days from 80.

The dip in car inventory numbers was even more impressive — 1,627,463 domestic and imported autos in stock on Aug. 1, down from 1,844,493 on July 1. Production cutbacks for model changeovers contributed to the reduction.

The *Automotive News* inventory report now includes light trucks. On Aug. 1, the stockpile was 930,038 units, a 61-day supply. On July 1, it was 995,432, a 67-day supply.

Actual July car sales slipped 3.8 percent from last year, to 773,377; light trucks were off 6.0 percent, to 393,240.

Sales for General Motors, Chrysler Corp. and Ford Motor Co. all trailed last year's figures. Collectively, they were down 7.3 percent.

Japanese makes were up 6.4 percent for the month, with Toyota Motor Sales U.S.A. Inc. and Nissan Motor Corp. in U.S.A. posting substantial gains. Through July, the Japanese were down 5.9 percent.

The Big 3 lost 2.1 points of market share in July. Their share was 70.3 percent for the month. Japanese brands picked up 2.7 percentage points, good for a 26.1 percent market share.

July was the first time this year that Toyota (up 16.9 percent), Nissan (16.6 percent), Oldsmobile (9.6 percent), Hyundai (6.4 percent), BMW (3.2 percent) and Sterling (80.6 percent) posted higher sales than in the year-ago month. It was alast hurrah for Sterling Motor Cars; it is withdrawing from the U.S. market at the end of the 1991 model year.

Other makes that posted higher July sales were Buick (9.0 percent), Mitsubishi (36.7 percent), Acura (1.9 percent), Subaru (4.0 percent), Isuzu (36.4 percent), Suzuki (25.9 percent), Lexus (17.0 percent) and Infiniti (158.2 percent).

Infiniti's 5,441 sales were a monthly record. The number was 1,109 behind Lexus, the closest Infiniti ever has been to its rival.

While the industry's sales numbers continue to grow, stagnant consumer confidence continues to act as a brake on any faster improvement for the economy as a whole, according to a Conference Board survey.

Only 6.1 percent of consumers polled in July said they plan to buy a car in the next six months, compared to 8.8 percent in July 1990, before the Gulf war, the board said.

The survey pegged the Consumer Confidence Index at 77.7, compared to 78.0 in June and 101.7 in July 1990. The index uses 1985 attitudes as a baseline of 100.

Spielman elected GM vice president

DETROIT — Joseph D. Spielman was elected a vice president of General Motors and named general manager of the rear-wheel-drive product team at the Chevrolet-Pontiac-Canada Group last week.

Spielman replaces David D. Campbell, 61, who announced his retirement after 43 years with GM. The move is effective Sept. 1.

Spielman, 46, joined GM in 1963 at the Fisher Body No. 1 plant in Flint, Mich., while he was still a student. He was assigned to C-P-C headquarters as director of manufacturing engineering in 1984, and was named group manufacturing manager, his current post, in 1988.

STERLING

FROM PAGE 1

Braman Enterprises in 1987.

Entrepreneur Norman Braman, who recruited many of his fellow Cadillac dealers to sell Sterling, launched Austin Rover Cars of North America during the peak of the European luxury car boom in the United States. Sterling sales reached 14,171 in 1987 but fell every year through 1990, when 4,015 were sold. Through July of this year, Sterling sales were 1,878, down 28.0 percent from 1990.

Auto analyst Karl Ludvigsen of Ludvigsen and Associates in London said the decision on Sterling was "sensible" in light of "the dramatic and complicated challenges of the European market in the next century. They have the Japanese to contend with. They intend to concentrate on Europe."

The Sterling car itself was based on the Acura Legend and born out of a joint venture in England between the Rover Group and Honda Motor Co. Honda replaced the Legend last fall, but Rover wasn't involved. Sterling had planned to introduce a revamped version of its five-year-old car in the 1992 model year. A convertible was expected to follow.

Industry analysts in England believe that the impending launch played a role in Rover's decision to quit the United States now. The European version, sold as the Rover 800, will go on sale in November.

"They had to weigh costs of marketing the new car (along with) staying in the market and building the image of the marque," said Peter Caldwell of Barclays de Zoete Wedd. "Presumably, they are not making any money with the present Sterling and, with the additional costs inevitable in a new launch, decided to cut now."

Sterling's quality was spotty initially, including the electrical problems British cars have been notorious for. Another time, the company was horrified to find that a batch of leather interiors was turning green in the tropical Miami sun.

Rover bought out Braman Enterprises in 1988 and renamed the company in 1989. Customer and dealer satisfaction improved, but the company never really recovered from its early quality problems and its fuzzy image.

A Rover Group spokesman said the company has no plans to sell cars again in the United States.

Sterling has 117 U.S. employees. About 10 percent will be laid off immediately, but the rest — including President Graham J. Morris — will stay in place for the time being while the company restructures itself into a parts-and-service-only subsidiary, said Sterling spokesman Michael Geylin.

Range Rover of North America and the Sterling parts and service subsidiary will be part of a new umbrella company, to be called Rover Group USA. Range Rover will continue to be separate from Sterling. Before last week's announcement, it had been long rumored for Rover Group would some day merge Sterling Motor Cars and Range Rover of North America.

Analyst Ludvigsen said it made sense for Rover to keep its Range Rover sport-utility operations in the United States, where the company has carved out a small but solid niche. "The U.S. is a good market for Range Rover, and Rover knows it," he said.

Sterling's 124 dealers have about 1,000 cars left in inventory, and the company has none, Geylin said.

Greg Ehlers, owner of Ehlers Sterling in Los Angeles and chairman of the Sterling dealer council, said Sterling followed the bad news with a long list of actions to soften the blow, like a 5 percent hike in warranty reimbursements and a promise to pay dealers 100 percent for parts, tools and signs if they decide to drop the franchise. Peugeot's dealers were in the dark on such matters last week.

Correspondents Ed Wendt and Vaughn Freeman in London contributed to this report.

Pontiac ups Bonneville rebate to $2,500

ARLENA SAWYERS
Staff Reporter

Eager to make way for its redesigned 1992 Bonneville, Pontiac added $1,000 to the customer incentive on the 1991 model.

Nissan Motor Corp. in U.S.A. became the first manufacturer to announce an incentive that extends into the 1992 calendar year, and Toyota Motor Sales U.S.A. Inc. and Mazda Motor of America Inc. added new programs.

Pontiac is paying a consumer rebate of $2,500 on its 1991 Bonneville, up from the $1,500 it announced July 8.

Toyota is including some 1989 cars and trucks in its dealer rebates. Until Sept. 3, Toyota is paying dealers $700 to $900 on 1989, 1990 and 1991 Camrys and Corollas and $500 to $1,200 on 1989, 1990 and 1991 trucks. Payments are based on the dealer's performance against quota.

Through Oct. 2, 1991, **Nissan** is offering dealers $2,500 to $4,000 on the 1991 300ZX, based on performance against quota.

After Oct. 2, the payments on the 300ZX will be $2,500 to $3,500 until Feb. 2, 1992.

Also through Oct. 2, Nissan dealers earn $400 on sales of the 1991 Sentra. On the 1991 Stanza, Maxima and 240SX dealers receive $600 to $1,800 plus a bonus of $300 per sale when they reach 100 percent of their quotas.

California dealers earn a flat payment of $1,500 on sales of 1991 Nissan trucks. All other dealers receive $1,200 on 1991 Nissan trucks and $1,000 on Pathfinder plus a bonus of $200 and $400 for meeting their quotas.

Bonus payments on cars (except 300ZX) and trucks are retroactive to the first sale.

Mazda offers customers $800 on the 1991 Protege and $1,000 on the 1991 626 or 5.9 percent financing for up to 36 months.

Also, Mazda is paying dealers $500 for sales of the 1991 MX-6 and $2,000 for sales of the 1991 RX-7 and 929. The dealer incentive is $500 on the MPV and $750 on the Navajo.

Special Correspondent Darrell Pressley contributed to this report.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

MAZDA (1991 models; expires Sept. 4 on 626, Oct. 2 on Protege; 5.9 percent loans offered in lieu of rebates)

GM plans joint venture in Nigeria

ROBIN-LYN RAIMEY
Special Correspondent

General Motors has agreed to set up a joint-venture company with UAC of Nigeria PLC, a Lagos-based truckmaker, to assemble and distribute commercial vehicles in Nigeria.

GM said it plans to buy into an existing assembly plant in order to form a new company, GM Nigeria Ltd. GM will hold 30 percent of the new company, UAC will have 60 percent and the employees, 10 percent. The company currently services the domestic market, but intends to export to other countries.

"This agreement will expand GM's presence in West Africa and act as a catalyst for increased business opportunities in the future," Greg DeYonker, executive director of GM's African Operations, said in a prepared statement. He expects GM to complete the deal in the next month.

Production is estimated at 1,500 units for the 1991 calendar year, with a gradual increase to an expected capacity of 8,000.

The value of the agreement has not been disclosed.

Initial production will include a range of light commercial vehicles and heavy trucks and buses, with expansion to passenger vehicles as soon as possible.

"I am very optimistic about passenger cars," DeYonker said in an interview. "I see a reasonable potential to get up to capacity."

The plant currently assembles complete knockdown kits, the majority supplied by Isuzu in Japan. A smaller number of heavy truck kits come from AWD of the United Kingdom and GM do Brazil.

GM's North American vehicles will be considered for future production, DeYonker said.

GM Nigeria Ltd. will be based just outside of Lagos, Nigeria, in the port city of Apapa. Lagos-headquartered UAC, one of the largest and most successful companies in Nigeria's private sector, currently has 25 dealer locations.

GM's relationship with UAC dates to 1952 when UAC assembled Bedford-designed heavy-duty trucks for sale in Nigeria.

July output falls 3.9% below 1990

BOB DeMAYER
Special Correspondent

U.S. car production for July was 353,394, down 3.9 percent from July 1990. Because of heavy downtime for changeovers, last month's total was down 26.2 percent from June 1991.

U.S. truck production for July was 232,332, down 11.4 percent from July 1990. Last month's total was down 28.8 percent from the previous month.

Automakers scheduled 91,187 cars last week, up 18.4 percent from the preceding week but down 23.4 percent from 1990.

Truckmakers planned to build 52,712 units last week, up 21.7 percent from the prior week but down 22.2 percent from the year-ago week.

General Motors scheduled two shifts of overtime last Saturday at its Flint, Mich., (Buick City) car plant.

Chrysler Corp.'s St. Louis (No. 2) truck plant worked two shifts of Saturday overtime.

Honda of America Manufacturing Inc.'s Marysville, Ohio, car plant worked one shift of Saturday overtime.

Mazda Motor Manufacturing (USA) Corp. said its output did not suffer despite its loss of six shifts of production when a major stamping press failed.

In order to keep production at the normal level, Mazda sourced out some of the parts produced by the press and scheduled daily and Saturday overtime last week.

The stamping press went down Aug. 2 during a die tryout for the 1992 model changeover. The plant lost one production shift on Aug. 2, two shifts on Aug. 5 and 6 and on on Aug. 7.

CANADA: Canadian car production last month was 64,514, down 12.2 percent from July 1990. Last month's total was down 42.1 percent from the previous month.

Canadian truck production last month was 46,095, up 22.1 percent from the year-ago month. It was the highest July truck production in Canada since 1986 when 48,662 were produced. Last month's total was down 43.8 percent from June 1991.

Canadian car production was estimated at 16,226 last week, up 98.4 percent from the prior week and up 31.8 percent from the same week last year.

So far this year, 647,877 cars have been assembled, 1.7 percent more than last year at this time.

Truck production last week was estimated at 13,845, up 40.9 percent from the prior week and was 2½ times as high as that of the year-ago week.

Ford Motor Co. scheduled one shift of daily overtime this week at its St. Thomas, Ontario, car plant.

20% mpg increase is possible, says aluminum industry

IRVINE, Calif. — Aluminum industry experts told the National Academy of Sciences Committee on Fuel Economy of Automobiles and Light Trucks that increased used of aluminum in vehicles would increase economy without sacrificing safety or size.

The aluminum industry report was based on using all of the current automotive applications of aluminum in a mid-sized American four-door sedan.

The industry stated the vehicle would weigh approximately 25 percent less than a conventional sedan. Calculations in the report estimated a 20 percent increase in fuel economy.

Nissan line gets boss with 'the Infiniti touch'

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — From the start, Nissan Motor Corp. in U.S.A. has used its Infiniti Division as a test lab for handling customers, training salespersons and polishing its image. Now, by tapping Infiniti's No. 2 executive to head the Nissan Division, the company hopes to transfer some of those lessons to its volume franchise.

Infiniti's general sales manager, Earl Hesterberg, 37, will become a corporate vice president and general manager of the Nissan Division Oct. 1. He will replace Robert J. Thomas, 46, who has headed Nissan for three difficult years. Thomas will become vice president of corporate strategy and resource development, a newly established position.

The move comes as Nissan tries to break out of a prolonged sales slump. Car and truck sales fell from nearly 700,000 in 1987 to 591,145 last year. The slide has made Nissan an industry enigma because it has coincided with the introduction of widely acclaimed products, such as the Maxima and 300ZX.

But Nissan acknowledges that it is hobbled by an outdated operating structure and has been trying to overhaul the way it does business. Hesterberg will try to return Nissan to its prior sales levels while carrying out a reorganization begun under Thomas.

Thomas: three difficult years

Hesterberg: starts Oct. 1

Hesterberg admits he has a task before him.

"Certainly it's a lot easier to start a new division from scratch than to grapple with one that is 20 years old," he said.

"We've been able to be focused on the long term at Infiniti from the beginning. Nissan always has to be concerned with staying competitive in the short term. Hopefully, we'll begin to be able to balance those two, with more emphasis on the long term."

When he gets to Nissan Division,

Toyota has lost six dealers since Jan. 1, but the overall number of Japanese dealerships held steady.

Dealership total dips by 328 despite first-half import gain

JOHN K. TEAHEN JR.
Senior Editor

Take equal parts of war, recession and awful sales.

Mix in a cup of red ink, a pinch of tight credit and a dash of overworked incentives.

Simmer over a low flame for six months, and the unappetizing result is dealer attrition.

All those ingredients contributed to a sharp decline in the number of new-car dealerships in the first half of 1991. The mid-year *Automotive News* census found 23,944 outlets in operation in the United States on July 1, down 328 from 24,272 on Jan. 1.

The Big 3 accounted for the entire loss, and then some. The domestic count slipped by 345, to 18,639, during the first half. Conversely, the number of import-only dealerships rose by 17, to 5,305.

CAR DEALERSHIPS IN UNITED STATES

	July 1, 1991	Jan. 1, 1991*
Chrysler Corp.	5,030	5,175
Ford Motor Co.	5,206	5,296
General Motors	8,923	9,048
Totals	19,159	19,519
Minus intercorporate duals	520	535
Net Big 3	**18,639**	**18,984**
Import exclusives	4,184	4,138
Import-only duals	1,121	1,150
Total new-car dealerships	**23,944**	**24,272**

*Revised
Copyright 1991, Automotive News

Chrysler Corp. lost 145 car dealerships during the first half. General Motors was down 125, and Ford Motor Co. was off 90. A change in the number of intercorporate duals (outlets that handle the products of two or all of the Big 3) reduced the net dip to 345.

Each of the Big 3 has dealerships that handle only trucks — 22 for Chrysler, 105 for Ford and 415 for GM. They are not included in this tabulation.

The import dealership increase resulted from a rise of 46 exclusives (outlets that handle a single import make and nothing else) and a decline of 29 in the number of

Ford expects 1,000 sales from four Soviet dealers

KATHY JACKSON
Staff Reporter

Ford Motor Co. expects to sell about 1,000 cars and trucks in the Soviet Union this year through four dealerships.

The first one opened in the Ukraine in May. A second store is scheduled to open in Estonia by November, and service centers will open in Leningrad and Moscow later this year. The service centers will sell and service vehicles; the dealerships do not have service facilities.

Ford is the only U.S. automaker with a full-line dealership in the communist country, but Chrysler Corp. is considering the move. Chrysler spokeswoman Karen Stewart says the No. 3 carmaker is negotiating with the Russians about selling its vehicles there, but

Quality and customer satisfaction have been the linchpins of Bob Stempel's game plan for a rebound at General Motors.

Stempel: GM's Stealth chairman

Top exec keeps low profile in first year; team gets the glory

PAUL FRAME
Staff Reporter

A year after the change at the top at General Motors, the question inevitably arises:

Whatever happened to Bob Stempel?

No, wait. It was Roger Smith who retired. And Stempel moved from president to chairman.

In contrast to Smith, Stempel's leadership style has been to maintain a low personal profile and encourage high visibility for his team.

The GM chairman still has incredible power and isn't afraid to use it. And when he uses it, he's effective, but hard to detect.

Call Robert C. Stempel the Stealth chairman.

After seeing Stempel in action for more than a year, auto industry analysts are convinced the GM team, as Stempel calls it, can be a big winner in the 1990s.

Because of Stempel's dogged focus on customer satisfaction and quality, his willingness to listen, devotion to teamwork, and the intense loyalty he evokes from employees, analysts think the rebuilding at GM will take.

"I think GM North American could resemble GM Europe," predicts Philip K. Fricke, analyst with

Dealers sell more used cars than new

CHARLES M. THOMAS
Staff Reporter

For the first time since World War II, used vehicles are outselling new vehicles at the nation's franchised dealerships.

In 1990, dealers sold 14.3 million used vehicles and 13.9 million new ones, said the National Automobile Dealers Association.

Of the used vehicles, 8.9 million were retailed and 5.4 million were wholesaled, chiefly to independent used-car dealers.

In 1989, dealers sold 14.7 million used vehicles and 14.8 million new vehicles, NADA said.

The affordability of used cars, higher prices and weak sales of new cars, and the introduction of nearly new program cars into the marketplace have helped used-car sales overtake new-car sales.

"New-car affordability is definitely a problem, but so are program cars," said Tom Webb, NADA chief economist.

The last time new-car dealers sold more used cars than new ones was during and shortly after World War II, when manufacturers made only military vehicles.

Of the used cars sold at retail, franchised dealerships obtained 69 percent from customer trade-ins and a record 24 percent, up from 20 percent in 1989, from auto auctions.

Increased auction purchases were the result of daily rental company buybacks, known as program cars. Automakers sell those vehicles to daily rental companies, then repurchase them at a depreciated rate and sell them to new-car dealers at auto auctions.

In 1990, the used-vehicle department accounted for 23.9 percent of the average dealership's total dollar sales and 21 percent of total profits. New-vehicle sales accounted for 60.8 percent of the average dealership's revenue but operated in the red, NADA said.

Frank R. Anderson Jr., NADA president and owner of Sir Walter Chevrolet-Geo in Raleigh, N.C., said his dealership sells slightly more used cars than new cars. He expects the used-car trend to continue as new-car prices escalate.

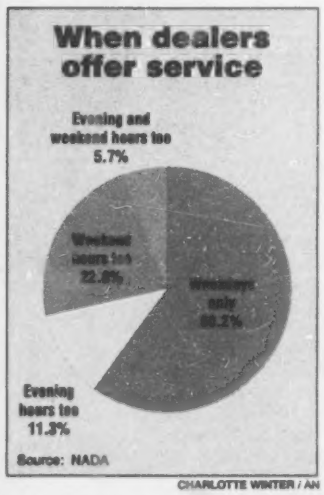
He said program cars make up less than 10 percent of the used cars sold by dealers.

"There is a tremendous advantage to selling used cars — they are less costly for the consumer, and there is a broader market for them," said Anderson.

His dealership concentrates on sales of used cars not only because of the broader market, but because used cars allow a wider mix of vehicles. Anderson is a Chevrolet-Geo dealer, but his used-car operation sells Fords, Chryslers and imports, too.

Moreover, used car sales are not as subject to competitive pressure.

"Selling new against new is competitive," because most brands are similar in appearance and offer roughly the same option packages for about the same price, said Anderson, "but each used car is sold on its own merit."



CHARLOTTE WINTER / AN

Service, parts keep profit up

CHARLES M. THOMAS
Staff Reporter

The average dealership's new-car operation lost money in 1990 as dealers relied on parts and service and used-car sales to bolster sagging revenues, according to a survey of dealers by the National Automobile Dealers Association.

By curtailing expenses and increasing service and parts profits, dealers maintained net profit of 1 percent before taxes in 1990, the same as in 1989. Total sales dipped to $308 billion from $309.7 billion.

Multiple dealership operations are now the rule. More than half of all dealerships are currently part of chains of two or more stores.

Dealerships had record sales of $47.2 billion in parts and service last year, accounting for 15.3 percent of total dealership revenue, up from 12.9 percent in 1985.

Used vehicles accounted for 23.9 percent of total dollar sales in 1990, up from 19.6 percent in 1985. New-vehicle sales dipped to 60.8 percent of total revenue from 67.5 percent in 1985.

Combined profits on used cars and parts and service offset the losses in the new-car department.

Parts and service accounted for 86 percent of total profits last year, and used cars contributed 21 percent. New-car operations resulted in a loss of 7 percent.

THE AMERICAN WAY

Rising star at Nissan takes home habit of "on-off" thinking

MARY ANN MASKERY
Staff Reporter

TOKYO — When Yoshikazu Hanawa returned home earlier this year after nearly seven years in the United States, he brought back a taste for country music, an affection for Southerners and a burning determination to foster understanding between Americans and Japanese.

He also, he says, brought home the unsettling American ability of being able to quickly and firmly say "Yes" or "No."

"The American way of thinking is either on or off," observed Hanawa, the former president of Nissan North America Inc., in a recent interview.

"Ask a question, it's yes or no. But a Japanese answer has variations. So that means, we do not make ourselves clear, even in our own minds."

Hanawa, who was named one of four Nissan Motor Co. executive vice presidents in June, says he learned to appreciate the American propensity for giving — and getting — straight answers.

Where Japanese vagueness fosters flexibility and negotiation, he says, the American penchant for a "straight-forward direct way of living" encourages resolution. But it can also foster inflexibility and a reluctance to compromise, he says.

> We were told that Japan's way was slow and inefficient, and we had to do business like Americans did or we would not keep up.
>
> **Yoshikazu Hanawa**
> Nissan Motor Co.

Hanawa spent five years in Tennessee helping to set up the company's assembly plant in Smyrna and, more recently, 18 months commuting among Los Angeles, Smyrna and Detroit, setting up Nissan North America.

These days, the 57-year-old Hanawa says he finds himself halfway between the American way and the Japanese way.

"Japanese people say I have changed. I like the American way. I expressed my opinion clearly. I kept to my own terms," he says.

"But still I am Japanese — I put my job before my family," he says. Hanawa's wife and three children stayed in Japan during his years in the United States.

Asked if Americans are changing more toward Japanese thinking, he says, "I don't think so. Americans don't like compromise." But, he added, he is sure they are trying.

Hanawa recalls that the Americans and Japanese clashed "every day" during his five years at Smyrna because of the two sides' different approaches to problem resolution.

"The Americans felt frustrated all day. We felt frustrated," he recalls.

The disputes were not over major issues, he says. Rather, it was the small things that triggered disputes, like one discussion over telephone poles that "went on for months," he recalls.

Hanawa's original impressions of the United States changed during his tour there, he says. He was 11 years old when World War II ended, and he remembers the poverty of his teenage years in Japan, of "trying to support myself with grass that I pulled from the side of

Chrysler headlines sound like '80

JOSEPH BOHN
Staff Reporter

Chrysler dying? Baloney > 12

Shades of 1980.

A "troubled," "cash-poor," even "sick" Chrysler Corp. is again making headlines in newspapers such as *The Boston Globe* and *USA Today*. Articles raising questions about Chrysler's long-term survival have even spooked some buyers from showrooms.

To be sure, as Don Buhler, owner of Buhler Dodge in Red Bank, N.J., and co-owner of Buhler & Bitter Chrysler-Plymouth in Hazlet, N.J., pointed out, "the negative talk is not nearly as bad as 10 or 12 years ago."

At that time, Chrysler's problem was paying its bills.

The 1991 company can easily pay its bills, and reported $3.1 billion in cash and marketable securities as of June 30.

But the long-term challenge is continuing to fund future product development as new products are introduced — and to see that those new products sell.

A West Coast Chrysler dealer, who declined to be identified, said negative publicity has hurt his sales.

"They don't want to buy the product unless they can absolutely steal it because they don't feel Chrysler will be around to back the warranty," he said. "I think it's unjustified. The whole auto industry is suffering right now."

But other Chrysler dealers, such as Robert Harris, general manager of Mission Chrysler-Plymouth in West Covina, Calif., said they haven't had any customer feedback from the negative publicity.

"Most of the people that come in here are loyal Chrysler buyers that don't care what anybody said. The only feedback we had was on the

TRUCK INDUSTRY

Parts and service keep heavy-truck dealers in the black, ATD survey finds

JOSEPH BOHN
Truck Editor

Medium- and heavy-truck dealers' profitability has been very good in view of the depressed new-truck sales market.

The American Truck Dealers' 20-Group surveys show that parts and service sales continue to be strong and dealers are doing an excellent job of service absorption.

That means parts and service departments are covering more of the dealerships' overall operating expenses, said Fred Stevenson, manager of the group's consulting services in McLean, Va. But service work alone can't compensate for a plunge of nearly 20 percent in new-truck dollar sales.

The truck group is a division of the National Automobile Dealers Association.

For the first five months of 1991, the average dealer had a total net operating profit of $53,000, down from $167,500 in 1990.

Dealers have been earning an 0.8 percent net profit on sales compared to a 2.2 percent profit in 1990.

The average dealer's new-truck sales of $3,509,000 in the period were off 19.9 percent from $4,382,500 last year.

The average dealer's service absorption rate rose 2.3 percentage points to 91.1 percent during the five-month period, compared to the 1990 percentage.

Total parts sales of $1,594,000 were off only slightly from $1,602,000 in 1990.

Total labor sales of $580,500 were up from $564,500 in 1990.

Used-truck sales of $865,000 for the five-month period this year were about even with the $862,500 in sales recorded during the year-ago period.

BRIEFS

Bendix cautions on brake failures

ELYRIA, Ohio — Bendix Heavy Vehicle Systems sent out advisory letters to 101,000 owners of 1987 and later-model Kenworth, Peterbilt and Freightliner trucks, warning them of potential parking brake problems.

Bendix said a 1987 change in engine oil formulation from SF to SC can cause deterioration of the valve seal, permitting the parking brake to self-release, according to its lab research and field test data.

There have been at least 18 accidental self releases on its MV-2 parking brake valves over the past 17 months, though none has caused injury, the company said.

Bendix advised owners to have dealers or authorized distributors install MV-2 service kits installed to eliminate the potential problem.

Isuzu Truck plans new headquarters

SOUTH EL MONTE, Calif. — Isuzu Truck of America Inc. expects to move into new corporate offices in Brea, Calif., by Thanksgiving.

Steve Allen, Isuzu Truck vice president and general manager, said the company will occupy about two-thirds of a new building now under construction.

Isuzu Truck has been in its present location for seven years and has grown rapidly. The company employs about 75 people and is adding a few people in sales and marketing.

The new building will give Isuzu Truck more room to expand and a more central location, Allen said.

Public recognizes truck progress

DETROIT — Truck manufacturers received high marks for their safety and environmental improvements in a national survey conducted by ICR Research Group in Media, Pa., for the Motor Vehicle Manufacturers Association.

Some 81 percent of 1,000 survey respondents agreed that today's trucks are more pollution-free than older models.

Seventy-nine percent agreed that truckmakers have done a good job of making trucks visible to other drivers at night, and 60 percent agreed that today's trucks are equipped with state-of-the-art safety features.

Still, the survey also showed the public feels that truck drivers have significant room for improvement in driving safety and consideration for car drivers, even though respondents recognized the difficult job truck drivers have.

Until safety issues, especially driver safety, are neutralized, trucks pulling more than one trailer probably will be unacceptable to the public, ICR said.

Sales soothsayers see recovery — sometime

JOSEPH BOHN
Truck Editor

Medium- and heavy-truck sales continue to be soft — and puzzling — to manufacturers who are monitoring every indicator they can to figure out when the recovery will occur.

As Terry Huber, Ford Heavy Truck Operations dealer sales manager said, "We're confident the recovery will occur; but we're having a difficult time pinning down when and how much recovery there will be."

Soft sales numbers of Classes 4-7 and heavy Class 8 trucks are causing all makers to study their plant capacities and to see what they can do to keep assembly lines going without a lot of downtime.

Ford has been more aggressive in marketing its Cargo trucks after moving production from Brazil to the Kentucky Truck Plant in Louisville this year.

Huber declined to discuss dollar figures, but dealers say Ford has been offering dealer incentives of $1,600 on the CF-7000 to $2,000 on the CF-6000 and CF-8000.

Ford has various other incentives on Cargo and some of its other medium-duties, including a special salesperson contest.

Importers like Isuzu Truck of America Inc. and Mitsubishi Fuso Truck of America also have been putting incentives on their low-cab-forwards to counteract the contraction in this segment.

Isuzu's year-long salesperson/sales manager contest, for example, pays several hundred dollars per unit, according to Steve Allen, vice president and general manager.

The company has managed to increase its share of the low-cab-forward segment this year, but overall, its sales are down. As the biggest retailer of low-cab-forwards, Isuzu's share of this segment in Classes 4-6 rose to 14.4 percent in the first five months from 13.6 percent a year ago. Its overall sales are down primarily because of lackluster demand from major fleet accounts.

It's all over for Iveco, but for parts and service

JOSEPH BOHN
Truck Editor

Iveco Trucks of North America Inc. has ended sales several months earlier than anticipated.

The company, which almost a year ago announced it was pulling the plug on U.S. operations, is still in business as a parts and service organization. Its headquarters will be in Bensalem, Pa., according to James Underwood, senior vice president of sales.

Underwood is working with other officials at Iveco's offices in Blue Bell, Pa., to put the parts and service organization together.

Underwood said that work will be done in about 40 days, and that he will leave the company then.

He expects finalization of the new organization to require another couple of months. The organization is actually operational now, but requires a finance support staff and some additional personnel who will transfer from Blue Bell to Bensalem.

The Blue Bell office will be officially closed Dec. 31. Aside from Underwood, a few officials such as Luciano Rolando, chairman and president, and William E. Eichner, senior vice president of business planning, are still there.

Iveco has sold every truck it had brought into the country, an estimated 1,400 to 1,500 unit inventory, according to Underwood.

Strong dealer support was the key to selling the products so quickly, Underwood said.

Iveco lost only about a dozen dealers since announcing last September that it would stop selling trucks in the United States by the end of this year.

It forecast needing about 140 dealers to maintain strong service and parts support after its pullout. In fact, about 150 to 155 dealers out of 165 have elected to continue servicing the trucks.

The company gave dealers strong support and they sold the inventory quickly.

Underwood declined to give specific dollar figures, but dealers said their salespersons received $700 spiffs on each unit they sold and the company added $2,000 to $4,500 in incentives per vehicle.

Underwood said although dealers cleaned out the supply pipeline rapidly they did not order additional trucks, which they had the option of doing through June 30.

Both Sterling Motor Cars and Peugeot Motors of America, which earlier this month announced their withdrawals from the U.S. market, will go through a similar experience.

The key to an orderly transition out of the country will be "their ability to keep their sales force together," Underwood said.

CENSUS

FROM PAGE 1

stores that stock two or more imports but no Big 3 line.

The loss of 328 dealerships in the first half indicates that the full-year decline will be more severe than it was in 1990. Last year, the downturn for the industry was 452 outlets. Unless there is a late-year improvement in the industry's fortunes, the 1991 dip could be close to 700. That would be the steepest drop since 1982, the final year of the early 1980s recession.

All figures in this article and the accompanying tables refer to the net change in dealership totals.

For the Big 3, franchise counts of individual makes tumbled along with the corporate dealership figures. Chevrolet and Ford, the two biggest dealer organizations, were down 85 and 80. Plymouth, Dodge and Chrysler reported declines of 56 to 59; Pontiac, Eagle, Oldsmobile and Mercury dropped 20 to 31.

Buick, the only domestic make to show a sales increase in the first half, lost 15 dealers. The only Big 3 dealer group to show a gain was newcomer Saturn, which rose from 58 at the beginning of the year to 108 on July 1.

The nation's dealers held 459 fewer Big 3 franchises on July 1 than they did on Jan. 1.

It was a different story for the Japanese, which account for nearly two-thirds of the import franchises. Their totals were steady in the first half; no major increases, but no big declines, either. Toyota and Nissan wound up with six fewer dealers than on Jan. 1. Honda and Mazda were up five apiece; Mitsubishi added one.

Despite an 18 percent sales decline, Hyundai reported a first-half gain of 39 dealers, the biggest increase among the imports.

Franchise totals declined for all of the German, Swedish, British and French makes, but only Saab, Peugeot, Porsche, Volkswagen and Italy's Alfa Romeo had double-digit dips.

Peugeot is withdrawing from the U.S. market. Peugeot Motors of America has told its 151 U.S. dealers that after September, the French manufacturer will not produce cars for sale in the United States.

Sterling Motor Cars, with 124 dealers at midyear, also has thrown in the towel, effective at the end of the 1991 model year.

Although its sales plunged 67 percent, Yugo said it had a first-half decline of only one outlet.

The Japanese dominate the most important import segment — the single-line stores. There are 4,184 of them, and 3,353 (80 percent) are Japanese.

Honda is the leader with 789 exclusives, followed by Toyota, 703; Nissan, 525; Mitsubishi, 363; Acura, 299; and Mazda, 250. Hyundai, which reports 211 one-liners, has the most among the other nations. Also listing more than 100 exclusives are Japan's Subaru, 180, and Lexus, 107, plus Sweden's Volvo, 132, and Germany's BMW, 104.

In this tabulation, an exclusive is a dealership that has a stand-alone sales and service facility. All 501 Mitsubishi dealers have separate showrooms, but 138 of them share service quarters with another make.

The *Automotive News* import compilation includes U.S. dealer-totals for 32 makes of cars from eight foreign lands. The imports reported 11,300 franchises in effect on July 1, down just 36 from the Jan. 1 tally. As noted, the Big 3 franchise count dropped by 459 during that period.

Because of extensive dualing, the Big 3 dealership total and the import dealership total are much lower than their franchise tallies. The 18,639 Big 3 dealerships hold 38,710 franchises from the three corporations. Added to those

The loss of 328 dealerships in the first half indicates that the full-year decline will be more severe than it was in 1990.

18,639 outlets are 4,184 import exclusives and 1,121 import-only duals, resulting in a total of 23,944 new-car dealerships in the United States.

An estimated 16,374 locations handle a captive import along with their domestic cars, but those outlets are included in the Big 3 total. A captive import is a foreign-built line sold only by the Big 3 make that imports it. Pontiac LeMans and Ford Festiva are examples.

And some Big 3 stores carry an independent import along with their domestic and captive brands. Those import franchises also are counted in the Big 3 total.

Thus, the three elements of the new-car-dealership population in the United States are Big 3, import exclusives and import-only duals.

On July 1, cars with foreign nameplates could be purchased at an estimated 22,585 dealerships in the United States. That included the 16,374 Big 3 outlets with captive imports and the 5,305 import-only spots. The balance were Big 3 duals with independent imports (with no captive in the house).

Most captive imports are not included in the mid year franchise count of 50,010 because they are part of the parent franchise. Exceptions are Chevrolet's Geo and Chrysler's TC by Maserati, which are separate franchises and are listed separately.

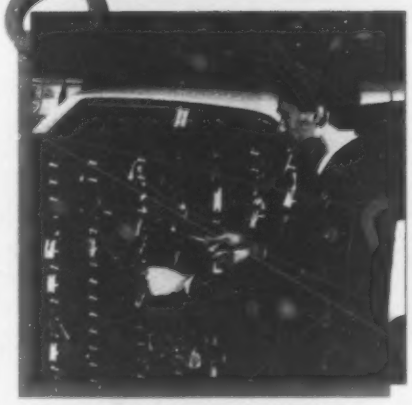
CUT YOUR OVERHEAD!
...and reduce lost sales

We Did...



"Since we installed the KEYper we have saved $150 a month on key cutting costs. It's paid for itself already by stopping lost sales!
John McClure, Courtesy Chevrolet, Thousand Oaks, CA

"The KEYper is one of the best investments we could have made. We used to have people get mad and walk off when we couldn't find the keys. I think it's safe to say KEYper has saved at least three sales per month.
It's already paid for itself, probably a couple of times over, and that's in just three months. I like it and I can certainly recommend it."
Jessie Vinson, Dutch Miller Chevrolet-Geo, Huntington, West Virginia

"We saved staff time and freed our receptionist for other duties by installing the KEYper.
We've also eliminated duplication of keys. That's $70 a month for keys and four hours of managers time."
Tommy Nash, Nash Chevrolet, Lawrenceville, GA

Cut Your Overhead...For Pennies a Day...Less than 50 cents per car, per month!
Reduce lost sales, control keys, and duplication costs and eliminate wasted time. KEYper's locking peg keytracking system will "lock in" savings for your dealership.

Call Toll Free for more information on cutting your overhead.

Lexus, Infiniti outsell German foes

DAVID VERSICAL
National Editor

For the first time ever, both Lexus and Infiniti outsold BMW and Mercedes-Benz last month.

The development is another sign of the growing strength of Japanese luxury cars and comes less than two years after the two makes entered the U.S. market. Lexus had outsold both of the prestigious German makes three times before. Infiniti topped BMW for the first time in June, and last month it outsold BMW again while passing Mercedes for the first time.

Lexus sold 6,550 cars in July, and Infiniti sold 5,441, its best month ever. BMW had 4,859 sales, a 3.2 percent hike over July 1990 that was aided by a 11.8 percent increase for its 3 series, which includes the new 325. Mercedes sales fell 9.9 percent to 4,758.

Lexus sales rose 17.0 percent, helped by 1,446 sales of its new SC400. Infiniti's rose 158.2 percent. While M30 sales fell, Q45 sales more than doubled. Infiniti gained 1,885 sales from the G20, which wasn't on the market a year ago.

Overall sales of imported cars continued to underperform the total U.S. car market in July. Sales of imported cars were off 8.3 percent for the month, while total car sales fell 3.8 percent.

That echoed the trend for the first seven months of the year. Imported cars were off 16.8 percent, while total car sales in the United States dropped 13.0 percent.

Canada sales climb 12% in July; cars and trucks share the gains

ANNE E. WRIGHT
Chief Statistician

Sales of light vehicles in Canada continued to pick up steam in July, rising 12.2 percent over 1990.

Car sales rose to 84,088, up 13.8 percent over the year-ago month. It was the fourth straight monthly increase for cars.

Truck sales also picked up speed, climbing 9.1 percent over July 1990.

Each of the Big 3 posted gains, and 10 import makes had double-digit increases. BMW, Hyundai, Nissan, Subaru and Toyota were up more than 20 percent each. Suzuki and Mercedes-Benz dropped about 30 percent.

General Motors of Canada reported its best July for cars since 1986. Its 40,764 sales were up 12.9 percent over the year-ago period.

GM also saw signs of hope in its truck sales, which rose 1.3 percent.

"Since a number of our truck sales are to the construction industry, this represents encouraging signs of economic recovery and growth," said Michael Erdman, vice president of marketing for GM's Canadian unit.

Chrysler Canada posted a 33.8 percent increase in combined car and light-truck sales for July. Led by minivans, the company's 10,486 truck sales set a record for the month.

Ford of Canada reported its second straight monthly car sales increase in July and its first monthly truck sales increase this year. Combined car and truck sales were up 6.2 percent over July 1990.

Ted C. Goellner, vice president of general sales for Ford of Canada, said the "general economic recovery" and buyer incentives are bringing people back into showrooms.

The July increase brought total Canadian car and light-truck sales to 819,171 for the first seven months of this year. That was 2.0 percent below the 1990 total.

CHRYSLER

FROM PAGE 3

automatic transmission (the electronic A-604 transmission that *Consumer Reports* labeled a lemon), andChrysler had enough ammo to take care of that," Harris said.

Chrysler's publicity problems have largely resulted from various efforts to raise cash, such as its proposed new-stock issue, the proposed sale to partner Mitsubishi Motor Co. of Chrysler's share of their Diamond-Star Motors joint-venture plant in Normal, Ill., which has received FTC approval, and possible sale of Chrysler's stock in Mitsubishi.

One of the most direct predictions of Chrysler's demise to appear in the media came in the Aug. 8 issue of *USA Today*.

The article covered Chrysler's proposed mid-September sale of 56 million shares of new common stock to raise more than $700 million. The story quoted William Unverzagt, senior investment officer of the Oregon public employees retirement system: "Why would anybody want to buy stock in a company that probably won't be in business two or three years from now?"

The same article raised the issue of a merger partner for Chrysler. It quotes Chrysler President Robert Lutz as saying, "You can't find a husband for a woman who's on her deathbed in the hospital." Lutz quickly added, "If you're so sick you need a partner, you can't get one."

A separate article in the same issue quotes Michael Mulvaney, of Moody's Investors Service, as saying that even the sale of additional stock "doesn't solve the fundamental financial difficulties" of Chrysler.

Newpapers such as the *Boston Globe* and *The New York Times* have drawn attention to Chrysler's underfunded pension obligations, enormous amounts of money required to retool for new products and a generally "troubled" and ailing position.

Thomas Kowaleski, Chrysler manager of product and marketing public relations, said officials were "disappointed" but not overly concerned about the negative publicity. They're counting on the new products Chrysler will begin launching in January. Launches will start with the V-10 Dodge Viper followed by the Jeep Grand Cherokee in March and the new LH sedans in fall.

"We're just cranking like crazy on all the things that will begin happening in January. Our best PR campaign will be seeing the new products. When you have good products you don't need a lot of smoke and mirrors," he said.

Chrysler officials are relying on their new products for improvement. And they will need an improvement in the economy, which has devastated the financial results of all of the Big 3.

In the first six months of 1991, Chrysler lost $810 million on revenues of $13.61 billion, compared to a net profit of $251 million in 1990 on revenues of $16.48 billion for the first half of 1990.

At June 30, Chrysler had negative net working capital of $2.7 billion, about the same as at the end of the first quarter.

HANAWA

FROM PAGE 3

the road."

That sense of extreme need "is imprinted deeply on my mind," he says.

During those years, America was held up as "paradise," he recalls.

When he first arrived in the United States in 1979, he was surprised at the poor conditions in some of the inner cities. But in many areas, including the suburbs of Detroit, he saw "the big houses, the big cars, the paradise I had imagined."

Hanawa also remembers learning about American business methods after the war.

"We were told that Japan's way was slow and inefficient, and we had to do business like Americans did or we would not keep up," he said. "We were told we had three problems: lifetime employment, the seniority system and company unions."

Economists and manufacturing experts have long since recognized the three as being pillars of Japan's competitiveness.

Before coming to the United States, he admits, he thought that Americans did not work as hard as Japanese and, therefore, that the quality of the cars could not be as good.

"But I changed my mind," he says.

Nissan has taken the lead among Japanese automakers in promoting its American staff. Hanawa thinks that is essential, and he is critical of companies that rely on Japanese management in their U.S. operations.

"We have to ask ourselves whether we are giving jobs with enough challenge to Americans," he says, noting that U.S. managers and workers are justified in feeling angry at being frozen out of senior positions.

"One of the most important things is how much trust we put in Americans. I do believe we must trust the Americans," he says.

But the actual mechanics of working that out is not so easy, he says.

"The Japanese way of conducting business is that we do not actually clarify areas of authority in clear black and white terms," he says. "But Americans want to know what authority they have, what responsibility, and then they don't want others poking into that area."

He thinks Japanese management must set clear targets for their U.S. counterparts.

In sales, for example, "the Japanese way is to sell as much as possible. But Americans ask how many units we want them to sell. We just say, 'As much as possible.' Then they have to do their best, even though the object is not clear."

Now, he says, he is adjusting to the American way. "One day, I say, 'Do this much.' Next year, I ask, 'How did you do?' "

Back in Tokyo, he is doing some of the same things he was doing last year in the United States, when he says he was arguing with the home office constantly to get enough product to the dealers.

Hanawa started with Nissan in 1957, after graduating from Tokyo University with a degree in economics. He was manager of personnel sections in two plants in Japan before joining the U.S. operation, later becoming general manager of corporate planning.

Now, as an executive vice president with extensive American experience and a key adviser to President Yutaka Kume, his name appears on many lists of candidates for the top office.

CERTIFY

FROM PAGE 4

eral European makers have abandoned the American market for many reasons. But multi-million-dollar U.S. compliance programs were factored into those decisions.

"I remember our director of engine development telling me that the company sold 15 percent of its cars in the U.S. and he had 50 percent of his engineers working on U.S. emissions problems," Drexl says.

Some import-company executives wonder if this growing mountain of standards may be a form of trade barrier.

"It's definitely moving in the direction of greater difficulty," says Wilhelm Hall, manager of emission-control systems for BMW of North America. "But really, the primary trade barrier is the fuel-economy requirements, which are done during the same tests as emissions. And we believe those requirements are most unfair to us. Obviously, smaller carmakers will have more difficulty absorbing compliance expenses."

Hall estimates BMW's costs for U.S. compliance in the "hundreds of millions of dollars." But he says BMW is determined to stay in the U.S. "no matter where the costs go" because "history has shown that the U.S is the proving ground for new technology."

Cliff Tyree, a project manager in the EPA certification branch in Ann Arbor, Mich., says makers' costs for compliance should have dropped in the last few years. He says procedures and regulations have been fairly static and future standards should not present significant cost or equipment change.

Some makers say that compliance is just another part of the cost of doing business in the U.S.

"It certainly wasn't just the cost of certification that made Peugeot pull out of the U.S. market," says Richard Lucki, U.S. factory representative for Peugeot Motors of America. "Yes, there were considerable changes to the 405 to comply. Emissions systems, injection equipment, on-board diagnostics are all different on U.S. vehicles. Vehicles must also be reinforced for crash requirements and fuel-system integrity. But it has to be done."

Lucki adds that almost all of the compliance requirements for the 605, which Peugeot had hoped to sell here, were completed before the decision to pull out of the U.S. market. The car was conceived and engineered as a world car.

Despite international automakers' attempts to build world-vehicles that comply in all markets, U.S.-bound vehicles still undergo many hardware changes.

One engineer from a European-car company says it takes nine months to complete certification. And he predicts that the tougher impending clean air standards and 100,000-mile durability requirements for emission systems will likely stretch that period to a year.

Upturn stalls; Aug. 1-10 sales decline 10.5%

DAVID VERSICAL
National Editor

Any sales momentum the industry gained in recent months hit a roadblock in early August.

Total car and truck sales were down 10.5 percent from last year. While the decline was a bit less than the industry's 13.4 percent drop through July, the early-August period was compared to a terrible 10-day stretch a year ago.

Iraq invaded Kuwait on Aug. 2, 1990. And the corresponding 18.4 percent decline in domestic sales at the start of that month prompted Chrysler Corp. Chairman Lee Iacocca to declare, "The industry is in the tank."

That was again the case for most domestic divisions. Every Ford Motor Co. make was off, with Lincoln diving 29.6 percent. Sales at each of Chrysler's divisions fell at least 12 percent, according to *Automotive News* estimates. The only gainers among Big 3 divisions were Oldsmobile, up 5.5 percent, and Buick, a continuing bright spot, up 12.7 percent.

American Honda Motor Co. Inc. and Nissan Motor Corp. in U.S.A. also provided some exceptions. Honda Division sales increased 38.0 percent. And Nissan reported a 9.4 percent gain for its Nissan Division while its Infiniti sales more than doubled, to 1,088.

Infiniti sales have improved sharply in recent months. Infiniti dealers give credit to a new program that ties dealer cash to customer satisfaction. As dealers explain, they get no cash if their stores fall below minimum CSI goals. But if they exceed the standards, the amount of cash increases as sales volume and CSI ratings rise.

One dealer said $5,000 was the top award per car, but an Infiniti spokeswoman said that was "too high." She declined to give details.

Total car sales in the United States were off 8.8 percent in early August; truck sales dropped 13.7 percent. *Automotive News* estimates 10-day sales for most import makes and Chrysler Corp.

There were nine selling days in the sales period each year.

Staff Reporter Kristine Stiven Breese in Los Angeles contributed to this report.

Chrysler adds rebate on America; buyer cash boosted on other cars

Chrysler Corp. has increased the customer rebates on several of its 1990 and 1991 cars and has added the 1991 Dodge Shadow America and Plymouth Sundance America to the payment list.

Buyers of the price-leader America models will receive a $700 rebate until Sept. 30.

Elsewhere, customer rebates have been hiked $300 and $500 on a number of models.

The 1991 Shadow convertible received a $500 increase, to $2,000.

Also raised $500 were the rebates on the 1990-91 Chrysler LeBaron sedan, Plymouth Acclaim, Dodge Spirit, Plymouth Laser RS Turbo and Eagle Talon TSi, plus the other 1991 Lasers and Talons and the other 1991 Shadows and Sundances.

Customer rebates have been increased $300 on the 1991 Eagle Summit ES three-door, 1990-91 Summit four-door, 1991 Plymouth/Dodge Colt GL and base three-door, all 1990 Colts and the 1990 Sundance/Shadow (excluding the America).

Chrysler made no changes in its consumer rebates on Dodge trucks, Jeeps and minivans.

All of Chrysler Corp.'s incentive programs are scheduled to expire Sept. 30.

Volvo has extended its dealer incentive package to Sept. 2. The importer is paying dealers $1,500 for sales of the 740 and the 940 Turbo and GLE models.

Legacy (1991) — $1,200
XT, XT6 (1991) — $2,000

NISSAN

FROM PAGE 1

Hesterberg should recognize a good deal of the structure and strategy. Much of it has been adapted from Infiniti. Although Infiniti sales have trailed rivals Lexus and Acura, Infiniti has an almost unblemished record in customer satisfaction. That's an area Nissan believes it has to improve if it is going to be truly competitive in the 1990s.

"It was our intention from the beginning not to do things the normal way at Infiniti," said Thomas Mignanelli, president of Nissan Motor Corp. in U.S.A. "We wanted to use Infiniti to test things and find new ways to solve old problems; we've done that." He calls Hesterberg's familiarity with the Infiniti approach "a secondary benefit." The primary one is that he's young and smart, Mignanelli said.

Nissan has begun to mimic Infiniti. For example:

- A pilot organization in Nissan's Dallas region mirrors the way Infiniti's regions are set up. The goal of the new program, due to be extended nationally during the next year or so, is to empower Nissan managers who are closest to dealers to make decisions. Many of those decisions are now made at headquarters.
- Nissan is slowly putting into effect a new dealer communications network that will resemble the satellite network Infiniti uses to connect all dealers with each other and regional and national offices.
- Infiniti dealers can earn up to $25,000 each quarter for top performance in the division's customer satisfaction program. Nissan Division is looking at similar ways to reward dealers.
- Both Nissan and Infiniti moved the sales needle in June and July. They did so with extremely expensive dealer incentive programs. Infiniti's program was tied to CSI performance; Nissan may begin doing that as well.
- While it would be too costly for Nissan to run a training facility for dealer personnel like the one Infiniti has in Scottsdale, Ariz., the regionalization program will emphasize training for dealership staff at the regional level.

"We have been testing rather novel concepts in how we deal with customers and dealers," Hesterberg said. "And you'll probably see pieces of that creep into the Nissan operation. We definitely think there are other applications for what we've been doing."

Under Infiniti's regional approach, dealers generally have less contact with national headquarters. As a result, many dealers, especially those outside California, don't know Hesterberg well.

"Earl is very astute and tuned into the market. But I was surprised to see him go because we were just getting comfortable with him," said Joe MacPherson, owner of MacPherson Infiniti in Tustin, Calif. "It's good for Nissan; I don't know what it means for us." Infiniti has not yet named a replacement for Hesterberg.

Another Southern California dealer praised Hesterberg's salesmanship. Hesterberg joined Infiniti in March 1990. Before that he was the regional general manager of Nissan's Jacksonville region. He joined Nissan from Ford Motor Co. in 1982 as parts, product planning and sales promotion manager.

"Earl has a real sales sense," said Fred Miller, who owns a Nissan and Infiniti store in Van Nuys, Calif. "A strong sales dimension has been lacking at Nissan. We need to go back to NML (Nissan Motor Co. Ltd., in Japan) and say, 'Stop thinking production, start thinking sales and marketing.' Earl will lead that charge."

At least one dealer was put off by Hesterberg's age: "I don't think he's been in long enough to do this. He's the most innovative general sales manager I've ever run across, but he sure is young."

But an automotive advertising source believes Hesterberg's age made him the ideal candidate for the Nissan Division job. "The job wasn't getting done, so they bring in this 37-year-old wonder kid. There's nothing wrong at Nissan that new leadership and a competitive lower-middle-segment car can't help."

That car, Nissan hopes, will be the 1993 Stanza. It will be aimed straight at the Honda Accord and Toyota Camry.

It will also give Hesterberg a chance to remedy what he sees as one of Nissan's biggest problems.

"We have among the best products in the world," he said. "The missing link is our communication of the competitive advantage to the consumer of buying one of our cars. Obviously, we must be able to do that better."

SOVIET

FROM PAGE 1

no firm plans are in motion. General Motors would not comment onany plans it may have for the Soviet Union.

All four Ford stores are joint ventures among Soviet, Belgian and German entrepreneurs. The Soviets hold about an 80 percent interest, said Ford spokeswoman Lin Cummins. She said the stores initially will get all of their vehicles from Ford of Europe.

Ford is focusing on fleet sales.

Ford will accept only hard currency for its vehicles and will not accept the Russian ruble, Cummins said, so the vast majority of the sales will be to businesses. She said one large company plans to purchase vehicles and sell them to its employees.

Although dealerships will sell both cars and trucks, Cummins said most of the orders have been for transit vans and minibuses, similar to the Ford Aerostar.

She said customers from the Ukraine and Moscow, the wealthier areas of the Soviet Union, are buying Sierra and Scorpio cars. Cummins did not know the prices of the vehicles in Russia.

She said an advertising blitz will take place later in the year, including television commercials, billboards and direct mail. She said Ford also will participate in a co-op ad program with the dealers.

Cummins said the Soviet Union's large population gives it the potential for the highest number of vehicle sales in Eastern Europe, but she said Ford's expansion plans depend on the Soviet Union's future financial and political situation.

This year, Ford has established 18 dealerships and 33 service centers in Eastern Europe. Cummins said Poland, Hungary and Czechoslovakia have been the biggest growth areas because "they have been liberated the fastest and have more money."

Ford also has a dealership in Bulgaria, Cummins said, and is considering outlets in Romania and Albania.

Mercedes hikes prices by 4.4%

MONTVALE, N.J. — Mercedes-Benz of North America last week announced a sales-weighted price increase that averages 4.4 percent on most of its 1992 lineup. *Automotive News* estimates that the hike amounts to $2,215 per model.

The 11 models that have been priced go on sale Sept. 3.

Not included in the boost are the new top-of-the-line S-class four-door sedans, which go on sale in October. Also excluded are two new 300-class sedans, the 400E and the limited-production high-performance 500E. They are scheduled to appear at the end of this year.

Increases announced last week range from $600 on the 190E 2.3 four-door to $4,800 on the 500SL coupe/roadster.

1992 MERCEDES-BENZ PRICES

	1992 Price	Increase over 1991 price
190E 2.3 4-dr.	$28,950	$600
190E 2.6 4-dr.	34,000	900
300D 2.5 4-dr.	42,950	1,550

300CE coupe	60,400	2,500
300TE wagon	53,900	2,250
300TE wagon (4wd)	61,100	2,600
300SL coupe/rdst.	82,500	4,200
500SL coupe/rdst.	97,500	4,800

Designers from Calty peek at the future

PASADENA, Calif. — Car designers from Toyota's Calty Design Research Inc. in Newport Beach, Calif., saw 30 visions of the future in a summer design project they sponsored at Art Center College of Design here last week.

The project asked students to create any of three types of cars: A fun, lifestyle car based on a future need or intuition, a next-generation Celica, or a streamlined vehicle based on the Previa minivan chassis, with a long wheelbase and low, mid-mounted engine.

Alan Schneider of Studio City, Calif., used the Previa base to make his one-fifth scale model of "the ultimate expression of cab forward."

Michael Ma of Rosemead, Calif., designed a lifestyle car with "a happy face and open sides, a cross between a Jeep and a van" that includes bright yard chairs set facing each other in back so families will stay together and enjoy each other.

One car had clear Plexiglas panels exposing human legs and structural parts.

"Conceptually, we're looking for niche cars, a new area of vehicle. And the diversity we've found in this class is really amazing," said Erwin Lui, project chief at Calty and a designer of the new Lexus SC400 coupe.

The project is not intended to result in cars for manufacture.

Said design instructor Ed Taylor: "It's more important that these assignments reflect creativity, rather than that they be ready for production."

Trucks top 2 million, but trail '90

BOB DeMAYER
Special Correspondent

U.S. truck production surpassed two million units for the year last week. In 1990, the two-million mark was reached nearly eight weeks earlier.

Automakers scheduled 100,271 cars last week, up 15.1 percent from the preceding week but down 5.1 percent from the year-ago week.

Year-to-date, U.S. car production is 3,338,235, down 13.5 percent from 1990.

Truckmakers planned to build 70,726 units last week, up 32.3 percent from the prior week and up 22.0 percent from last year.

So far this year, 2,037,327 trucks have been assembled, 19.7 percent behind 1990.

Automakers split last week's estimated production as follows: General Motors, 41.0 percent; Ford Motor Co., 27.6 percent; Honda of America Manufacturing Inc., 9.5 percent; New United Motor Manufacturing Inc., 4.1 percent; Chrysler Corp., 3.8 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.5 percent; Mazda Motor Manufacturing (USA) Corp., 3.4 percent; Diamond-Star Motors Corp., 3.2 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.7 percent; and Subaru-Isuzu Automotive Inc., 1.2 percent.

GM scheduled two shifts of overtime last Saturday at its Flint, Mich., (Buick City) plant. The plant produces the Buick LeSabre and the Oldsmobile Eighty Eight Royale.

Chrysler's St. Louis (No. 2) minivan plant worked two shifts of Saturday overtime.

Mazda continued to operate on overtime last week to make up units lost during an equipment breakdown on Aug. 2.

CANADA: Canadian car production was estimated at 25,767 last week, up 60.2 percent from the prior holiday week and up 108.5 percent from the same week last year.

So far this year, 673,506 cars have been assembled, 3.7 percent more than last year at this time.

Truck production last week was estimated at 15,929, up 18.6 percent from the prior week and up 28.9 percent from the year-ago week.

Ford has idled its Oakville, Ontario, assembly plant this week because of lagging sales in the United States. The plant makes Ford Tempo and Mercury Topaz models, and 80 percent of its production is exported to the United States.

The company has scheduled one shift of daily overtime this week at its St. Thomas, Ontario, car plant, which produces the Ford Crown Victoria and Mercury Grand Marquis.

15-minute charge for Nissan electric

Nissan Motor Co. Ltd. planned to unveil a new electric vehicle today in Tokyo that can be recharged completely in 15 minutes, instead of several hours required by most proposed battery systems.

The Nissan FEV (for Future Electric Vehicle) uses a 444-pound nickel-cadmium battery and two motors rated at 27 horsepower each to achieve a top speed of 81 mph and a range of 100 miles driving at 45 mph, according to Nissan North America officials in Detroit. The aerodynamic 2+2 weighs 1,984 pounds and has a wheelbase of 96 inches. Its air conditioner uses a coolant friendly to the environment, and a heat-insulated windshield improves visibility.

Big 3 sales drop sharply

DETROIT — Big 3 vehicle sales for the middle 10 days of August totaled 197,678, falling 16.3 percent behind last year's 236,068.

Chrysler Corp. sales fell 23.6 percent according to *Automotive News* estimates, Ford Motor Co. sales were off 15.3 percent and General Motors declined by 14.6 percent.

Big 3 vehicles sold at a 24,710 daily selling rate compared to 29,509 in the 1990 10-day period.

LOW POINT

Recession is over, say analysts, but growth will be slow in '92 model year

CHARLES M. THOMAS
Staff Reporter

Showroom traffic is steadily improving at Rieneke Ford, but many of the customers are only browsing — they can't qualify for financing because they are so loaded with debt.

"Traffic is up, but a lot of them can't buy because their credit is such that they can't afford it financially," said William Rieneke Sr., owner of the Ford-Lincoln-Mercury dealership in Fostoria, Ohio.

The auto industry is languishing in a slump that started in 1989, according to some dealers, a full year before the economy was officially labeled in a recession. But the consensus among economists is

Less rental, fleet sales for '92 ➤ 3

Chrysler unveils 'Ultimate Guarantee' for '92 minivans

MARY CONNELLY
Staff Reporter

Chrysler Corp. will launch an aggressive five-prong minivan marketing assault Oct. 1 that may become a test program to wean the company from cash-back and low finance rate incentives.

Called the "Ultimate Guarantee," the program will give 1992 minivan buyers a resale value guarantee, a choice of warranties, a roadside assistance plan and a free car phone, according to dealer sources.

The Ultimate Guarantee marketing program begins Oct. 1 and continues during the fourth quarter, dealers said. Chrysler has not briefed dealers on specific details of the program. But dealers received an overview of the program last week at the company's annual new-model announcement show for dealers in Denver.

The minivan marketing program may supplant retail incentives such as cash-back [illegible] reduced financing offers on 1992 models. If so, the Ultimate Guarantee may serve as a pilot program to determine if Chrysler can break away from the costly retail incentives now plaguing the domestic auto industry. Chrysler's incentive costs averaged $1,296 per vehicle in the second quarter of 1991.

The U.S. auto industry has tried to get out from under cash back

After more than two years of operating in secret, Mazda Motor of America Inc.'s luxury car project got down to its first public task last week and took steps towards selecting a dealer body.

Mazda's new Amati division hopes to name its first dealers within a few months and plans to have 50 dealers in operation when the channel opens in spring 1994. If the initial response is any indication, Amati will be able to be selective. Within 48 hours of announcing that it would go ahead with a second sales channel, Mazda fielded 150 calls from dealers seeking information.

"The phone is ringing off the hook," said Jim Duffy, Amati's group sales manager. For Mazda, the move marks a bold step into a league where its larger Japanese competitors have already proven that Americans have a taste for Japanese luxury cars.

For U.S. luxury car dealers, Amati represents either more competition or a fourth opportunity to pick up a Japanese luxury franchise.

And for the maturing baby boomers Amati hopes to attract, the division means two more products to choose from in a luxury field that, Mazda predicts, will grow from 1.3 million units currently to 1.6 million by the mid-1990s.

That statistic was one item gleaned from Mazda's "exhaustive" two-year study of the luxury car market, conducted by its Pegasus task force.

Some dealers and analysts questioned whether Mazda was capable of supporting such a move and if the U.S. market could absorb another player.

But Amati's new general manager, Richard Colliver, outlined three reasons why Mazda felt confident enough to dismiss worries about the market's health and Japanese trade tensions and go ahead:

- "Dealer profitability is going to be a top priority," said Colliver.
- Amati will begin by selling two all-new sedans exclusive to the franchise. They will be built in a new assembly plant designed for luxury cars.
- The dealerships. Amati says it has taken the best ideas from Acura, Lexus, Infiniti and Saturn and will add some of its own to create a "warm and friendly place where customers and salespeople

Fielding questions at the Detroit announcement were Mazda Motor of America executives Richard Colliver, Amati division general manager; Yoshi Taura, president; and Clark Vitulli, senior vice president.

Turmoil in Soviet Union highlights opportunities for Western carmakers

JAMES R. CRATE
International Editor

Despite the likelihood of continuing economic and political disarray in the Soviet Union, last week's failed coup there clears the way for a long-needed overhaul of the moribund economy and points to greater, not reduced, investment potential there.

But the very fact of the failed coup underscores the West's obligation to underwrite Soviet reforms with massive injections of "targeted" assistance, economists and industry executives concurred last week.

"This puts great pressure on the West to help," a senior Ford of Europe executive, speaking on condition of anonymity, said late last week.

"The Putsch leaders, after all, considered widespread economic discontent to form the basis of their action. The fact they acted suggests to many Europeans that we might not have done enough in the past, and that we ought to get in there quickly."

Although reliable statistics are hard to come by, Soviet industrial output is off between 10 percent and 25 percent this year as individual factories, cooperatives and farms increasingly hoard their production for themselves or to "purchase" needed supplies.

At the same time, by some estimates inflation is running as high as 100 percent as the lifting of price controls and several devaluations of the ruble have sent prices soaring.

"If the reports and numbers are correct, then, in Western terms, the Soviet economy has collapsed," one analyst said.

To be sure, Americans have little direct stake in Soviet economic developments.

Even before the coup, the Soviet economy was in a free fall, and its trade and investment

DeTomaso visits ailing Maserati subsidiary

JIM HENRY
Staff Reporter

Maserati Automobiles Inc. is selling fewer than 10 cars a month in the United States, which has some people with Maserati ties wondering how long the company can keep its presence here.

Alejandro DeTomaso, the managing director of Maserati and chairman of DeTomaso Industries, Maserati's longtime parent company, visited the Baltimore-based U.S. subsidiary last week.

DeTomaso couldn't be reached for comment about Maserati's U.S. future, but George A. Garbutt, president of the U.S. company, and Howard E. Chase, a New York attorney and corporate secretary, said they knew of no plans to quit the U.S. market.

Garbutt said 1991 sales are below last year's, when Maserati sold its 50 U.S. dealers only 87 cars, compared to 213 in 1989.

"I wouldn't shed any tears if he pulled out of the U.S.," said Patrick D'Angelo, a Cleveland attorney and member of the DeTomaso Industries board.

In terms of sales volume, it's "ridiculous" for Maserati to stay in the United States, said Max Haechler, a Maserati dealer in Scottsdale, Ariz., who also has Rolls-Royce and Alfa Romeo franchises. He said he's had some cars in stock for two years.

Even as sales of Maserati's own cars dwindle worldwide, the company is starting to take in some money building and developing cars for its sister Fiat subsidiaries.

Fiat Auto S.p.A. bought 49 percent of Maserati S.r.L and the Maserati trade name last year for $117.7 million.

DeTomaso Industries, which owns 43 percent of Maserati S.r.L., reported a second-quarter net loss of $1.7 million, an improvement over a $3.0 million loss for the same period last year.

An article in the Aug. 19 issue incorrectly stated that Mazda sells its new sports coupe as the MX-3 in Japan. The car is sold under the names Presso and AZ-3.

latenews

CONTINUED *from* PAGE 1

There were eight selling days in the period this year and last.

New-car deliveries from Ford, GM and Chrysler totaled 117,073, trailing last year's 137,924 by 15.1 percent. New-truck deliveries totaled 80,605 compared to last years 98,144, a 17.9 percent decline.

Chrysler does its talking with Lee Iacocca's voice

HIGHLAND PARK, Mich. — Chrysler Corp. Chairman Lee Iacocca will play a prominent role in 1992 model year corporate advertising, sources said.

Iacocca will tout the upcoming Dodge Viper sports car and the company's new 7,000-person tech center in Auburn Hills, Mich., as examples of how the company has geared up to compete in the 1990s.

Sources also said Chrysler will follow through in the fourth quarter on an earlier promise to restore $40 million to $50 million cut from ad budgets during the industry's first quarter sales slump.

Ferrari gets injunction to prohibit F40 clone

ENGLEWOOD CLIFFS, N.J. — Ferrari S.p.A. has obtained a preliminary injunction enjoining the manufacture and sale of a "Xillion F40" replica.

Judge Federico A. Moreno of the U.S. District Court in Miami, upheld a magistrate ruling that Ferrari had a valid case of infringement and that continued manufacture and sale of the "Xillion F40" would result in irreparable injury to Ferrari.

This is the latest in a series of cases in which Ferrari has obtained recognition by court decision or court approved settlement of its rights in the distinctive appearance of Ferrari automobiles. The cases include cars now in production, such as the F40 and the Testarossa, and those no longer in production, such as the Daytona and the 308 and 328 models.

Isuzu selects new ad agency

LOS ANGELES — American Isuzu Motors Inc. has chosen San Francisco ad agency Goodby, Berlin & Silverstein to handle the creative and strategic planning for its $90 million national and regional account.

The new agency replaces Della Femina, McNamee/WCRS, which Isuzu dropped last spring. Della Femina created the lying pitchman Joe Isuzu. Goodby, Berlin & Silverstein's first ads will appear early next year, when Isuzu launches a new Trooper sport-utility.

The agency currently handles the Northern California Honda Dealers account. One controversial campaign contrasted "heathens" in Southern California with their more urbane neighbors in the Bay Area. Agency executives said it was too early to say if they'd have to give up the Honda dealers' business.

Goodby, Berlin & Silverstein will open an office in Los Angeles.

Isuzu Senior Vice President and General Manager E.F. "Fritz" Kern said Isuzu discovered "a real simpatico between the top people at our company and the principals at the agency."

Cadillac sets prices of '92 Eldorado, Seville

BLOOMFIELD HILLS, Mich. — Cadillac increased the prices on its 1992 base Eldorado and 1992 base Seville by $975 and $780, respectively.

The price for 1992 Eldorado is $32,470, up from $31,495 in 1991; the price of the 1992 Seville is $34,975, up from $34,195 last year. The 1992 Eldorado touring coupe is priced at $34,970 and the 1992 Seville STS is priced at $37,975.

Peter Gerosa, Cadillac general sales manager for sales and service, noted that the standard Seville and Seville STS come in at $5,000 and $2,500, respectively, less than the 1991 Lexus LS400, which starts at $39,000. Lexus has not announced 1992 prices.

Gerosa said Cadillac has made a commitment to dealers to not sell either car to daily rental companies for at least a year.

Mitsubishi Expo LRV carries $11,169 price tag

LOS ANGELES — Mitsubishi's new five-passenger Expo LRV sport wagon goes on sale today for $11,169. A companion model, the seven-passenger Expo, will have a base price of $13,549.

In May, Mitsubishi Motor Sales of America Inc. executives had said they expected the Expo LRV would start below $11,000 and the larger model would come in under $14,000.

Expo pricing could be a sensitive issue because the U.S. government is still investigating dumping charges against Japanese minivan makers. Although Mitsubishi says the Expos are cars, not minivans, the International Trade Commission and Department of Commerce have not excluded Mitsubishi from the investigation.

Chrysler offers dealers canned radio network

HIGHLAND PARK, Mich.— Chrysler Corp. is offering its dealers a closed-circuit radio network with programming that includes national and local dealer commercials.

Dealers get a choice of six recorded music formats, each with six 30-second national Chrysler commercials and six 30-second commercials customized to the dealer's products and services, said Mike Kelley, Chrysler sales promotion manager.

This is believed to be the first time an automaker has started such a program.

briefly

St. Louis pickets: 'Close at 6 p.m.'

The extended hours controversy, exacerbated by threats of bombs and other violence, continued last week at John Chezik **Honda** in St. Peters, Mo., with picketing by salespersons from other dealerships. The pickets' signs said: "Go home," "Greed," "Stop late hours Tuesday and Thursday," "Close at 6 p.m.," and "Will the owner work extra hours?" One picket, John Murphy of Dave Sinclair **Ford** in St. Louis, said, "We are trying to get them to close at six like everybody else." Another, from St. Charles **Nissan-Volkswagen**, said, "If they can't make it in 50 hours they can't make it. This is not a life." Pete Franklin, general manager of John Chizek Honda, said: "We want to stay open to sell cars. We want to be left alone. We want the right the work and feel we are being strong-armed."

POUNDING THE PAVEMENT — Lee Iacocca the salesman will tour several U.S. and European cities in September to drum up interest in the company's new equity offering of 56 million common shares. **Chrysler Corp.** told Wall Street analysts the tour will begin Sept. 3 in Detroit and end Sept. 26 in New York. Fifteen cities in the United States and Europe will be hit during the road show. Understudies Robert Lutz, Chrysler president, and Robert S. Miller Jr., Chrysler vice chairman, may fill in for Iacocca on some stops.

Salesman Lee: star of the show

GUILT COMPLEX — Jerry Hirshberg advises that **Nissan** Design International's famous excursions to movies have only a couple of rules: Everyone in the California office has to go, and they have to go in the daylight, so when they come out of a film (such as *Silence of the Lambs* and *Naked Gun 2½*), "they come out into the daylight and are forced to squint into the sun." It's meant to make them feel slightly guilty for playing hooky, says Hirschberg, the firm's vice president.

LOW LEVELS — On Aug. 1, domestic car inventories were at their lowest level in 10 years. The stockpile of 1,069,800 units was also the lowest Aug. 1 total since 1983, when there were 1,102,100 units in dealers hands, at ports of entry and in transit. Production cutbacks and enticing incentives consumer contributed to the reduction.

WINNER LOSES — The Institute of Electrical and Electronics Engineers Inc. will hold an interactive satellite TV conference Sept. 19 during which past winners of the Malcolm Baldrige National Quality Award, including **Cadillac**, will discuss their winning ways. According to the institute, the participants will "explain how to develop a quality program to gain market share, how to use the Baldrige Award as a self-assessment tool and how to build an effective quality team." Apparently, the institute doesn't realize that **Cadillac** has lost market share since it won the Baldrige Award last fall. At least Cadillac's William T. Lesner, who led the company's Baldrige quest and is now an examiner himself, will be able to discuss the other two key points of the institute's program. Corporations and universities are invited to participate for $1,000 or $850, respectively.

Which way for the Honda Way?

Philosophic legacy guides firm as it grows too big for old style

MARY ANN MASKERY
Staff Reporter

TOKYO — When automobile sales in the United States fell sharply early this year as the Gulf War discolored the world, Honda Motor Co. was the first Japanese company to trim its production plans and sales goals.

Automotive analysts wondered whether Honda, for political reasons, was trying to take a lower profile in a depressed American market. The reaction surprised President Nobuhiko Kawamoto. He said he was not concerned about what other companies did or what effect the announcement would have on politicians. It was a business decision, a reaction to a falling market.

"For this management team," he said, "it is important to act quickly."

Quick reaction, confidence, teamwork and uncanny timing have been hallmarks of Honda since it was founded in the ashes of World War II. Those characteristics were part of the founder himself, who died earlier this month.

Now Honda Motor Co. is in a transitional period, still firmly attached to the precepts of its founder, but at the same time aware that it can no longer function as an entrepreneurial shop.

Honda stumbled slightly in recent years. With weakening sales and a deteriorating image in its home market and thinner profit margins, commentators wondered if the Honda magic was gone. The feisty kid of the corporate world appeared to be growing old; Honda was too big for its own management style.

Attributes of the Honda corporate culture, many of which are rooted in Soichiro Honda's dynamic personality, have been evolving ever since he retired in 1973. The central philosophy of the company — the elusive Honda Way — continues to be the target of criticism from outsiders. But whatever it is, Honda Motor Co. seems to be adapting to it.

The troika of President Kawamoto and Executive Vice Presidents Shoichiro Irimajiri and Yoshihide Munekuni assumed office a year ago with the explicit intention of shaking up the decision making process. The new leaders talked with various branch offices, with dealers and employees.

"We finally concluded we need quicker action," Munekuni said. "The market is changing faster than us. We should be faster."

Their answer, a new management system described by Honda as "the largest restructuring since the company was established," was first imposed in March and is being worked out on the run.

It calls for a more centralized top-down structure that lays out clear lines of authority, a complete turn from Shoichiro Honda's unorthodox approach that left its impact on the company despite his own efforts to take a back seat in his retirement years.

The company still employs an open board room, where there are no offices, where everyone can talk, where top managers face each other from a circle of desks spaced barely 10 feet apart. The physical layout helps to promote *waigaya,* an internal company term for a kind of brainstorming approach to decision-making, which employees describe as part of "the unique Honda culture."

The brainstorming approach reflects Soichiro Honda's distaste for formality and any structured authority. But it was actually established after the retirement of Honda and his partner, Takeo Fujisawa. It was an attempt to fill in the void left by the founding geniuses by drawing on talent throughout the company. As such,

Marilyn White, manager of advanced styling for PPG Industries, is deeply involved in the color world. She trained as a fine arts painter and dresses with flair. "I love color. I always have. I like to wear it, to put it together."

Color gurus have eyes on the future

Look for the '94s to be dressed in lighter, brighter hues

WILLIAM R. DIEM
Assistant Managing Editor

Non-shiny paint will take its first tiny sliver of the market in the 1993 or 1994 model year when it shows up on a production car.

The shiny bright wet look will continue to dominate car painting, says one color expert, but it will be joined by low-luster paint that can be used as accent in a two-tone.

Marilyn White, manager of advanced styling for the PPG Industries color studio in Troy, Mich., would give no details, but she indicated that an automotive customer last year had chosen one of the low-luster paints showcased in PPG's paint show, Environomics, aimed at 1994 models.

"We've had dark colors that we've used in some applications, like cladding," said White. "Now we've got something that's clean and bright and low-luster. It's open for the designer to consider using anywhere on a car."

The three giants of automotive paint are PPG, BASF Corp. and DuPont Co., each with about a third of the market. They market their paints in different ways, but the goal of each is to let car designers know what is possible, and what is likely to be popular.

The Environomics show went to Mexico City last month after starting in the fall of 1990; the 1995 show is being prepared now for visits this fall to domestic manufacturers.

In June, BASF invited car designers to come mingle and look at BASF technology and trend prediction for the 1995 model year. The 1995 color show DuPont is preparing will be shown about 200 times.

Follow that trend

The matte paint PPG sold is a result of proprietary PPG technology, but its potential colors are a result of trend. And everyone

Drop in fleet sales expected for 1992

JOSEPH BOHN
Staff Reporter

Reduction in daily rental sales and cost-cutting by major corporations are expected to reduce fleet sales in the 1992 model year.

Fleets, including daily rental, corporate and governmental segments, accounted for 21 percent of all vehicle sales in 1990, according to the National Automobile Dealers Association. That's up 2 percentage points from the previous year.

Fleet sales have been running at even higher, record levels this year.

But as General Motors, Ford Motor Co. and Chrysler Corp. reduce sales to rental car companies by stretching out the minimum length of time rental firms are required to keep the vehicles, sales to the rental market may fall as much as 20 percent during the 1992 model year, according to George Frink, Chevrolet director of fleet sales.

At the same time, many major corporations are stretching out trade-in cycles on their fleet vehicles to cut costs, according to Ken Klink, director of new vehicle purchasing for GE Capital Fleet Services in Eden Prairie, Minn.

Frink noted that domestic auto manufacturers have encouraged longer trade-in cycles on rental cars to reduce the number of program cars they cycle through the market.

Program cars are sold to daily rental firms, then repurchased by the automakers at guaranteed rates and redistributed to dealers through auto auctions.

They have cost the auto companies a lot of money in subsidies and have cut into new-vehicle sales.

Ford lengthened its minimal holding period for daily rental units to six months from four months in May. GM is following suit with the 1992 models.

> Sales to the rental market may fall as much as 20 percent.
>
> **George Frink**
> Chevrolet

Chevrolet's new minimum holding requirement will be six to nine months, depending on the geographic area, Frink said. There is still a four-month minimum period for Florida because of seasonal factors.

The longer terms will be reflected more in the spring and summer than the early part of the model year, Frink said.

Chevrolet's initial 1992 fleet order flow is up from last year, but "it's awfully early to mail out projections," about the market, Frink said.

GE Capital, which as part of its leasing and service operation handles 400,000 vehicles, sees the 1992 market as flat to slightly down.

Klink said, "We're seeing a lot of major clients stretching

Toyota making big push to become player in fleets

JOSEPH BOHN
Staff Reporter

Toyota Motor Sales U.S.A. Inc. is pushing aggressively to get its restyled 1992 Camry under revolving red and blue lights.

At a meeting of law enforcement groups in Louisville, Ky., this month, Toyota paid the transportation costs and expenses for 200 managers of police fleets to tour its Georgetown, Ky., plant, where Camrys are built.

Toyota did not formally announce a program, but sales persons made it clear that a police package for the 1992 Camry is under serious consideration, said an official with the National Association of Fleet Administrators, which sponsored the law enforcement meeting.

Japanese automakers are trying to get a toehold in the commercial fleet market. Commercial fleets, including police fleets, is one of the last bastions of domestic sales strength. More than 98 percent of the all vehicles bought by commercial fleets are domestic nameplates, according to the fleet association, based in Iselin, N.J.

Some companies operating major fleets have policies against buying imports, and some fleet managers just consider it prudent to avoid them.

But many fleets are testing small numbers of import vehicles, and they "almost universally don't want to make public statements about what they're doing," said Dave Lefever, executive vice president of the association.

So far, no importer has made significant inroads into the market, but Toyota has made "an incredible effort to be the most visible company to fleets," said Lefever. "They do everything, are everywhere. Every fleet person they have pays dues to the NAFA."

Toyota is also buying ads, doing a lot of direct mail and making a lot of calls on people to increase its penetration of the fleet market, he added.

Nissan and Mazda are also vigorously pursuing the fleet market.

"Just a few years ago, fleets had to pay regular retail prices for an import. Now, they're beginning to offer more in terms of fleet incentives. They're doing more to advertise to fleet companies, and they are attending our conferences," Lefever said.

The National Association of Fleet Administrators has one major yearly convention; its 32 local chapters have monthly meetings. Import automobile officials have begun regularly attending those meetings, Lefever said.

Europe's car sales, still led by Germany, up 17.6% last month

JAMES R. CRATE
International Editor

Driven by what analysts say will be the last of a string of dramatic monthly increases in German demand, European new-car sales last month jumped 17.6 percent from a year earlier, the biggest gain since a 27 percent advance in July of 1985.

According to *Automotive News* estimates, the rise, to 1.26 million units, put year-to-date sales for the 17 countries 4.1 percent ahead of 1990's record pace, when the industry sold 13.42 million units for the full year.

The July run up pushed sales for the seven months through July 31 to 8.69 million units.

But once again, the strong demand in Germany masked continuing weakness in several of Europe's other major markets.

German sales, which soared 67.5 percent last month compared to July 1990, accounted for 39 percent of the 17-nation total, up from 35 percent in June and a more-normal 27.5 percent a year earlier.

Historically, German sales have accounted for about one-fifth of total European volume.

Sales in the depressed British market, which is off nearly 25 percent for the year to date, slid 21 percent in July from a year ago, while preliminary data point to a 25 to 30 percent decline in store for August.

France slipped 2.1 percent for the month, bringing the seven-month total to 1.21 million units, down 14.2 percent from a year earlier.

Spain, Europe's fifth biggest market, dropped 9.9 percent for the month compared to July 1990 and was off 15.3 percent for the year.

Italy, the second biggest market after Germany, showed no change from a year earlier.

Stripping out the German rise, total European sales in July would have been virtually even with a year earlier.

Analysts, pointing out that the German data were skewed by a special factor in July, said the run up over the past year has run its course because of higher tax and interest rates there, and a collapse of purchasing power in the former East Germany.

The Bundesbank, the German central bank, raised two key interest rates two weeks ago in a move aimed at reining in inflationary consumer spending. The move followed increases in the personal income tax and fuel tax that took effect in July.

"The German numbers were artificially boosted by the termination of a tax incentive on small, catalytic (converter) equipped cars there," explained Steve Reitman, who follows the industry for UBS/Philips & Drew in London.

"We suspect the bulk of these sales were dealer registrations to beat the deadline," he said.

Reitman, who holds to his earlier forecast of a 3 to 5 percent decline in European sales this year, said he expects to see a dramatic leveling out of German demand over the remainder of 1991.

"We expect August to show a considerable decline from July's levels" as tighter fiscal policies sop up consumer demand, he said. "Statistically, we'll get a more even picture of the market from here on out," Reitman added.

Philip Wylie, automotive analyst for Salomon Brothers in London, said a meaningful drop-off in German demand in coming months is a virtual certainty.

"With the runout of savings in the eastern states, which has fueled the German boom, it will be very hard to continue these rates of growth," said Wylie, who forecasts a 1.5 percent decline in European sales this year.

"The savings in the east have got to be tapped out by now," he said.

Still, industry executives and most analysts expect German sales to rise to about 4 million units this year, from 3.27 million in 1990. Most projections factor in sales of about 400,000 units in the former East Germany.

The strong demand from Germany helped most of the volume producers post sharply higher sales totals for the month.

■ Volkswagen Group, the European and German sales leader, said its European sales in July rose 24.4 percent, to 226,882 units, with the help of a 62.3 percent jump in German sales.

The company, which produces the VW, Audi and Seat brands, derived 56 percent of its total volume in its home market last month.

■ Fiat Group reported unchanged sales for the month of 165,674 units despite a doubling of its volume in Germany.

The Italian group continues to be weighed down by consumer defections in its home market, Europe's second largest, where its sales fell 13 percent last month.

Fiat's lost volume has gone primarily to VW and Ford, both of which have gained market share in Italy.

■ General Motors Europe sales rose 21.7 percent, to 146,380, buoyed by a 67.6 percent increase in Germany.

Sales there, by far its dominant market, accounted for 57 percent of the company's total volume last month.

■ Ford of Europe jumped 32 percent, to 138,897 units, with the boost of a 92 percent surge in German volume, to a record 50,850 units.

Reflecting the severe downturn in its home market, Ford sold four cars in Germany in July for every one it sold in Britain: 50,850 to 12,205.

For the seven months, Ford's British sales slid 27 percent, to 209,649 units, but jumped 59 percent in Germany, to 304,830.

■ France's Peugeot and Renault groups posted gains in July of 16.3 percent and 11.2 percent in Europe. The two automakers' sales rose 74.2 percent and 143.8 percent for the month in Germany.

Study predicts world sales will rise 50% in 20 years

ED WENDT
Staff Correspondent

LONDON — Worldwide vehicle sales, led by "explosive" growth in South Korea and Eastern Europe, will jump more than 50 percent in the next 20 years, according to a study released last week.

The report, *The World Market Strategic Review and Forecast Databook*, published by London-based Euromotor Reports and Pemberson Associates, says worldwide vehicle sales by the year 2010 will rise to 74.7 million units from the 49.3 million sold last year. Most of the rise will come as consumer incomes in the lesser-developed Asian and East European rise to levels that permit new-car purchases, says the company.

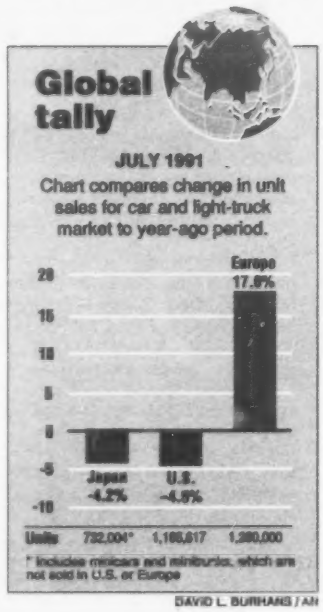
According to the projections, fully one-third of the increase, or about 8 million units, will be accounted for by newly developing markets in Asia. The South Korean market alone will rise to 3.4 million units a year by 2010 from 980,000 last year, the report says.

The forecast predicts that Asian vehicle sales will approach 12 million units in 2010, up almost 200 percent from 1990 levels.

Euromotor also foresees strong growth in Eastern Europe, where annual volume is expected to grow by 4.3 million units by 2010, compared with 4 million units in Western Europe.

Karl Ludvigsen, managing director of Euromotor Reports Ltd. and chairman of Ludvigsen Associates, called his projections a "conservative estimate" that would withstand even last week's political turmoil in the Soviet Union.

"The motor industry has survived this kind of upheaval we are seeing in Russia before," he said. "It's too important an industry for the Soviet Union to allow it to suffer tremendously."



DAVID L. BURHANS / AN

Ludvigsen described South Korea as a "powerhouse."

"Sales in South Korea will accelerate at such a rate that the national fleet will explode from 3.2 million in 1990 to 24.8 million in 2010, an expansion of 665 percent over the forecast period," he said.

The report considers China the next most important Asian market. It predicts sales there will total 2.6 million vehicles in 2010, up 243 percent from 1990. As in South Korea, it says, Chinese demand will be met chiefly by domestically-produced vehicles.

"Both countries will have immense demands for vehicle design and tooling services in the years ahead," said Ludvigsen.

Less-developed countries, the report predicts, will gain massively in importance as vehicle markets in the next 20 years. According to the report, they will experience a 153 percent rise in overall passenger-car demand and a 161 percent rise in commercial-vehicle sales.

"The outlook for 2010 is for more than one-third of the world's vehicle sales to be made in LDC nations," said Ludvigsen.

According to the report, vehicle demand in the less-developed countries lags the more-developed countries by up to 35 years. In 1960, it points out, the more-developed countries absorbed 13 million vehicles, a demand level the study predicts will be reached by the less-developed countries in 1995. In 2010, they will reach a demand level of 26 million vehicles, a level attained by the more-developed countries in 1975, says the study.

Ludvigsen warns vehicle manufacturers to "maintain and build their strategic positions in the LDCs, since by far the majority of the rising demand in the LDC nations will be met by local assembly and/or manufacture."

But car and truck sales in the more-developed countries will jump as well, the study says. From 1990 to 2010, it says, auto sales in the more-developed countries will jump 40 percent, while commercial vehicles will rise by 62 percent.

Ludvigsen said the "revived Eastern Europe" will become another rival of Western Europe. Eastern markets will grow 112 percent against 26.6 percent for the Western markets, he added.

GENE GORMAN
Presents:
"BACK TO BASICS"
A High Intensity 3 Day
"Sales Management Workshop"

Gene Gorman
"The Winning Edge"

This "highly acclaimed" mgt. course is a must for today's dealer, G.M. Sales Mgr., or Prospective Mgr. (Adaptable to any desk procedure)

Day One — "How to Get Business in the Door — Without Advertising"
Day Two — "Management in Action vs. Reaction"
Day Three — "The Comfort Zone" — how to get out of it.

GREAT MGR'S. ARE TRAINED — NOT BORN

Gene Gorman — "The Premier Automotive Sales and Mgt. Trainer for the 90's", will personally teach all who attend:

* How to increase closings and gross
* How to teach prospecting and follow-up
* How to control traffic — while keeping attitudes positive
* How and when to lease
* How to coach your sales team out of their comfort zone
* How to take a T.O. and make it a sale
* How to design your own daily mgt. action plan
* How to be an effective leader in all areas

PORSCHE

America Roadster joins 911 lineup

KRISTINE STIVEN BREESE
Staff Reporter

Most of Porsche Cars North America's attention for 1992 will be focused on the new 968 coupe. In addition to the 968, which replaces the 944, Porsche is offering a new limited-edition model, the 911 America Roadster.

INTRO-'92

There will also be minor changes to the 911 Carrera 2 and 4. The 911 Turbo and both 928 models will remain as is.

The 911 America Roadster gets its name from the 1952 limited-edition 356 America Roadster. It shares the same 3.6-liter, six-cylinder engine as the Carrera 2 and 4. The engine delivers 247 horsepower at 6,100 rpm and 228 pounds feet of torque at 4,800 rpm.

The car will resemble the 911 Turbo in many respects, although it won't have the huge fixed spoiler that dominates the rear of the Turbo. The suspension and brakes are shared with the Turbo. And its wide front and rear fenders and five-spoke wheels resemble the Turbo.

The Roadster will come with a five-speed transmission or the Tiptronic transmission, which allows clutchless manual shifting or automatic operation.

The $87,900 America Roadster will be sold in limited volume — "only a few hundred," according to a Porsche spokeswoman. It will be available only as a cabriolet. The car goes on sale in November.

Sales of the 911 America Roadster, priced at $87,900, will be limited to a "few hundred," Porsche officials say.

The Carrera 2 and 4 will get redesigned side-view mirrors and the new five-spoke, Turbo-design wheels as on the Roadster. The rear-wheel-drive and all-wheel-drive Carreras should be available before the Roadster "in early fall," according to the company.

Toyota regains lead in sales per dealer

Toyota lead all franchises in retail sales per dealer in July, displacing Honda. Toyota also led in April and May.

Nissan, in the fifth position, was the closest car-truck brand to Toyota. Saturn, which added 50 franchises in the first six months of this year, took the second position, followed by Infiniti and Honda, also car-only franchises.

July new-car sales were the strongest of the year on a seasonally adjusted basis, and that showed up in sales-per-dealer averages, which rose for many brands.

Between Jan. 1 and July 1, 29 makes lost dealers, 10 networks grew and four were unchanged.

COLOR

FROM PAGE 3

has their own idea of the trends.

Color trends are debated and discussed in spring and fall each year at an event called Color Marketing, when about 1,200 people gather from the design, product and fashion worlds.

According to White, participants basically agree on the trends, then go back to their own car companies, color studios or fashion houses and interpret them for their customers' needs.

"Fashion puts out the colors first," said White, followed several years later by cars. Consumers get used to the fashionable color palette, having seen it in clothes and furnishings, so they are ready for the new colors on automobiles several years later.

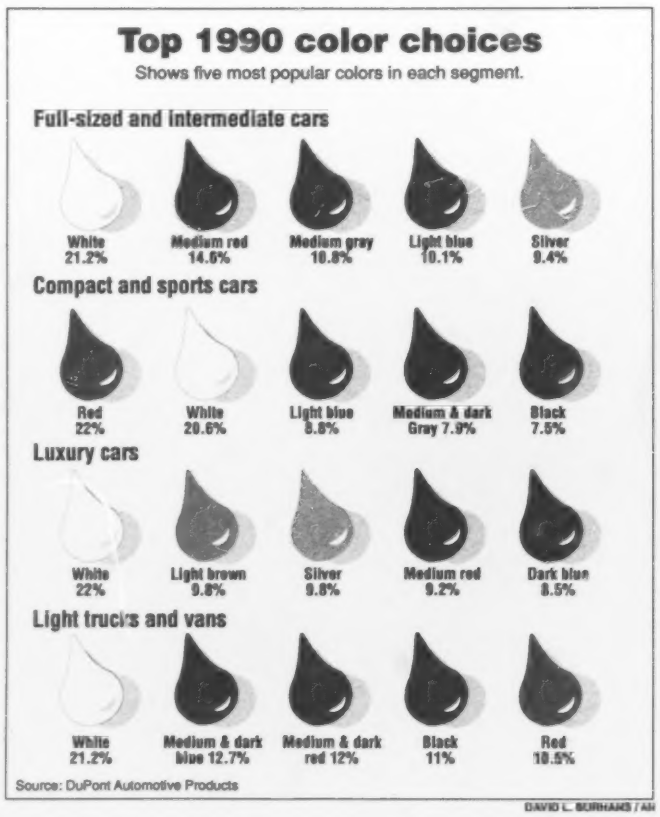
Jon Hall, chief color designer at BASF, disagreed completely: "That might have been true 10 years ago, but not now."

Hall said the color trend for cars is influenced by fashion, but that the arranged color palette is an old-fashioned idea.

Robert Daily, color marketing manager for DuPont automotive finishes, said Color Marketing affects fashion, but only informs auto paints.

Workshops at the group's meeting last spring in Dearborn, Mich., developed trend forecasts for 1993, but at that time the paint makers were putting final touches on their color offerings for the 1995 model year. Fashion, gift wrap and other industries with fast turn-around times can react almost immediately, Daily said, and "sometimes we see revolutionary things happen." But for durable automobiles and their long lead times, color trends tend to evolve slowly, and the sessions "substantiate, or unsubstantiate, what I've already done."

> The shapes (of cars) are going to be different in the '90s, more rounded, more aero, more sculpted, more stylized shapes. We'll see color more conducive to those shapes, generally lighter in value, brighter and cleaner, more chromatic.
>
> **Robert Daily**
> DuPont automotive finishes



DAVID L. BURHANS / AN

Brighter future

The three color gurus have different ways of arriving at their forecasts, but they see a similar future.

"The shapes (of cars) are going to be different in the '90s, more rounded, more aero, more sculpted, more stylized shapes. We'll see color more conducive to those shapes, generally lighter in value, brighter and cleaner, more chromatic," said Daily.

"There seems to be a resurgence of green right now, more in teal, aqua or jewel-type greens. Browns are down now, but may be back in the mid-'90s. A reddish beige or light tan has been popular in the luxury segment, but 'root beer' colors have not been very popular. The general trend is warmer, influenced by red."

PPG's White shared these thoughts:

"You'll see a lot of reds and blues and the influence of purple in the '90s. We've got a dark brown, 'tundra,' that's not a chocolate brown; it's a new color, brown with the influence of violet.

"And you're going to see green, because of the environment."

Hall sees the same ecological influence, and at his company's 1995 model year shows for automakers in Tokyo and Detroit, he predicted more "greens, golds and new kinds of brown" because of it. A parallel trend is the high-technology look that will show up as "flat black, brushed steel, the kinds of finishes you see on computers. It's more of a cold look, almost the opposite of the ecological influence."

Finally, Hall said, there is "an interest in color and fun things. Young people are consuming fluorescent, wild colors."

Colors that have fallen out of favor, said Hall and Daily, are gray metallic and silver metallic. Hall agreed that browns are at a low point now, but will come back.

"Tan has become an absence," said White. "We're going to see a new neutral type color: 'pebble,' 'eggshell.' We'll see silver with a second accent color in it."

The lime green on PPG's 1995 palette is an example of how a color moves through the consumer world. It is a bright neon hue that showed up several years ago on summer shorts worn by pre-teens, then moved to trim accents on such things as aftermarket windshield wiper air deflectors. A version was in the 1994 PPG collection, and a sample of the color on a piece of sheet metal will stay on the selection wall for 1995.

Fluorescent colors have been limited to pace cars, show cars and Formula One racers because they fade quickly in the sunlight, but White said PPG has a technical solution. She would not say whether any customer had chosen it.

It's a small world

The world of automotive paint color is small.

"It's a non-union, clique sort of group," said White. "Globally, it's a very small group," perhaps several hundred. Hall said there are seven or eight major paint companies in Europe, three or four in Japan as well as the three in the United States.

PPG, BASF and DuPont take their color shows to each of the automakers. Their color experts participate in allied events, like Design Saturday, an October New York show for interior designers, and Neocon, a June show held in conjunction with the Chicago Furniture Mart.

Confidentiality is a given in the industry. But the paint companies call on the same customers, buy from the same pigment makers, and attend the same conferences, so word on trends naturally gets around and the industry's rhythms are broadly known.

"Almost everybody has their '95 show done," said Stan Novinski, global manager for industrial products at The Mearl Corp., a supplier of pearlescent pigments to the paint industry worldwide.

"There's a lot of pressure to bring advanced methods ahead" and speed up the introduction of new paints, said Novinski.

Daily said DuPont is not inclined to put untested colors and techniques in the color shows, because the car designers get too excited and want the new color now.

White said it takes 2½ years for colors to reach cars in the Big 3, because paint makers, independent pigment makers and all the suppliers for the interiors have to crank up and coordinate their efforts.

The delay can be as much as five years if new technology is involved, said Hall, because among other things, auto companies demand to know what happens to the paint after two years of exposure to Florida sunshine.

"It's rare that a color is bought right off the wall," said White. Carmakers want it a little bluer, or a little darker, or a little lighter, to match their choices for interiors and their visions for a car. "Color is still a creative portion of the design business," she said. "A great design isn't great enough until it has the right color on it."

And following several automakers who have opened West Coast design studios in trend-setting California, PPG Industries is preparing to open a color studio in Torrance, Calif.

The Big 3, most Japanese companies, Volkswagen, BMW and Mercedes-Benz have studios on the West Coast.

The PPG color studio will share space with other PPG offices and will report to White.

Technology can give a company an edge beyond the subtlety of designing a particular color to meet a trend. Both BASF and PPG are working on multi-hued colors called metamerics that look different in different lights.

Such paint would satisfy both the ecological and the high-tech trends, said Hall: "It's an effect that occurs in nature, and it can be manufactured, as in a hologram."

High-tech colors

DuPont is experimenting with photochromic colors that change in sunlight, and thermachromic colors that change with heat. It has also worked with bicolored pearly colors, but Daily said they don't usually look good on large surfaces, like car fenders.

Besides bright, low-luster colors, PPG is working on dark colors that reflect sunlight and heat as well as white. Dark colors don't sell well in the South now because of heat buildup.

Japan's Nippon Paint Co. has developed a way to paint aluminum or composites using an electric charge in the metal that causes the pigment to hold a different angle than non-charged areas, letting a logo or other graphic device show up in a single color of paint.

At Mearl, chemists are studying silver-coated paint particles and optical features coming out of the money-printing industry.

Technological answers to environmental concerns are behind some color directions. Pigments with lead in them — some yellows, oranges and reds — have already been dropped by manufacturers.

U.S. assembly plants and paint lines have gone almost completely to paints called high-solids, which have more pigment. High solid paints can be applied with waterborne paint systems like that at the Saturn Corp. plant in Spring Hill, Tenn.

In standard paint booths, they can be applied with less of the volatile organic compounds used in carriers that add to air pollution when they evaporate, leaving the pigment behind.

Asian and European plants use more low-solid paints, which leave more pollution behind.

A red hot opportunity with Honda

Bright fluorescent paints are a particular challenge, because they fade in the sunlight.

Larry Shinoda, a Detroit car designer who has worked at General Motors and Ford Motor Co., tells this story:

Earlier this year he was in Tokyo with some people from Nippon Paint Co., a leading Japanese supplier. They were in a Ginza hostess club when Nobuhiko Kawamoto, president of Honda Motor Co., joined the group.

The suppliers naturally offered to do business with Honda, whose engines power the dominant McLaren-Honda Formula One cars.

"Yes, there is something you can do for us," said Kawamoto. "Make a Marlboro Red that's durable."

— William R. Diem

Color designers have visions of the future

Color designers get to see the insides of a lot of car studios, but they are sworn by contract and their sense of ethics to secrecy. But if they won't convey details, they will convey excitement.

Robert Daily, color marketing manager for DuPont Automotive Products, sees this future:

"There's a tremendous amount of enthusiasm at the different automotive design studios. Without exception, they have a lot of creative people, doing creative things, exciting things, new shapes to go along with the new technologies.

"Designs are going to be rounded, a sculpted look. It's a big departure from the boxy shapes.

"I think you're going to see niche markets open up for things like the (Pontiac) Stinger. Along with that, they want some niche colors."

How PPG showed its colors

PPG Industries' Marilyn White would not describe her company's 1995 paint show, but it is likely to adopt some ideas from the innovative 1994 Environomics show.

At each of a dozen basic color stations, painted exterior steel panels in varying shades of a color were displayed with fashion items, magazine clippings, automotive carpeting, bucket seats and painted wheels.

Suppliers Seton Co. (seat leather), Chatham Knitting Mills (seat cloth), and Asahi Motor Wheel and Masland Industries (carpet) worked with PPG color designers on the exhibit, and representatives followed it to auto companies around the world last year.

White said PPG has been asked by some U.S. and Japanese carmakers to arrange a color show for car dealers. The companies hope that if dealers are more aware of color options, they will order color more aggressively. "We're hoping it will happen," she said.

— William R. Diem

OUTLOOK

FROM PAGE 1

that the recession has ended even if economic growth remains anemic through next year.

But that doesn't mean auto sales will rebound soon. Auto analysts expect car sales to gradually strengthen. There could even be a slight surge in September and October if automakers offer more attractive incentives to clear out 1991 model inventories.

But volumes could sink in the fourth quarter if General Motors and Chrysler Corp. reduce their sales to fleets.

Last March, Ford and GM said they would lengthen the cycle that vehicles sold to daily rental companies stay in the fleets before being repurchased by the automakers. The program begins with 1992 vehicles. At Ford, the time spent in service has increased to six months or 15,000 miles, up from four months and no minimum mileage. GM is expected to adopt a similar program.

Though Chrysler never announced a plan to extend cycle time for daily rental cars, sources said the number of program cars for the 1992 model year will drop to 200,000 vehicles, down from 240,000 vehicles this model year.

"Chrysler and GM have been flooding the market with fleet sales to the rental car industry," said Jean Claude Gruet, analyst for New York-based UBS Securities. He says fleet sales constitute more than 25 percent of the market, with retail sales lagging behind. Hence if fleet sales soften in the fourth quarter, then automakers will need an improvement in retail sales to take up the slack.

But consumers are in a defensive posture. High levels of consumer debt, declines in real wage growth and disposable income, and unemployment at 6.7 percent have made them skittish.

"Real wage growth is needed to sustain a sales recovery," said Gruet. "For auto sales to rebound, the economy needs a stimulus and I don't know where that will come from."

Several analysts surveyed by *Automotive News* at the start of the year have adjusted their sales predictions downward for the calendar year. The spread between the nine analysts surveyed is now a low of 12.5 million car and truck sales in the United States to a high of 13.2 million. The high earlier in the year was an optimistic 13.9 million vehicles.

Analysts agree that Toyota, Honda and Mazda will finish the year with improved market share. "Toyota is the major automaker to gain share, but even Subaru's share is up moderately because of the company's aggressive marketing of the Legacy," said Michael Luckey, of New York-based Luckey Consulting Group.

Shares of the car market are expected to deteriorate for Chrysler Corp. and Ford Motor Co. Neither company will introduce major new models that could boost their sales. Analysts say GM's market share could strengthen.

In the light-truck market, analysts predict market shares at Chrysler and Toyota will advance while Ford and GM's shares will dip.

"Toyota, Nissan, Mitsubishi and Chrysler will see some improvement in the truck market, but there is really no sea changes going on in the truck market," said Maryann Keller, analyst with New York-based Furman Selz Inc.

"The Japanese will be the winners overall and specifically at Honda, Toyota and Mazda," she added.

The automakers are optimistic about the fourth quarter. Total Big 3 production for the fourth quarter is pegged at 2.5 million, up 15 percent from 2.1 million in the fourth quarter a year ago and a predicted 2.2 million in third quarter 1991. But automakers are always generous in their fourth quarter forecasts.

Chrysler is expected to produce 419,000 vehicles, up from 365,000 in the third quarter and 404,000 in the fourth quarter a year ago.

Ford plans to produce 849,000 vehicles, up from 798,000 in the third quarter and 728,500 in the fourth quarter a year ago.

GM projects it will produce 1.2 million vehicles, up from 1.1 million in the third quarter and 2.1 million in fourth quarter 1990.

'92 looks both half empty, half full, say dealers

DARRELL PRESSLEY
Special Correspondent

For every dealer who is bubbling with excitement about the upcoming 1992 model year, there is one who is stocking up on Alka-Seltzer in anticipation of another long year.

Skepticism by consumers on the stability of the economy, vehicle price increases and the resurgence of the used-car market have caused some dealers to be conservative in ordering 1992 vehicles.

Orders are 15 to 20 percent lower than last year at Kallis Ford-Chrysler in Belfast, Maine, said Terrell Whitney, general manager: "It doesn't look promising right now. I don't care what you put in front of them, the only ones who are buying are the ones that have to," and they are buying program cars, which has hurt new-car sales.

Program cars are sold to daily rental firms, then repurchased by automakers at guaranteed rates and redistributed to dealers through auctions.

And with no sure signs that the recession is over, dealers are concerned that the economy, as well as price increases, will have a big impact on sales.

"The price in and of itself is not the problem," said Frank Ursomarso, president of Union Park Pontiac-BMW-Honda-GMC Truck in Wilmington, Del. "If the consumer loses income, or is laid off, then their ability to pay decreases. The manufacturer who can offer value at the lowest price will come out ahead."

Even with price hikes, some 1992 models are expected to be hot items. Ursomarso said showroom traffic has increased and the dealership is ordering about 20 percent more units than last year. With restyled models like the Pontiac Bonneville and Grand Am, "we see the market improving," he said.

Automakers are optimistic about the 1992 model launch and hope the light at the end of the tunnel isn't coming from a train. Michael Grimaldi, general marketing manager at Oldsmobile, said, "We are seeing a rebound in sales during the summer, with this last month being even stronger. We are looking cautiously optimistically at the fall quarter, and expect sales to continue to strengthen well into the 1992 model year."

El Schlesinger, Pontiac general sales and service manager, said the redesigned Bonneville and Grand Am puts the division in "excellent position" going into the 1992 model year: "We're in decent shape — in fact we're in great shape to keep our production in place as we go through the fourth quarter."

James Reilly, president of Reilly Buick-GMC Truck Inc. in Colorado Springs, Colo., believes the new model year will bring a slight increase in sales: "We're not going to see a tremendous upturn in car sales. We might see two or three more cars sold a month."

As they decide what models to order and how many to keep in inventory, dealers are faced with the dilemma of trying to anticipate the desires of customers.

"People aren't catalog buyers like they used to be," said Reilly. "They come in and say, 'If you don't have it, I'm going to go down the street.' "

Dan Hatfield, vice president and general manager of Toyota West in Columbus, Ohio, said 1992 will be a very stable year for the auto industry, but he is still keeping his fingers crossed: "I probably wouldn't be in this position if I weren't an eternal optimist."

Ford will repair Tempo, Topaz fuel pumps for U.S. owners

KATHY JACKSON
Staff Reporter

Ford Motor Co. says it will extend fuel pump warranty coverage on the 601,000 1988 and 1989 Tempos and Topazes that have been sold in the United States, a move that could cost the automaker about $75 million.

Ford already faces a bill of approximately $9.3 million for the 52,000 Tempos and Topazes that customers have fixed on their own at an average cost of $180.

The program will extend coverage to five years or 50,000 miles, pay for future fuel pump failures, and reimburse consumers who have already paid for the repairs, Ford spokesman Mike Moran said.

Ford announced the program Friday, a day after the Center for Auto Safety wrote a letter to the FTC. The letter from the Washington-based consumer watchdog group urged the FTC to force Ford to implement a program similar to the one that was announced earlier this month in Canada. In that program, Ford of Canada agreed to pay for fuel pump failures on the two models and to extend warranty coverage on the part.

> Ford said the letter from the consumer group had nothing to do with its actions.

Fuel pumps on Tempos and Topazes sold in Canada and the United States have been failing at a rate far higher than fuel pumps installed by other manufacturers.

Ford spokesman Mike Moran said the letter to the FTC from the consumer group had nothing to do with Ford's actions. Moran said Ford was conducting its own investigation and was prepared to satisfy customer complaints. "Our actions were moving quite far along prior to any letter," Moran said.

The association's executive director, Clarence Ditlow, remained critical. "It's a shame that it took public pressure to get Ford to do the right thing," Ditlow said. "That's why Ford is losing sales to the Japanese."

Admitting that the internal seal on the pump may wear prematurely, Ford of Canada on Aug. 13 agreed to pay for all past and future fuel pump failures on the 132,000 models sold in Canada. Ford of Canada also extended warranty coverage on the cars at a cost estimated between $11 million and $15 million.

Moran said the U.S. program will be similar to Canada's, but he didn't have all of the details. He said the failure rate in Canada may be 15 to 20 percent higher than it is in the United States because they use a more volatile fuel in Canada that could destroy the seal more quickly.

The cars are built by Ford at Kansas City, Mo., and Oakville, Ontario.

The pumps generally fail during very warm weather and cause the vehicles to stall. Some U.S. dealers say failure often occurs between 20,000 and 40,000 miles; some say they have replaced more than 100 pumps per year.

Pontiac adds rebates to '92s

Pontiac jumped into the 1992 model year incentive war last week by announcing consumer rebates on some of its vehicles.

Pontiac is paying buyers $500 on 1992 LeMans and 1992 Firebird and $750 on 1992 Grand Prix and 1992 Trans Sport.

Also, the car company expanded its current incentive program on 1991 vehicles: Grand Am and Trans Sport, $750; Firebird and Grand Prix, $1,000; and Bonneville, $1,500.

In lieu of rebates consumers may choose special financing rates of 4.9 percent to 10.9 percent, depending on the length of the contract.

Pontiac's incentive program on 1991 and 1992 vehicles will expire on Sept. 25.

Cadillac continues its 1991 model year clean-up with a factory-to-dealer incentive program on select cars.

Through Sept. 25, dealers earn $500 on 1991 DeVille, Fleetwood and Brougham.

CHRYSLER

FROM PAGE 1

and low interest financing incentives. Most recently, Ford Motor Co. abandoned all such incentives and opted to give its dealers the incentive money. But Ford capitulated in the face of consumer resistance and a weakening economy and returned to retail incentives.

Chrysler holds 44 percent of the U.S. minivan market. It is a market the company created in the 1984 model year but must increasingly defend against new domestic and import contenders. The minivan also is Chrysler's financial lifeline and the company desperately needs the money minivans generate to fund new product programs.

The five elements of the Ultimate Guarantee minivan program are a choice of warranties, "value" pricing, safety, security and resale value guarantees.

The Ultimate Guarantee program affects only 1992 minivan buyers, but Chrysler is revamping its warranty coverage for all of its 1992 vehicles, dealers said.

Buyers of 1992 Chrysler Corp. models may choose between two warranty programs that carry no deductibles, dealers said. No other manufacturer currently offers buyers a choice of coverage, dealers added.

Called the Owner's Choice Protection Plan, buyers may opt for three-year/36,000-mile bumper-to-bumper coverage with no deductible or for Chrysler's current seven-year/70,000-mile powertrain coverage.

The $100 deductible has been dropped for the seven-year/70,000-mile coverage. The seven-year/70,000-mile coverage includes bumper-to-bumper coverage with no deductible for the first 12 months/12,000 miles, just as 1991 warranties do.

Dealers had sought the three-year/36,000-mile coverage. General Motors, Ford Motor Co. and major Japanese and European makes will offer at least three-year/36,000-mile warranty coverage for 1992 and some have no deductible.

Chrysler will retain its Crystal Key warranty for luxury cars and the Chrysler Town & Country minivan. Crystal Key is bumper-to-bumper coverage for five years/50,000 miles with no deductible. Buyers are then covered with a seven-year/70,000-mile powertrain warranty. The $100 deductible on the seven-year/70,000-mile coverage will be dropped on 1992 models, dealers said.

Dealers said the Ultimate Guarantee program for 1992 minivans will include a resale value guarantee. If a Chrysler Corp. minivan buyer trades in the vehicle to a Chrysler dealer within four years of purchase, Chrysler will guarantee that the minivan's resale value will match or exceed the resale value of any minivan on the market, dealers said. The company has not yet provided dealers with details on how the resale value will be computed.

Along with the resale guarantee, Chrysler will promote a so-called "security guarantee." This feature will offer some type of roadside assistance plan, although dealers have been given only sketchy information.

In addition, a free cellular phone will be offered with a minivan purchase. Dealers said the free phone offer is expected to appeal to women buyers because the phones give them a sense of security.

The marketing campaign also will push safety. Chrysler will promote its minivan driver-side air bag, the availability of anti-lock brakes and optional child-safety seats that are integrated into minivan rear seats. The child safety seats are a new option in 1992.

In addition, Chrysler will promote heavily its Family Value minivan that was introduced in the 1991 model year. Dealers said the minivan will be advertised with a "pricing guarantee" as the best-priced minivan in the market, offered with an automatic transmission and air conditioning for a sticker of $14,500.

Dealers applauded the move, saying the program will give them the chance to maintain or even gain minivan market share.

Bricklin broke again

Chapter 7 filing lists $20 million in debts

CHARLES M. THOMAS
Staff Reporter

For the second time in a roller coaster career spanning more than two decades, flamboyant automotive entrepreneur Malcolm Bricklin has filed for personal-bankruptcy liquidation.

Bricklin's filing in Phoenix last week under Chapter 7 of the Bankruptcy Code listed less than $50,000 in assets, more than 150 creditors and claims totaling nearly $20 million, said his attorney, James LaGanke.

Bricklin previously filed under Chapter 7 in 1975 in Phoenix after his Bricklin car venture failed.

The new filing "will wipe the slate clean" and allow Bricklin to proceed with plans for a chain of "auto ranches" selling rebuilt cars, LaGanke said.

Bricklin, 52, said in a statement last week, "I am reluctantly taking this action to resolve my present financial problems . . . which primarily arose out of Global Motors' default on its contractual obligations to me."

Bricklin sold his interests in Global, importer of the Yugo from Yugoslavia, in 1988 to an investment firm for $15 million to $20 million. Global later filed for bankruptcy court protection.

The biggest liability listed by Bricklin is $17.3 million that a federal judge ordered him in June to pay to a couple for breach of contract. John and Rebecca Bednarik of Accokeek, Md., said they had invested $350,000 in a Bricklin venture in 1983 in exchange for U.S. Yugo distribution rights.

Two years ago he planned to create the first national dealership chain comprising 1,000 points. In typical Bricklin fashion, the linchpin for the chain was a "closing booth" — a mystical room that combined holograms and Disneyesque imagineering.

But he failed to gain the support of manufacturers for the venture.

Earlier this year, he announced yet another enterprise — a national chain of 50 used-car lots and remanufacturing centers to recondition vehicles.

Some of Bricklin's high-flying ventures have worked. He founded Subaru of America in 1968.

But several years later he launched a company to build a gull-wing sports car that ended in bankruptcy after a short production run. In 1983 he formed International Automobile Importers to import the Bertone X1/9 and Pininfarina Spider after Fiat pulled out of the U.S. market.

The two models never met Bricklin's sales expectations, nor did the dealer network ever reach the 1,000 he forecasted.

In 1984, Bricklin formed a company to import Yugos. He sold out in 1988 shortly before the financially troubled company laid off most of its corporate staff. The company is still struggling and trying to reorganize.

The Associated Press contributed to this report.

MORAN

FROM PAGE 4

for a capital loan — literally with tears in his eyes," Moran recalls in the letter. "We loaned him the money, which wound up being more than three times what he thought was the absolute maximum he needed."

But on the heels of Moran's letter, some dealers in the Southeast region received a three-page rebuttal signed "Anonymous — as I do not wish to evoke the wrath of Moran."

The letter questions why Moran would allow undercapitalized

After Moran's letter, some dealers received a rebuttal.

dealers to obtain Toyota franchises in the first place, unless "that same distributor was not proper or reputable and most definitely believed he could gain from the dealer's eventual demise."

The letter also chides Moran for criticizing the media for reporting news about the lawsuits and allegations that the company made improper political contributions in Florida.

"One only wonders," the anonymous letter reads, "how many more revelations will be discovered about this bully. Surely the press, the lawyers, the affected dealers, the current and former Southeast Toyota employees have more fuel to add to the fire. And just as surely, the value of the remaining Southeast Toyota dealerships continue to erode."

One North Carolina dealer, who asked not to be identified, said he agreed with Moran's claim that most of the suits against Southeast Toyota are being brought by dealers who "didn't run their businesses right."

Another North Carolina dealer, who also asked not to be identified, said that similar anonymous letters criticizing Moran have circulated in recent years.

An Alabama Toyota dealer who received both letters said he tended to agree with the anonymous letter more than Moran's.

Build rises as plants make '92s

ANNE E. WRIGHT
Chief Statistician

Car and truck production in the United States and Canada continues to climb as more plants return from model changeover and begin producing 1992 vehicles. To date, 95 percent of the production facilities have completed changeover.

Ford Motor Co.'s Lorain, Ohio, truck facility is down this week and is expected to begin Job 1 on Sept. 3.

General Motors' Lansing, Mich., B plant and Wilmington, Del., car facilities are down for model changeover and are expected to begin building 1992 models in early September. The Flint, Mich., truck facility will be down for major retooling to prepare for full-sized van production in the fall of 1992. The plant currently produces the Chevrolet Blazer and Suburban and the GMC Jimmy and Suburban.

Four transplant manufacturers are still producing 1991 models: Nissan Motor Manufacturing Corp. U.S.A.; Subaru-Isuzu Automotive Inc.; Toyota Motor Manufacturing U.S.A. Inc.; and Volvo.

This week's estimated car and truck build is 213,715, up 1.43 percent over the prior week but 2.34 percent below the year-ago week.

Year-to-date, total vehicle production in the United States and Canada is 6,761,863, trailing 1990 by 13.52 percent.

U.S. and Canada estimated car production last week was 124,216, virtually even with the previous week and down 1.85 percent below the year-ago week. So far this year, 4,133,890 cars have been assembled, 11.28 percent behind 1990.

Truck production in the United States and Canada was estimated at 89,499 last week, an increase of 3.20 percent over the prior week and down 3.00 percent from the year-ago week. Year-to-date, truck production remains 16.81 percent behind 1990.

Chrysler Corp. scheduled two eight-hour overtime shifts last Saturday at the Warren, Mich., truck plant.

Ford plans daily overtime next week at car plants in Atlanta and St. Thomas, Ontario; and at truck plants in Kansas City, Mo.; Louisville, Ky.; and St. Louis.

GM worked two shifts of overtime last Saturday at the Baltimore truck plant.

GM also idled the Allante line at the Detroit-Hamtramck, Mich., plant. The downtime is due to a holiday in Italy, where the Allante body is built.

■ **NEW TABLE:** The production table inaugurates a new format this week. It is designed to reflect an integrated look by manufacturer at car and truck production in the United States and Canada.

Comments concerning the new format can be mailed to the Automotive News Data Center at 1400 Woodbridge, Detroit, MI 48207 or faxed to (313) 446-0383.

Fast-paced Japanese hit the expansion redline

MARY ANN MASKERY
Staff Reporter

TOKYO — Japan's automakers, long thought to be as invincible as one of Norman Schwarzkopf's armored columns, are starting to look vulnerable these days as they face a growing list of major problems at home and abroad.

After five years of breakneck growth, a period that provided both the funds and confidence to expand worldwide, the industry has run up against a brick wall of limitations that few could have foreseen even one year ago. They include:

- A growing labor shortage at home, affecting everything from production scheduling to capital spending. To woo reluctant youths into their plants, companies must increasingly turn to part-time work, flexible hours and such amenities as dormitories and first-rate restaurants.
- Mounting union and environmentalist opposition to the industry's vaunted short product cycle, a pillar of its competitiveness. Opponents charge the industry with wasting resources.
- Disruptive traffic congestion at home, affecting both the industry's vaunted just-in-time delivery system and sales. So severe has the country's traffic snarl become that a certified proof of parking space must be shown before a car may be registered.
- A sharp rise in the cost of capital funds, the lifeblood of expansion and modernization. Companies, which paid for their last decade's expansion with money borrowed at 1 percent to 1.5 percent, are now drawing down cash reserves to avoid rates that have soared above 8 percent.

Stock offerings, another traditional source of financing, have been shut off by a year-long bloodbath on the Tokyo Stock Exchange, off 35 percent in the past year.

- Rising protectionist sentiments abroad, dampening both export sales and direct plant investment.
- Weak sales in the home market,

Dealers whack TV ad spending

NEW YORK — Car dealers and manufacturers trimmed their first half TV ad spending by more than $250 million from a year earlier. Total 1991 TV ad spending through June totaled $1.43 billion.

The Television Bureau of Advertising said car dealers cut spending on local TV by 22 percent to $111.9 million in the period. Manufacturers' network spending declined 17 percent to $741.4 million, and auto spending on the spot market was off 11 percent to $572.3 million.

Figures are based on Arbitron data in the 75 largest TV markets.

Mazda ads tease launch of new cars

IRVINE, Calif. — Mazda Motor of America Inc. began a teaser advertising campaign Sept. 1 to preface what it terms the "most expansive new model launch in the company's history."

The campaign includes seven 15-second commercials urging viewers to watch TV Sept. 22 when the "New Mazda" will be revealed on network and Fox TV.

Spots for the MX-3 sports coupe and 929 luxury sedan open with shrouded cars. Viewers are given a glimpse of the MX-3 as the shroud waves gently in the wind.

In the 929 spots, the shroud falls from the car just as the camera's view becomes obstructed.

The 929 and MX-3 are the first of five new models Mazda plans to introduce over the next nine months. The other three are the

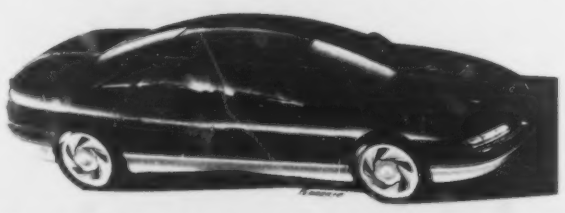
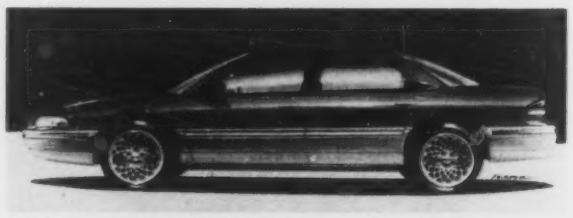
The first official look at the 1993 Dodge Intrepid shows a family resemblance to Viper, especially the grille and head lamps; Intrepid goes into production next summer.

Chrysler christens '93 LH triplets



Tires on all LH models including this Eagle Vision are pushed to the edges of the sheet metal to create an aggressive stance.



Cab-forward design allows the Chrysler Concorde's doors to be significantly wider than those of most sedans.

Chrysler Corp. has named three mid-sized sedans it will introduce in the 1993 model year: Chrysler Concorde, Dodge Intrepid and Eagle Vision.

Production begins in June 1992 at Chrysler's Bramalea, Ontario, plant. The assembly plant will shut down Dec. 6 for model changeover; it currently produces the Dodge Monaco and Eagle Premier, which will be discontinued.

The new line of sedans, codenamed LH, display Chrysler's cab-forward design philosophy, which moves the leading edge of the windshield forward, over the engine compartment.

The vehicles will feature a new Chrysler-built 3.5-liter, 24-valve V-6 engine, electronic traction control, anti-lock brakes and standard driver- and passenger-side air bags.

Chrysler tries new marketing for old line

MARY CONNELLY
Staff Reporter

HIGHLAND PARK, Mich. — Chrysler Corp. will try to get customers to trade in their vehicles sooner with a new financing program that combines the low monthly payments of leasing with the advantage of car ownership.

Chrysler announced several innovative marketing programs last week at a 1992-model introduction that was short on new products and long on new approaches to attract buyers.

The Gold Key Plus program begins Oct. 1 on all new 1991 and 1992 models. Under the program, buyers will make a downpayment of at least 5 percent and will own the vehicle. Chrysler pre-sets a residual value for the end of a 24- to 48-month contract cycle.

Other new marketing or financing programs confirmed by Chrysler include:

- The Ultimate Guarantee for buyers of 1992 minivans during the fourth quarter of 1991: A guarantee of a Chrysler trade-in value within 48 months at least as high as competitive minivans, a choice of warranties, a roadside assistance plan and a free car phone. Buyers can opt for the program instead of any retail incentives.
- A choice on all Chrysler vehicles of the company's traditional seven-year/70,000-mile powertrain warranty combined with the 12-month bumper-to-bumper warranty, or a new three-year bumper-to-bumper warranty. Chrysler has eliminated deductibles. Advertising for 1992-models will hammer home the uniqueness of the choice.

Chrysler introduced only one all-new vehicle last week: The Mitsubishi-built Eagle Summit wagon/Plymouth Colt Vista, a five-pas-

Hyundai hopes to improve image with Elantra freebies

KRISTINE STIVEN BREESE
Staff Reporter

CARMEL, Calif. — In an attempt to ease consumer fears about owning its cars, Hyundai Motor America will pay for all maintenance and repairs on its 1992 Elantra for two years/24,000 miles.

The program, called Value Care, begins wher

goes on sale next month. If it works, Hyundai could spread the plan to its other three models.

"We have to overcome the perceived risk of buying a Hyundai product," said Tom Ryan, vice president of marketing. "Our research shows that we are better than the perception. Image is our [illegible] problem."

The move is one of a series of programs aimed at rebuilding the importer. Despite the addition of the Sonata and Scoupe models, Hyundai's annual sales have dropped nearly 50 percent since 1988. The company's 1991 unit sales were off 15.0 percent through July.

Under the Value Care program, Hyundai says it will pick up the tab for virtually any needed repair or maintenance. That includes oil changes, filters, fluid changes, wipers, brake shoes, tires, spark plugs and tune-ups.

The program comes in addition to Hyundai's three-year/36,000-mile bumper-to-bumper warranty.

Johnson: in Tokyo

Kurylko: in Frankfurt

2 reporters move overseas

Two key *Automotive News* reporters have been reassigned to overseas posts by Editor Peter Brown.

Richard Johnson, 37, who has been Europe editor in Frankfurt since 1985, was named Asia editor. He joins Mary Ann Maskery, Tokyo bureau chief.

Diana Kurylko, 35, a Washington bureau reporter for three years, succeeds Johnson in Frankfurt.

Johnson joined *Automotive News* in 1984 and covered Ford Motor Co. and the former American Motors before being transferred to Europe. A native of Michigan, he graduated from Oakland University with a degree in English.

Kurylko, a native of New Jersey, joined *Automotive News* in 1988. A Rutgers University graduate, she is a past president of the Washington Automotive Press Association.

Mazda readies new RX-7

Mazda will unveil an RX-7 replacement at the Tokyo auto show in October, but prototypes have been touring Germany's Nurburgring track. The new model features more rounded styling but is about the same size as the current RX-7. Power will come from a rotary engine, a turbocharged version expected to produce 200 horsepower. A U.S. debut is slated for spring.

RX-7, 626 and MX-6.

The campaign was developed in conjunction with Mazda's advertising agency, Foote, Cone & Belding in Orange County, Calif.

Ford recalls Probes, Festivas for emissions

DEARBORN, Mich. — Ford Motor Co. is recalling about 26,000 of its 1990 Probe models equipped with 3.0-liter V-6 engines to check exhaust emissions levels.

Dealers may have to install a new engine control module in some of the cars. Models built for California are not included.

Ford is also recalling about 20,400 of its 1988 and 1989 Festivas with 1.3-liter four-cylinder engines and manual transmissions built for California. Dealers will replace the exhaust gas recirculation valve. Ford said the current valve may incorrectly activate an indicator to service the emissions control system.

Volvo, Renault report second-quarter losses

NEW YORK — AB Volvo reported its pre-tax profit plummeted 74.3 percent in the second quarter, to about $40.7 million (258 million Swedish kronor).

Separately, Volvo's partner, Renault SA, announced its pre-tax operating profit sank 65.4 percent in the second quarter, to $161.9 million (962 million francs).

Volvo's year-old plan to cut overhead by $473 million has had some effect already and will be fully felt in the second half, the company said.

AB Volvo and Renault SA are tied by a series of cross-shareholdings.

Yugo ad account up for review

NEW YORK — Yugo America announced it is putting its advertising account up for review.

Yugo expects its present agency, Frankfurt Gips Balkind, to be among the agencies to pitch the account in the review that begins this week, said Tim Stone, Yugo national sales manager. Annual ad billings are $7 million to $9 million.

Toyota operating profit dips 22% for fiscal year

TOKYO — Toyota Motor Corp. said last week that operating profit from worldwide operations for the fiscal year ended June 30 fell 22.3 percent from a year earlier, to the equivalent of $3.6 billion. The dip reflected increased research spending and higher costs for personnel and depreciation, Toyota said.

Sales rose 7.2 percent, to $71.4 billion, the company said.

Toyota said unconsolidated operating income, which includes only parent-company results, slid 37.1 percent, to $2.4 billion. But net income for the year fell only 2.2 percent, to $3.1 billion.

Toyota said it produced 4.1 million vehicles in Japan last year, an increase of 1.9 percent. The company said it hopes to meet a target of 4.3 million this fiscal year. But company executives said a possible slowdown in the domestic market and uncertain conditions in key export markets could affect results.

Infiniti up 4.4%; Q45 now $42,000

CARSON, Calif. — Infiniti, the luxury-car division of Nissan Motor Corp. in U.S.A., has raised prices an average of 4.4 percent on its 1992 models.

The 1992 prices are: G20 four-door sedan, $18,300, up $550; M30 coupe, $25,000, up $500; M30 convertible, $33,000, up $2,000; and Q45 four-door sedan, $42,000, up $2000.

The destination charge remains at $385 on the 1992 models.

Prices of 1992 Nissan, Lexus and Suzuki models are on Page 33.

Autolatina moves Fox to Argentina plant

SAO PAULO, Brazil — Autolatina, the joint venture between Ford Motor Co. and Volkswagen AG, said last week it will concentrate production of several four-door models in Argentina while its Brazilian operation focuses on coupes.

Production of the U.S.-bound VW Fox, sold here as the Voyage sedan, will shift to Argentina next year. Autolatina already builds the four-door Ford Escort in Argentina.

Five finalists named in Amati agency search

LOS ANGELES — Two ad agencies jilted in recent romances with automakers are looking for true love this time with Amati, the newly announced luxury division of Mazda Motor of America Inc. Three fresh faces are at the dance, too, hoping to win the $50 million account.

Amati's five finalists are: Della Femina, McNamee/WCRS, which recently lost the American Isuzu Motors Inc. account; Lord, Dentsu and Partners, which handled Peugeot Motors of America Inc. business until Peugeot pulled out of the market last month; Foote, Cone & Belding, whose branch in Irvine, Calif., handles the Mazda Motor of America account; Jordan, McGrath, Case and Taylor; and Tatham/R.S.C.G.

The Amati is scheduled to be introduced in the spring of 1994.

BMW names Stofer to top U.S. finance post

NEW YORK — BMW of North America Inc. named Wolfgang Stofer, 47, its new chief financial officer last week. He replaces Klaus-Christian Penner, 42, who became a senior planner in the Finance Group at parent company BMW AG.

Stofer was most recently chief financial officer for BMW Italy. He joined BMW in 1978, after serving as an auditor for Touche-Ross in Europe.

briefly

Zap! Video games topple Toyota

After seven years as the best publicly traded company in Japan, **Toyota Motor Corp.** this year fell to third. Nintendo Co., a video game maker, and 7-Eleven Japan Co., a chain of convenience stores, deposed the carmaker. The business newspaper *Nihon Keizai Shimbun* ranked companies by size, efficiency, shareholders' equity ratio and profitability. Toyota profits fell this year.

THE GREAT ESCAPE — No offense, but **Hyundai's** marketing vice president, Tom Ryan, doesn't like Motown. At a press event last week he said that during 20 years with **Ford Motor Co.** he tried to avoid assignments in Detroit, but he was sent there every time he got promoted. So he tried to escape when he joined Michelin Tire Corp. for four years, moving to Greenville, S.C., but the tire giant wanted to move him to Detroit, too. So, now he's with Hyundai . . . where the only transfers are to Seoul.

WELCOME TO THE CLUB — J. Davis Illingworth Jr., vice president and general manager of the **Lexus** division at **Toyota Motor Sales U.S.A. Inc.**, said last week he wishes **Mazda Motor of America Inc.** well in launching the new Amati second channel, but Illingworth said he is glad Lexus is almost finished with the formative stage: "If it were two years ago and I had to go through launching a division again, well . . . My advice to them is to buy plenty of aspirin, because they're going to have a lot of headaches."

Illingworth: Take two aspirin.

MUSEUM QUALITY — **Mercedes-Benz** last week built the last of its current S-class line, ending an 11-year run of 892,123 cars. The last of the current series, a black pearl 560SEC, went straight to the Mercedes museum in Stuttgart, Germany. The series has been replaced by a bigger, heavier and more expensive family.

WHO GOT EDUCATED —**Chevrolet** last week inaugurated the newly relocated Detroit Press Club in the city's Renaissance Center. The occasion: General Manager Jim Perkins' announcement of a partnership between Chevrolet and Apple Computers Inc. called Driving for Education. In an exhibit directly across from the Press Club entrance, for all to ogle as they poured into and out of the Chevy conference, stood an exhibit of **Ford Motor Co.** products.

ROUGH WATERS —Great Britain's anti-import factions can't count on this way to beat imports back to the sea. *Autocar & Motor* reported that two Japanese ships bound for England ran into another one at the Straits of Gibraltar. The accident cost **Toyota** 3,424 cars and **Mazda** 1,156 vans.

NAME GAME —Maybe you've heard it. Ever since **Mazda Motor of America Inc.** announced the name of its 1994 luxury car, scoffers have been scoffing: **"Amati? What a *strange* name for an automobile!"** We aren't trying to tell Mazda how to respond to those jibes, but we can think of three equally strange names that have been applied to luxury cars in recent years. **Acura. Lexus. Infiniti.**

Postwar Middle East is boom market for Big 3

BOB DeMAYER
Special Correspondent

Vehicle sales are soft in North America, but the expected postwar boom in the Middle East is well under way.

In the drive to meet postwar demand, the Big 3 shipped 2½ times as many vehicles to the Persian Gulf market in the first half of this year as they did in the first half of 1990, according to data compiled by the Motor Vehicle Manufacturers Association.

The Big 3 shipped 37,996 cars and trucks to the Persian Gulf region in the first half of the year compared to 14,903 in the first half of 1990 — the period immediately before Saddam Hussein's Iraqi army invaded Kuwait. General Motors accounted for 72 percent of the shipments this year and 75 percent last year.

Chrysler Corp. did not begin began shipments to the region until December 1990.

The six countries that form the Persian Gulf market, also known as the Gulf Cooperative Council, are Bahrain, Kuwait, Omar, Qatar, Saudi Arabia and the United Arab Emirates.

General Motors increased shipments to Kuwait, in particular, to replace vehicles destroyed and stolen during the Persian Gulf war, according to GM spokesman John Pekarek.

"In Kuwait, our sales this half were above and beyond normal," said Pekarek. "After the war ended, there was a better and more positive attitude, which helped increase our sales to the other Middle Eastern countries."

The Chevrolet Caprice sedan and the GMC Suburban are GM's best-selling car and truck in the Middle East.

According to the MVMA, GM shipped 27,526 cars and trucks to the Middle East in the first half of 1991, compared to 11,262 in the first half of 1990.

Ford's most popular cars in the Middle East are the Ford Crown Victoria and the Mercury Grand Marquis, according to Ford spokeswoman Lin Cummins.

Cummins said Ford's increase in shipments to the Middle East this year was due to postwar spending, inventory replacement for Kuwaiti dealers, inventory building by dealers in other countries and a Ford effort to increase Gulf market penetration.

Sales momentum in the region has grown steadily since the end of February, when

NO RUSH

Iacocca quashes talk he's got one foot out the door

MARY CONNELLY

ROCHESTER HILLS, Mich. — Chrysler Corp. Chairman Lee Iacocca signaled last week that he is unlikely to retire soon.

In fact, Iacocca suggested that the Chrysler board of directors will be "deliberating all next year" about who will succeed him.

Iacocca's impromptu remarks to reporters were made at a dealership dedication ceremony in Rochester Hills, Mich.

Asked how long he will stay at the Chrysler helm, Iacocca, who will be 67 in October, said, "I don't know. 'Til things turn around."

Then in a joking manner, he said, "As soon as you get to be 65, they speculate you're going to drop dead. I'm really 64. Print that. I got a couple years to go."

The tenor of Iacocca's remarks made it clear that he is not in any hurry to hand over the chairmanship. There has been incessant speculation at Chrysler about when Iacocca might step down or name a successor. Iacocca has done little to clarify the issue.

Detroit was abuzz this summer with word that Chrysler was looking outside the company for a possible Iacocca successor. But the company has neither confirmed the report nor supplied the names of possible candidates.

New ads, dealership benefits ➤ 4

Chrysler President Robert Lutz and Vice Chairman Robert S. Miller Jr. are considered the primary internal contenders.

Iacocca has a strong incentive to remain at Chrysler beyond 1991. Under his contract, Chrysler will give him 62,500 shares of common stock for every quarter he works after Jan. 1, 1992. The contract expires Dec. 31, 1991, but in June 1990 Iacocca signed an agreement with the Chrysler board that allows him to remain as chairman indefinitely and gives him the shares.

Iacocca's comments last week that he will remain chairman until good times return indicate he will

Chrysler Chairman Lee Iacocca made a rare public appearance last week to help Dodge dealer Tony Viviano lay the cornerstone for his new $4 million store in Rochester Hills, Mich.

Tired of being isolated in a trailer away from people and press, Iacocca said to Viviano, "Come on, let's go meet your family and friends."

Viviano's sons Sal and Nino will manage the new 25,000-square-foot Metropolitan Dodge facility.

"This investment is like a little shot in the arm for the car business," said the elder Viviano.

— *William R. Diem*

Germans, Swedes first to tap Baltic markets

Automotive News Staff

The newly sovereign Baltic states of Estonia, Latvia and Lithuania are emerging as a potential market where some German and Swedish automakers are already doing business while U.S. makers wait on the sidelines.

Virtually all automakers continue to profess caution toward the Baltic states and other segments of the disintegrating Soviet Union despite widespread diplomatic recognition of the three nations with a combined population of nearly 8 million.

Primary industry concerns are the lack of hard currencies to pay for vehicles and the lack of economic infrastructures to support sales and service operations. Some proposed ventures are now on hold.

Volkswagen AG seems to have the best toehold in Lithuania, the southernmost Baltic nation. A few German VW dealers have been exporting new cars, mostly Golfs, to that country for years.

W.P. Schmidt, Volkswagen export director, says, "They now sell a few hundred cars altogether, and some even print instruction manuals in the local language and have been sending instructors to train local mechanics."

Saab-Scania AB began exporting trucks to Estonia a year ago, and to date has sold some 30 heavy-duty trucks to an Estonian long-haul transport company with its own service facilities.

Volvo Truck Corp. is scheduled to open its own authorized truck service facility in Tallinn, Estonia, this month. The company said it definitely plans to expand its presence there. Volvo Truck's exports to the Baltics went from zero in 1988 to about 40 units in 1990.

Volvo Car Corp. sells about 50 cars a year in the Baltic countries.

Saab Automobile AB was contacted by an Estonian car importer when the liberation movement started in 1990. A Saab spokesman said the talks were interrupted, but the climate again seems favorable.

Chrysler Corp. President Robert Lutz last week said the massive changes under way in the Soviet Union and the Eastern Bloc will create vast new markets, fueling an economic boom which may overturn the notion that growth in the industrialized world is peaking. Lutz declined comment on Chrysler's plans in the Baltic region.

MARTHA GRATTAN / DAVID L. BURHANS / AN

But Chrysler Chairman Lee Iacocca did indicate that "nothing came of" the company's discussions with the Soviet government about a possible venture to modernize a minivan assembly plant on the Baltic coast. Discussions, begun in 1988, focused on the possible modernization of the RAF factory in Riga, Latvia, which produces an 11-passenger minibus (RAF-2203) and derivatives primarily used as medical ambulances, and as fire protection and traffic control vehicles.

"We were invited by the old regime," Iacocca said. "I don't know who we would go back to see this time."

Richard M. Lee, executive-in-charge of General Motors' international export sales, said it's still too early to tell what business opportunities there will be in the Baltic states and the other newly independent states.

"From a long-term perspective, there are some very significant signs that those markets are going to open up eventually and, in terms of volume growth, could represent

Isuzu prepares to crank up Rodeo output

LINDSAY CHAPPELL
Staff Reporter

American Isuzu Motors Inc. is banking on a surge in Rodeo sales this year to clear production from an expanded U.S. assembly plant.

Isuzu's U.S. factory is about to pump up the volume on the sport-utility to about 60,000 a year, or 5,000 a month. That's almost twice the volume that Isuzu dealers have managed to sell so far in the Rodeo's best month.

Sales are brisk for the Rodeo, introduced in 1990, the company reports. But in its best-selling month to date, June 1991, the Rodeo posted 2,775 sales. If that level held for 12 months, it would amount to about 33,000 sales a year — or 26,000 less than what Subaru-Isuzu Automotive Inc. now plans to build.

"The Rodeo is selling better every month," said Susan Cain, a spokeswoman for American Isuzu. "We have high hopes for it."

The increase in volume is the result of a $65-million expansion at the Subaru-Isuzu factory in Lafayette, Ind. That expansion was originally slated to boost Isuzu's output as well as its partner's, Fuji Heavy Industries Ltd.

Fuji manufacturers the Subaru

Car-truck sales dive 11.3% in mid-August

JIM HENRY
Staff Reporter

New-vehicle sales fell 11.3 percent to 302,214 cars and light trucks in mid-August. The dip was slightly less than the 13.2 percent decline for the year to date.

Car sales were down 10.7 percent, and light trucks were 12.4 percent below the year-ago period. In mid-August 1990, sales were down a modest 4.6 percent despite the crisis in the Middle East that led to the Persian Gulf war.

Mid-August sales were mixed for the leading Japanese firms. Sales rose 5.8 percent for American Honda Motor Co. Inc. Acura sales declined 5.1 percent, but Honda climbed 8.1 percent. Nissan Motor Corp. in U.S.A. (Nissan/Infiniti) shot up 11.1 percent. Toyota Motor Sales U.S.A Inc. (Toyota/Lexus) was off 16.4 percent.

Combined Big 3 sales of domestic and imported cars and trucks were down 15.3 percent. Chrysler Corp. sales were off an estimated 18.6 percent, as every division trailed last year. Ford Motor Co. sales fell 15.4 percent, although Mercury was up 52.5 percent.

General Motors sales declined 14.2 percent. As in early August, Buick and Oldsmobile were the only divisions to post a gain. Nevertheless, GM sold more vehicles than Ford and Chrysler combined.

Automotive News estimates 10-day sales for Chrysler and for most imports. There were eight selling days in mid-August both years.

Head injuries 'possible' for drivers of Civic, Suzuki Sidekick

WASHINGTON — Drivers of the Honda Civic and the Suzuki Sidekick could suffer "possible" serious head injuries in a 35-mph crash, the government says.

The Sidekick front-seat passenger also could suffer "possible" serious head injury, according to the latest round of crashes in the National Highway Traffic Safety Administration's New Car Assessment Program.

Three other vehicles — the Isuzu Stylus, Nissan Stanza, and Nissan 300ZX — all had head scores well below the 1,000 threshold. The scores indicate that serious head injury is "unlikely," according to NHTSA. Passenger scores on the Stylus and Stanza also were in the "unlikely" range; data for passengers was not available on the 300ZX.

NHTSA crashed 32 vehicles in the 1991 model year. Also included in its bank of results are "projected scores" of 57 other vehicles that were crashed in previous years and that haven't been since redesigned.

Of 15 subcompacts crashed, the Civic was among three that scored in the "possible" serious head-injury range for drivers. The four-door Sidekick was one of seven sport-utilities with head-injury scores above the 1,000 threshold. But the four-door Sidekick had the highest passenger head-injury score among 12 sport-utilities crashed: 2,017.

In a statement, Suzuki noted that its vehicles comply with federal safety rules and that "NHTSA has not demonstrated a relationship between NCAP tests and a broad variety of real world driving conditions.

"As NHTSA makes it clear in its report, the NCAP results are not a basis for determining if a vehicle is safe," Suzuki said. "Minor variations in test procedures can result in significantly different test results."

A Honda spokeswoman said the Civic had "significantly better head-injury scores" in Honda's own tests.

The Audi 100 has the lowest driver head-injury score of all 89 vehicles: 185. The Ford Taurus had the lowest passenger head-injury score: 258. Both are intermediate cars. The highest driver score was for the Chevrolet G20 van: 3,665. The highest passenger score belonged to the Jeep Comanche pickup: 2,700.

NHTSA performs the crashes as a "consumer information" program. Vehicles meet federal safety standards at 30 mph. The agency says comparisons should be made among vehicles in the same weight range.

Environmental messages to get more play in ads

RAYMOND SERAFIN
Crain News Service

Safety, one of the key ad themes for automakers, may soon be joined by environmental messages.

General Motors will gradually integrate into its advertising information about progress on environmental issues, said Marina v.N. Whitman, vice president of the Public Affairs and Marketing Group.

"The concern about environmental impact is coming," she said, adding that now "it's not quite at the same stage as safety demands in customer terms."

Whitman said political questions about "green" issues are causing a marketplace problem, largely because U.S. automakers haven't done enough to explain their environmental efforts to the public.

"People are getting concerned about environmental issues," she said, "and that's why it's important to close this perception gap — to get the facts out about our emissions reduction leadership, our leadership in electric cars, about all the work we're doing on alternative fuels."

The political problem stems from Detroit's long history of knocking heads with Washington lawmakers over such regulatory issues as fuel economy, emissions, safety and recyclability — all potentially costly issues for the industry as it tries to pull itself out of a financially draining sales slump.

"Detroit has a lot of credibility problems because they complain about how things can't be done, and then the Japanese or the Europeans do them and create an image of being more technically advanced," said Stanley Plog, chairman of Plog Research, a marketing consulting firm.

"It would be hard to trace how many sales it costs Detroit, but it doesn't help if people have a negative attitude about you," he said. "You come across as anti-environmental at a time when everyone likes to think of themselves as environmentalists."

GM tends to be a lightning rod for social critics because of its size, said Thomas O'Grady, president of Integrated Automotive Resources, a marketing consulting firm. That goes back at least to the 1960s, when Ralph Nader earned his reputation as a consumer crusader by taking on GM on safety issues.

MIDDLE EAST

FROM PAGE 3

the hostilities ended.

Since July, when Ford resumed shipments to Kuwait, it has shipped 1,200 new products there, including the Ford Explorer sport-utility. This is the first time the Explorer has been exported to Kuwait, according to Cummins.

In October, Ford plans to start shipping 1992 Ford Tempo, Mercury Topaz and Ford Taurus models to the region, Cummins said.

Ford shipped 5,303 cars and trucks to the Middle East during the first half of this year compared to 3,449 in the first half of 1990.

For all of 1989, Ford shipped more than 9,500 cars to the Middle East, according to Cummins. In 1990, that dropped to fewer than 7,400.

The Jeep Cherokee is the best-selling Chrysler vehicle in the Middle East, according to Chrysler spokeswoman Karen Stewart.

Saudi Arabia is the largest Middle Eastern market for Chrysler.

Chrysler shipped 5,167 cars and trucks to the Middle East during the first half of 1991 compared to 192 in December of 1990, its first month in the market.

Nissan prices rise 3.4%; Lexus, Suzuki also climb

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — The approach of the 1992 model year brought announcements of price increases last week from Nissan Motor Co. in U.S.A., Lexus Division of Toyota Motor Sales U.S.A. Inc. and American Suzuki Motor Corp.

Nissan hiked its 1992 cars and trucks an average of $450, or 3.4 percent on a sales-weighted basis. It was the first of the major Japanese makes to disclose its 1992 prices.

Nissan's cheapest model, the Sentra E two-door, jumped 2.5 percent, from $8,290 to $8,495. That $205 hike was the smallest of those posted last week. Others ranged from $210 on the NX 1600 coupe to $1,245 on the Stanza GXE four-door sedan.

The Maxima sedans went up $320 apiece.

On the sporty side, the 240SX coupes and hatchbacks went up $425 to $555. Pathfinder sport-utility vehicles rose $630 to $775 for 1992.

Prices of the Nissan 300ZX will be announced Oct. 7, and pickup truck stickers will be disclosed Sept. 16.

The new Lexus ES300 sedan, the division's entry-level car, is priced $3,750 higher than the ES250, which it replaces.

The ES300 offers better performance and more room and is priced at $25,250 with a five-speed manual transmission and $26,150 with automatic.

Another new Lexus, the SC300 coupe, is $31,100 with five-speed and $32,000 with automatic. The flagship LS400 is up $3,200, at $42,200. The leather interior package is standard; it was $1,400 extra for 1991.

Suzuki's lowest-priced sport-utility, the Samurai, climbed above $6,000 for 1992. The base model is $6,299, up $300, but the four-wheel-drive Samurai was cut $100.

The Sidekick sport-utilities are up $200 to $700.

The Suzuki Swift three-door hatchbacks went up $200, and so did the base four-door sedan. The GS sedan rose $500.

IACOCCA

FROM PAGE 3

be at the helm well into next year. Chrysler expects 1992 to mark a reversal in its declining fortunes.

Early in the year, the company will launch the 1993 Jeep Grand Cherokee, which it hopes will strengthen its position in the four-door sport-utility market.

Next fall, Chrysler's crucial line of LH mid-sized sedans bows. The sedans ride on Chrysler's first new car platform since 1980 and are vital to the company's quest to regain car market share.

Iacocca said he expects the new products to be introduced during an upturn in the automotive sales cycle. Although Iacocca was an early doomsayer when he predicted the current recession, he sounded optimistic last week, suggesting that U.S.-Canada car and truck sales will reach "15 million units or better" in 1992.

Iacocca also indicated that Chrysler is likely to continue its cost-cutting beyond the $3 billion reduction it is now trying to reach. "I expect volumes and margins to pick up and costs are down. That's a recipe for a banner year," he said about 1992.

Chrysler will need the heftier margins of its new products. Its cash crunch is not likely to abate in 1991.

In fact, Iacocca said last week that the company by "a close call" opted to issue 56 million new shares of common stock to avoid a further downgrading of the company's credit by rating agencies. The public offering consists of 33 million new shares; 23 million shares will be contributed to Chrysler's under-funded pension plan.

Iacocca said the share offering, which is intended to raise an estimated $400 million, was not made to avoid tapping into the company's $1.75 billion line of bank credit.

He said the equity offering was made "strictly to shore up the credit ratings and make sure they don't downgrade us one more time."

Major rating agencies downgraded the long-term debt of Chrysler and Chrysler Financial Corp., the company's financial services subsidiary, to junk bond status early this year.

Iacocca will begin peddling the new shares next week.

He said Chrysler will host 50 to 75 of the company's top institutional investors Tuesday. In addition to hearing the chairman's upbeat forecast, investors will test drive future products at the company's Chelsea, Mich., proving grounds.

BALTIC

FROM PAGE 3

some significant markets," Lee said. "It's just really a question of how soon and what has to happen before all that starts to fall into place. There's quite a little bit of infrastructure that has to be repaired and built."

Lee said the Baltic states seem to starting from a base level farther back than from where countries such as Poland and Czechoslovakia started, although the Baltic nations do have seaports and proximity to Western Europe.

Lee: too early to tell

A Ford Motor Co. spokeswoman in Dearborn said Ford is monitoring developments in the Soviet Union, saying it is too early to tell if there is any market potential in the three Baltic republics.

There is a Ford dealership in Estonia, owned by the Soviet Union, which pays hard currency for vehicles. There is also a Ford dealership in the Ukraine and service centers in Leningrad and Moscow.

Before the Putsch, Ford had plans to sell 1,000 vehicles in the Soviet Union. "We are watching it on a day-to-day basis," the Ford spokeswoman said.

Support for economic and technical aid from Western democracies was mushrooming last week after President George Bush and British Prime Minister John Major huddled in Maine. But the hesitancy of major Western nations to clearly define a modern-day Marshall Plan for the region has left huge question marks about the fate of the auto industry there.

The failed Soviet coup d'etat and ongoing independence movement by Soviet republics have likely enhanced auto industry opportunities in the region, said Philip Wylie, the leading industry analyst for Salomon Brothers in London.

But Wylie warned that a total break up of the Soviet Union could lead to chaos and major setbacks in current and future investments by vehicle manufacturers.

Most European analysts seem to agree that some sort of "economic union" similar to the European common market will likely evolve. Garel Rhys, professor of motor industry economics at Cardiff Business School, said the failed coup sent a loud message to Western automakers that their investments are now much safer in the region.

"The generals have thrown their dice and lost," said the professor. "The communist hardliners are out and the generals have been told in the Soviet Union to leave alone the satellite countries," said Rhys.

Salomon's Wylie said manufacturers should not be overly worried about their investments in the Soviet region. "It may be a very difficult situation," he said, "but I think it will eventually be resolved.

"These investments that have been made in Eastern Europe haven't been made with a short-term goal," Wylie said. "It has all been done with a fairly long payback period. As a result, they are prepared to wait for the turnaround which is coming.

"It is not going to be until 1995 when we see the growth really starting to come through," he said.

Rhys warned investors not to abandon the industry. "They should not be frightened," he said. "I think they should pause for a moment, but not run and scatter."

Staff Reporters Mary Connelly, Phil Frame and Charles M. Thomas in Detroit and Staff Correspondent Stig Bjorklund in Sweden contributed to this report.

ISUZU

FROM PAGE 3

Legacy at the plant and is a 51-percent partner in the venture. But Fuji opted not to expand Legacy production.

As a result, Rodeo production will grow from 150 units a day currently to 247 a day by December, giving Isuzu about 23,000 more Rodeos a year. Legacy production will remain at 250 a day, or 60,000 a year.

The expansion will also increase Isuzu's pickup production by about 8,000 units annually to about 32,000, bringing Isuzu's total share of the plant's output to 92,000 units a year.

"We've been waiting for the marketing guys to tell us to let it rip," Rick McKinnon, vice president of manufacturing at the plant, said of the new expansion. "I hope we're reading it right and aren't premature."

Plans originally called for Subaru and Isuzu to divide plant output equally.

American Isuzu has no plans to export the Rodeo, beyond a few hundred units that are now going to Canada and Puerto Rico.

The factory expansion follows almost two years of political bickering between Subaru-Isuzu and the state of Indiana.

The venture was originally supposed to expand from producing 120,000 units a year to 240,000, according to its 1986 "memorandum of understanding" with the state. Indiana committed about $84 million in state incentives to help build the plant.

But when plant officials said that the first expansion would only be an intermediate one, boosting production to about 170,000 units a year, state officials questioned whether the agreement had been violated.

The newly completed expansion was recently funded by leveraged-lease financing through the Indiana Development Finance Authority, a public agency. The arrangement allowed the car and truck maker to enter into a sale and lease-back of the $65 million in equipment.

But a plant spokeswoman said that Subaru-Isuzu has still not received approximately $8.8 million in state funding the company is counting on to train additional employees.

She said that discussions are still under way between the manufacturer and the state about the training funds.

The spokeswoman said that about 40 employees had been trained without the state funds, and that another 100 temporary production workers had been added to plant's 1,900-member work force.

Meanwhile, there are still no plans to expand production of the Subaru Legacy. In March of this year, Isamu Kawai, president of Subaru's parent company, Fuji Heavy Industries Ltd., visited the plant to determine whether that operation should be expanded along with Isuzu's.

Plans call for the plant to reach a capacity of 240,000 vehicles a year by 1993, of which Subaru would get 120,000.

The expansion also creates an overcapacity issue for the transplant. The expansion gives Subaru-Isuzu a production capacity of 170,000 vehicles a year. All production plans combined bring the partners to a little over 152,000 vehicles a year — a shortfall of 18,000 units.

Infiniti rewards dealers; Sterling offers $11,000 rebate

ARLENA SAWYERS and LIZ PINTO
Staff Reporters

Infiniti, the luxury car division of Nissan Motor Corp. in U.S.A., continues to stress customer satisfaction via a program that awards cash to dealers with high customer satifaction ratings.

Also, Ford Motor Co. announced customer rebates on some 1992 vehicles last week, and Peugeot Motors of America Inc. and Sterling Motor Cars are offering generous factory-to-dealer incentives to help clear out the last of their inventory in this country.

Infiniti dealers report that they are paid a cash incentive based on how well they meet volume and customer satisfaction objectives set by the division. They must achieve a customer satisfaction rating of at least 95 points (out of 100) to qualify for the bonus. Payments range up to $5,000 per car sold. The program extends through September and includes all 1991 Infiniti cars except the M30 convertible.

Infiniti would not discuss the program, but a spokeswoman acknowledged that the division has a cash program to "reward the dealers who are doing what we set out to do."

Susan Jacobs of Jacobs Automotive, an automotive consultant firm in Little Falls, N.J., said the incentive program parallels Infiniti's main focus, customer satisfaction.

"When your main focus is 'the customer,' you have to have a way, as manufacturer, to communicate that goal to your dealers and make it pay for them to meet customer satisfaction standards," Jacobs said.

"The risk with aggressive dealer incentives is that the quality of customer service will decline with dealers maximizing the benefit of high sales volume. The Infiniti program ensures that the reputation Infiniti has built on customer satisfaction will not suffer from an aggressive dealer incentive program."

Dealers agree that it is important to keep Infiniti's reputation as a customer-oriented manufacturer intact while increasing sales.

Frank Moyed, general sales manager for Shen Infiniti in San Mateo, Calif., praised the customer satisfaction-based incentive program.

"To get money back, we have to sell cars the right way — with satisfied customers. If they are satisfied, we benefit too," Moyed said.

"I think that's an excellent way to work incentives — to think about the customer first."

Ford Motor Co. has added several 1992 vehicles to its buyer-incentive program. The rebates range from $500 to $750 on Ford and Mercury cars and Ford trucks. In lieu of rebates, consumers may choose 7.9 percent financing for contacts up to 48 months.

Ford's 1991 rebate program is unchanged. Rebates on 1991 and 1992 vehicles expire Sept. 25.

Also, until Sept. 30, Ford is offering incentives on 1990 and 1991 F-series trucks purchased or leased by small companies that are ineligible for national fleet incentives and by the employees of those companies.

Small companies receive a rebate of $500 for buying or leasing two F-series trucks. If companies choose to lease rather than buy, only 1991 trucks are eligible. This program is in addition to other national rebates.

Sterling is paying its dealers $11,000 on all models until the supply is exhausted, dealers said.

Sales of the **Peugeot** 405 and 505 are netting dealers rebates of $5,000 and $6,000, respectively, dealers said. A Peugeot spokeswoman said the current program runs through June 1992, but acknowledged that "we may not have cars in June 1992."

Through Sept. 25, **Pontiac** is paying dealers $250 on sales of 1991 Grand Am models.

Special Correspondent Darrell Pressley contributed to this report.

Legacy (1991)	$1,200
XT, XT6 (1991)	$2,000

Chrysler debuted only one all-new 1992 vehicle: The Mitsubishi-built Eagle Summit wagon (pictured)/ Plymouth Colt Vista.

CHRYSLER

FROM PAGE 1

senger wagon that is a sort of mini-minivan. Chrysler executives did refer to a series of new vehicles that will hit the market beginning with the Jeep Grand Cherokee early next year.

Theodor Cunningham, Chrysler's executive vice president of sales and marketing, echoed the optimism for 1992 expressed earlier in the week by Chrysler Chairman Lee Iacocca.

"That means for '92, instead of thinking of the glass as half empty, we can now call it half full and rising," Cunningham told reporters. He said Chrysler last week asked dealers to increase orders 8 percent to reflect the future, rather than the poor sales of 1991. Through July, Chrysler's calendar-1991 car and truck sales were down 14.5 percent from the period in 1990.

Chrysler is taking some risk by guaranteeing residual values for car buyers. But Cunningham said the company has a database from more than six years of leasing programs and a good track record in predicting residuals.

Gold Key Plus is designed to shorten the vehicle trading cycle that has grown as consumers have financed purchases for 48 months or more. Chrysler would like the bulk of its Gold Key Plus users to have 24- and 36-month contracts.

Gold Key Plus monthly payments are based on the difference between the purchase price and the contract-ending fixed value.

At the end of the term, vehicle owners have four options:

- Return the vehicle and select a new Chrysler model financed under Gold Key Plus. Chrysler executives said they expect 45 to 50 percent of Gold Key Plus owners to chose that option.
- Refinance the vehicle, with no increase in monthly payments.
- Keep the vehicle by paying off the balance of the fixed value.
- Sell the vehicle and pay off the fixed value amount.

If the customer decides not to the keep the vehicle, ownership is transferred to Chrysler Credit Corp., the automaker's wholesale and retail financing arm.

The contract specifies that the returned vehicle must be in good condition. The customer is billed eight cents a mile for every mile over 15,000 a year.

John B. Damoose, Chrysler Corp. vice president of marketing, said the program offers customers "the best of both worlds."

Jeremiah E. Farrell, president of Chrysler Credit, said about 20 percent of financing applicants are choosing Gold Key Plus in tests in Minneapolis and Atlanta markets. Due to local laws, the program won't be offered in Ohio, Pennsylvania, Hawaii or Washington, D.C.

Union seeks caveats to trade deal

LIZ PINTO
Staff Reporter

DETROIT — Union leaders and their political allies fear that fast-track authority for the Bush administration to negotiate a free-trade agreement with Mexico will put American jobs on the fast track south of the border.

Sen. Donald Riegle, D-Mich., spoke to a coalition of union representatives and an audience of union members at the UAW Solidarity House in Detroit last week. He was seeking support for his proposal to change Senate rules on debating the proposed treaty.

His proposal would allow amendments to be made to any free-trade agreement brought before the Senate for ratification.

Under existing Senate rules, debate under fast-track is limited to 20 hours, without allowance for any amendments to the agreement. Congress in May voted to give President Bush fast-track authority to negotiate the treaty.

But a bill introduced by Riegle and backed by nine other senators would allow amendments in five areas: fair labor standards, environmental controls, fair rules of origin, dispute settlements and adjustment assistance for displaced U.S. workers. It would also allow up to 15 days of debate.

"If this free-trade agreement goes into effect without addressing these issues, it will be like a huge green flashing light that says, 'Shut down your plant in the U.S. and move it to Mexico where workers will work for about 60 cents an hour, where there are no environmental laws, where there is exploitation of child labor.' And then we are going to see unemployment here grow even higher," Riegle said.

Proponents of a free-trade deal among Mexico, Canada and the United States argue that each country would benefit from the elimination of tariffs.

UAW President Owen Bieber also addressed the group. He said the Bush administration wanted to get the Mexican trade deal "done fast — debate it, win it, and move it out before the 1992 election. Sen. Riegle's resolution gives us a way to make sure the free-trade agreement addresses key environmental and labor concerns."

Output tale: Trucks up; cars down

BOB DeMAYER
Special Correspondent

All car and truck assembly plants in the United States are down today in observance of Labor Day.

All assembly plants in Canada were closed last Friday and today for the holiday.

Last week's estimated car build in the United States and Canada was 122,058, down 2.0 percent from the prior week and down 16.3 percent from the year-ago week.

So far this year, 4,256,229 cars have been assembled in the two countries, 10.8 percent behind 1990.

Estimated truck production last week in the United States and Canada was 89,468, up 1.1 percent from the prior week but down 3.1 percent from the year-ago week. So far this year, truck production totals 2,716,479 in the two countries, down 16.4 percent from 1990.

Last week's estimated car and truck production in the United States and Canada was 211,526, down 1.0 percent from the prior week and down 11.2 percent from the year-ago week.

Year-to date, total vehicle production in the United States and Canada is 6,972,708, trailing 1990 by 13.1 percent.

U.S. automakers split last week's estimated production as follows: General Motors, 44.4 percent; Ford Motor Co., 19.4 percent; Chrysler Corp., 12.0 percent; Honda of America Manufacturing Inc., 9.5 percent; New United Motor Manufacturing Inc., 4.1 percent; Mazda Motor Manufacturing (USA) Corp., 3.4 percent; Diamond-Star Motors Corp., 3.2 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.7 percent; and Subaru-Isuzu Automotive Inc., 1.3 percent.

Toyota Motor Manufacturing U.S.A. Inc. was down last week for model changeover.

GM has scheduled no overtime this week.

Ford has scheduled daily overtime this week at its car plant in Atlanta and its truck plants in Kansas City, Mo.; Louisville, Ky.; and St. Louis. The Atlanta plant produces the Ford Taurus and Mercury Sable. The Kansas City plant makes F-series light trucks. The Louisville plant manufactures the Ford Explorer, Ford Ranger and Mazda Navajo. The St. Louis plant produces the Ford Aerostar.

Chrysler has scheduled two nine-hour daily shifts this week at three truck plants: St. Louis (No. 2); Warren, Mich.; and Toledo, Ohio.

The St. Louis plant produces the Chrysler Town & Country, Dodge Caravan C/V (extended cab), Dodge Grand Caravan and Plymouth Grand Voyager. The Warren plant makes the Dodge full-sized and mid-sized pickups. The Toledo plant produces the Jeep Cherokee, Comanche and Grand Wagoneer.

BMW regions get more power

NEW YORK — BMW of North America Inc. has told dealers that it is overhauling its operating structure to give regional offices more decision-making power.

The change will take effect Oct. 1 and will eliminate some positions at the U.S. headquarters in Woodcliff Lake, N.J., while adding others in BMW's four regional offices. BMW spokesman Thomas O. McGurn said BMW's U.S. employee count is expected to remain at about 870.

The four regional general managers will now report directly to Karl Gerlinger, president and chief executive officer. They had been reporting to Gerlinger's second-in-command, James J. Ryan, who will take over the company's eastern region. Ryan's position as vice president of automotive operations will be eliminated.

BMW will also create a new position, called an area manager, who will call on dealers in place of separate representatives for service, sales and parts.

BMW sent dealers a letter explaining the move on Friday.

EPA proposes emission monitors

WASHINGTON — The EPA on Friday issued a proposed rule that would require all cars and light trucks to be equipped with computer systems to monitor emission control equipment.

The rule would take effect in the 1994 model year. The systems would monitor such components as the catalytic converter and oxygen sensor and alert the driver if they needed to be checked.

The EPA said the proposed

Ex-managers cite bias at Southeast Toyota

LINDSAY CHAPPELL
Staff Reporter

JACKSONVILLE, Fla. — Charges of racial discrimination against dealers and dealer candidates have surfaced in the legal battle between dealers and Toyota Motor Sales U.S.A. Inc.'s Southeastern U.S. distributor.

In court depositions given for a string of lawsuits there, three former executives of Southeast Toyota Distributors Inc. claim that the privately held company practiced a policy of refusing blacks, Jewish people and others who wanted to become Toyota dealers.

The statements, which are disputed by the distributor, claim that the "unwritten policies of the company" prevented dealer recruiters from soliciting minority dealer candidates and granting them franchises during the 1980s.

Current Southeast Toyota officials dismiss the allegations as opinion and defend the company's record on minority dealers.

Lawrence Rich, executive vice president of J.M. Family Enterprises Inc., the Deerfield Beach, Fla., holding company that owns Southeast Toyota, said the company is trying to recruit its first black dealer.

He said there is a nationwide problem of minority dealers being under-capitalized.

"The last thing we want to do to [any] dealer is put them in a situation where they're undercapitalized or in a bad market or don't have the proper experience," Rich said. With "a lot of the failed dealers who are involved in this litigation, while they weren't minorities, there was a common thread, and it was undercapitalized bad management."

Lawyers are probing the possibility of racial discrimination in the discovery stages of about 12 lawsuits in Florida, Georgia, North Carolina, South Carolina and Alabama, the five states where Southeast operates. The suits accuse the distributor of racketeering and operating an unfair distribution system that punished dealers who didn't comply with its business demands. Racial discrimination is not a complaint in any of the suits.

Although Southeast is an independent distributor, the allegations of past discrimination there could prove to be an embarrassment to Toyota's politically sensitive U.S. operations. Toyota is currently conducting a national advertising campaign that spotlights such charitable deeds as paying for renovation of an elderly black woman's home in Washington, D.C.

There have been no black Toyota dealers in the Southeast region since it was established in

see SOUTHEAST, 41

Skylark incorporates bold sweeping lines and curves; the 1939 Buick inspired the vertical-bar grille.

The redesigned Camry features a more aerodynamic contour, suggestive of the high-end Lexus.

The 1992 Ford Taurus' overall length is increased 3.8 inches.

Sable has new sheet metal on every exterior panel except the roof.

New for '92: Skylark, Camry, Taurus, Sable

The wraps are off the redesigned 1992 Toyota Camry, Buick Skylark, Ford Taurus and Mercury Sable. Now it's up to buyers to signal a "thumbs up" and create 1992's stars.

Camry is bigger, more powerful and takes direct aim at the popular Honda Accord and Ford Taurus. The complete story appears on Page 40.

Meanwhile, Ford Motor Co. spent $615 million revamping Taurus and Sable, the cars' first redesign since their December 1985 introduction. See Page 16.

But Buick might be the biggest gambler, opting for the most radical styling of General Motors' N-bodies. See Page 6.

Clean air upstages battle of new cars at Frankfurt show

JAMES R. CRATE
International Editor

FRANKFURT, Germany — World carmakers' efforts to hammer environmental theology into working product will hold center stage this week in the cavernous *Messegelaende*, site of the biennial Frankfurt auto show.

So dominant is the green theme, analysts and industry insiders agree, that even the simultaneous launch of replacements for the two best-selling cars in the world, Volkswagen's Golf and General Motors' Astra, is likely to lose much of its thunder.

Indeed, even automakers that won't have concept vehicles at Europe's most important showcase for new auto technology will have to address the theme by noting the environmental friendliness of their existing lines through such measures as better fuel efficiency, better catalysts and improved recyclability.

VW claims its Chico gasoline-electric hybrid vehicle has a range of 250 miles. Story on Page 4.

Who follows Iacocca?

Chairman to help board pick successor

MARY CONNELLY
Staff Reporter

HIGHLAND PARK, Mich. — Lee Iacocca's departure from Chrysler Corp. at the end of 1992 may be anticlimactic because the company's evolution to a post-Iacocca era already has begun.

Iacocca ended months of speculation by announcing last week that he will step down as Chrysler chairman on Dec. 31, 1992.

The company said that in his remaining months at Chrysler, Iacocca will work with the board of directors to select a successor. Board discussions already have begun on who will succeed the legendary Chrysler chairman who will be 68 when he retires.

It is not clear if Iacocca will retain a role at Chrysler when he gives up the chairmanship. In the past he has suggested he may want to retain a seat on the board of directors.

Chrysler's announcement was an obvious attempt to squelch speculation about the company's future direction and shore up its efforts to sell 33 million new shares of common stock. Iacocca last week kicked off a multi-city trans-Atlantic tour to tout the company's prospects.

At the pinnacle of his national stature in the mid-1980s, Lee Ia-

ADP pulls software after FTC cries foul

The FTC is cracking down on a computer program used by thousands of new-car dealers that purports to show consumers how to save money by financing rather than plunking down cash for vehicles. Page 8.

Gates

Pinto

Staff changes announced

Max Gates has joined *Automotive News* as a staff reporter in the Washington bureau.

Gates, 46, is a native of Michigan, where he graduated from Albion College with a major in chemistry. He worked for 12 years as a reporter and editor for the *Ann Arbor News*. For the past three years, he has been the national science, medical and health correspondent in Washington for Newhouse Newspapers.

Gates replaces Diana Kurylko, who has been reassigned to the paper's Frankfurt bureau.

Automotive News also named Staff Reporter Liz Pinto to cover the labor beat, which includes organized labor, personnel and productivity.

She is based in Detroit and will add the labor beat to her duties as editor of the annual *Market Data Book* edition, which is published each May.

Pinto joined *Automotive News* in October 1990 from ITT Automotive of Auburn Hills, Mich. She is a Detroit native and has a bachelor's degree from Oakland University in Rochester Hills, Mich.

Breaking in a new breed of Mustang

Ford is conducting airflow tests on front end designs for the next generation Mustang, which could arrive for 1994 or 1995. This design, mounted on a current generation model, has the familiar horse emblem mounted in the center of a trapezoidal grille opening flanked by tapered headlights. An air intake is integrated below the bumper, while the front fenders are noticeably flared.

system would add about $94 to the cost of a new car and $101 to the cost of a light truck. But the agency says that the systems would yield improved repair and fuel economy over the life of the vehicle that would result in a net cost of $40 for new cars and $30 for trucks.

The rule is part of the EPA's implementation of the 1990 Clean Air Act. A date for a public hearing hasn't yet been set.

Ford hikes ad fee on program cars

ATLANTA — Ford dealers this year will be hit with higher costs to help pay for advertising programs.

In addition to the newly mandated 1 percent of sticker price that dealers will have to pay into local advertising associations for each new vehicle they order, Ford Division General Manager Ross Roberts says he will also increase the $50 advertising assessment that dealers pay into the ad fund when they buy program cars.

"The dealers probably won't like it," Roberts said of his plan to implement a higher assessment on program cars, "but I plan to raise it. We need the ad dollars."

Chrysler moves Adams to helm of Alfa in U.S.

ORLANDO, Fla. — Timothy R. Adams, who presided over the demise of Chrysler Corp.'s joint venture with Renault, has been named president of the Chrysler-Fiat operation that distributes Alfa Romeo cars in North America.

Adams succeeds Darrell Davis, who in August was named general sales manager for Chrysler's Western region.

Joseph S. Hannan Jr. last week was named chief operating officer of the Chrysler-Fiat joint venture company, which is called Alfa Romeo Distributors of North America. Hannan has been director of sales for the U.S. distributor since June 1989 and will continue in that position.

Adams, who joined Chrysler when the company purchased American Motors in 1987, was president of the Association of Renault and Chrysler for Automotive Development. The joint venture, which was terminated in August 1990, had planned to develop a small sport-utility.

Composites consortium patents technology

DETROIT — The composites consortium formed by Chrysler Corp., Ford Motor Co. and General Motors in 1988 has applied for two patents covering better ways to make plastic parts.

The new processes will be used to facilitate a consortium program called the Focal Project to build the structural front end of a car. The first patent covers a process used to combine several different types of materials into part reinforcements called "preforms."

The second patent involves a less costly method of making rigid, light-weight hollow cores. The consortium hopes to use the process for replacing heavier solid foam cores in molded parts.

Volvo-Japan plant eyes local content of 60-70%

TOKYO — The three-way joint venture among Mitsubishi Motors Corp., AB Volvo and the government of the Netherlands said it will begin production in the mid-1990s of cars with 60 to 70 percent European content, said Mitsubishi President Hirokazu Nakamura. To achieve that content, the cars will possibly use engines and transmissions made by Volvo's European partner, Renault, although Volvo or Mitsubishi also remain possible suppliers.

The venture will begin by Dec. 1, transforming Volvo Car BV into Netherlands Car BV.

Netherlands Car will supplant Volvo Car BV, building a new line at the existing plant to produce new models in equal shares for Volvo and Mitsubishi. The capacity goal is 200,000 cars in the 1.6-liter to 2.0-liter range.

Volvo will continue to produce its Volvo 400 cars on the old line.

Nissan enhances bumper recyclability

DETROIT — There is recyclable — and then there is recyclable.

Nissan Motor Co. Ltd. has been using propylene thermoplastic bumpers on its cars since 1979. Thermoplastics are more easily recycled than thermoset plastics. But the paint used on these bumpers contaminated the resin, creating a recyclable plastic of low value, poor appearance and reduced structural integrity.

The company has come up with a better paint removal system that pulverizes the bumper and dissolves and removes the paint with an aqueous solution.

Testing and plans are under way to begin installing bumpers made of recyclable materials on new Nissan vehicles.

Toyota seeks sales training edge

TORRANCE, Calif. — With the launch of the 1992 Camry, Toyota Motor Sales U.S.A. is offering its most ambitious sales training program.

Toyota says 12,000 salespersons will be exposed to a training program that brings the new Camry and competitive models to dealerships.

Training will consist of a new product presentation, a static evaluation, and a ride-and-drive of the Camry and competitors.

briefly

Ford execs tour to support '92s

Chrysler Corp. Chairman Lee Iacocca won't be the only auto executive taking his company's message on the road this year. Top **Ford Motor Co.** management, including Chairman Harold Poling, will cross the country this month, promoting Ford's cars and trucks the old fashioned way. "We've got to get out to where the grass roots are," said spokesman Gene Koch. "We don't have a new Thunderbird or sports car, but we're going to be the best damned sales people and sell what we got." The 75 senior Ford executives, accompanied by UAW officers, will hit 170 cities, visiting dealerships, mayors' offices, college campuses and supplier plants to tell the Ford story.

Koch says senior executives have never promoted new model cars to this extent.

"For years we sat here in Detroit and told people to hustle on down to the dealerships to see the new cars," Koch said, "but things have flipped over. The Japanese are out there, so we've got to go out there and sell Ford Motor Co."

MORE FAST TALK — Who is that engineer in the white coat? That was the buzz in an Atlanta conference room last week when so-called **Ford Motor Co.** engineer Leonard Johnson briefed the media and Ford executives on the 200 new features and 750 new parts on the 1992 Ford Taurus and **Mercury** Sable models. Johnson ripped through the changes at such a rapid, clear pace that some audience members whispered, "He should be in Hollywood." But Johnson turned out to be actor John Moschitta, best known as the fast-talking spokesman for Federal Express.

Ford spokesman John Spelich said that of the several Ford execs on hand, only four knew of the ruse.

"Everybody wanted to know who he was," Spelich said. "We were just trying to find a humorous way to illustrate the many new features on the cars."

NOT KITTY KELLY? — Doron P. Levin, Detroit bureau chief of *The New York Times,* is close to signing a deal with Harcourt Brace Jovanovich Inc. to write a book on the Lee Iacocca years at **Chrysler Corp.** Levin, who plans to write the Chrysler story during the next 18 months, said the book will focus on the company since its economic recovery. It will delve into the automotive industry's executive culture, competition with Japan, relationship with Washington and quest for revitalization. Levin, who quit *The Wall Street Journal* to write his 1989 book "Irreconcilable Differences: Ross Perot versus **General Motors**," plans to stay on the *Times* job while writing the Iacocca story.

THE GRASS IS ALWAYS GREENER — Automotive suppliers are getting a chance to see and feel the effects of their work with a new test drive program sponsored by **General Motors'** Lansing Automotive Division and Oldsmobile. Lansing Automotive, part of the **Buick-Oldsmobile-Cadillac** Group, engineers and builds GM's compact cars sold by Oldsmobile, Buick, **Pontiac** and **Chevrolet**.

The first vehicles in the test drive program were Oldsmobiles delivered to Prince Corp. of Holland, Mich., which supplies fabric headliners and other interior trim to Lansing Automotive. They were a Silhouette minivan, a Custom Cruiser station wagon and Eighty Eight and Ninety Eight sedans — none of which are built by Lansing Automotive. In fact, the Silhouette and Custom Cruiser aren't even built by B-O-C, but by the Chevrolet-Pontiac-Canada Group.

Ford Division needs trucks to stay No. 1

KATHY JACKSON
Staff Reporter

ATLANTA — Trucks will have to be the guiding light if Ford Division is to retain its title as national vehicle sales champ for the 1991 calendar year.

During a press unveiling of Ford's 1992 Taurus and Sable models, Ford Division General Manager Ross Roberts told *Automotive News* that he concedes the car race to crosstown rival Chevrolet.

"I don't think we'll catch them in the car lead," Roberts said, "but we'll beat them badly in trucks."

New Taurus, Sable ➤ 16

For the first eight months of the year, Ford trails Chevrolet in car sales by 90,566 units. Chevrolet had a 58,347 unit lead at the end of August last year.

Roberts thinks that a strong finish by trucks should leave Ford Division in first place in combined sales of cars and trucks for the calendar year.

"No question about it, we will beat Chevy in (combined) car and truck sales this year," Roberts predicts.

Through Aug. 31, Ford led Chevrolet in total vehicle sales by 14,991 units. Ford Division's truck sales totaled 802,308, compared to Chevrolet's 726,733. Chevrolet had sold 825,540 cars, and Ford, 734,974.

Roberts said slower sales of the Thunderbird and Escort hurt Ford Division in car sales. He said Crown Victoria had a slow start due to a new model introduction in March.

"The small car segment is where we're really having problems," Roberts said. "Chevy is putting a lot of emphasis and power in its small car group; Chevy is a strong marketing group; its product, style and quality has improved."

In an effort to put Ford Division back in the driver's seat in the car race for 1992, Roberts said the division will introduce innovative marketing programs on the Taurus and Escort models.

He said there will also be special programs for 1992 Ranger and F-series trucks.

"Those are the models that make our dealers money," he said. "We will focus on them."

The division banks on selling between 350,000 to 375,000 Taurus cars during 1992. Taurus is the most updated Ford Division vehicle for the new model year. Although the exterior looks virtually unchanged, Taurus features all new sheet metal and a fresh interior.

Chico shows VW answers on clean air

JAMES R. CRATE
International Editor

WOLFSBURG, Germany — Volkswagen AG last week showed reporters its new Chico concept car and other technology designed to sharply curtail emissions, demonstrating its readiness if car buyers get truly serious about the environment.

The Chico is a 2+2 hybrid-powered City Car prototype. It features constant-demand, fully automatic switchover between conventional power and electric drive in response to speed and throttle pressure. According to VW engineers, the hatchback mini, which will be formally unveiled at this week's Frankfurt auto show, has a top speed of 75 mph and a range of 250 miles.

Engineers also showed a catalyst-equipped, diesel-powered Eco-Golf sedan that could go into limited production in 1993. It features an automatic engine-shutoff-and-restart feature the company has been working on for several years.

Driven like the Chico through a clutchless five-speed manual transmission, the engine cuts out or restarts instantly in response to throttle pressure and speed. In tests over the past year, the car uses 22 percent less fuel than comparable Golfs not equipped with the inertia-drive system, VW officials say.

Other hardware VW showed reporters included its diesel-electric Golf featuring both fully automatic drive changeover and engine shutoff/restart, and a Jetta electric vehicle using sodium-sulphur batteries.

"We are very serious in the research department about the practicality of these concepts, but (production) is not our decision to make," said Heiko Barske, VW's executive director of research. "We must see what the market thinks."

The Chico has a tiny rear storage area, but space up front is ample.

AUTO SHUTOFF

VW's environmental research has been tightly focused on the twin goals of saving fuel and reducing emissions, Barske said. Much of that conceptual aim found its practical footing when VW researchers and engineers decided to push for, and developed, a way to switch engines off when not needed, and to smoothly put them back on line when power is needed.

"If you think about it, we don't need constant engine power for most of the driving we do. We're either coasting in slow traffic, or stopped with the engine running, wasting tremendous amounts of fuel," Barske said.

In tests, VW says the Eco-Golf engine shuts off and restarts an average of 66 times every 19 miles. Despite the down time, Eco-Golf's average speeds over the urban test circuit matched or exceeded those of standard Golfs.

A single clutch unit in the Eco-Golf controls the 1.6-liter diesel, shutting the engine off or restarting it in response to throttle pressure and gear-shift position. The engine stays engaged in first and reverse gears, to allow for parking and maneuvering.

VW researchers worked on the technology for several years before they were finally able to install it in practical fashion, Barske said last week.

"VW engineers are still working to overcome one barrier to widespread acceptance of the technology, however: because of their slower starting characteristics, gasoline engines are not readily suitable for on-off driving. One avenue being explored by VW engineers is the addition of a flywheel between engine and clutch unit. This would keep the engine rotating at the high rpms needed for faster starts."

Another drawback, that some drivers could be unsettled by loss of engine noise, could be overcome by equipping inertia/drive vehicles with sound simulators, engineers say.

A CITY CAR

With the Chico, Barske and his staff appear to have crafted a theme statement for their many ideas on the future of urban driving. Indeed, VW says the Chico could form the basis of an entirely new class of car.

Small (126 inches long, 64 inches wide), light (1,727 pounds) and fuel efficient, the hybrid nonetheless is stylish, roomy and practical. The prototype seats two adults comfortably in what VW says is a Golf-sized front compartment, and two small children in the back. A

New-truck prices rise as rules proliferate

JOSEPH BOHN
Truck Editor

A spate of governmental regulations could send light-truck prices spiraling in the 1990s.

Over the past decade, light trucks became a profitable 5-million-unit-a-year market.

Now, some industry officials privately fret that new standards, designed to bring trucks under the same safety regulations as cars, could undermine the market by pricing trucks too high.

An erosion of this market would be particularly devastating to domestic manufacturers since the Big 3 still have 79.4 percent of the light-truck market compared to only 58.9 percent of the car market, based on calendar year sales through August.

The exemption of light trucks from some key regulations such as side impact protection has helped hold prices down.

In 1989 the average new-truck transaction price was $300 less than for a car: $15,100 vs. $15,400, according to the National Automobile Dealers Association.

But that is changing rapidly.

New-truck prices rose faster than car prices in 1990 and are expected to continue doing so through the mid-1990s.

In 1990, truck deals were only $100 less, according to NADA surveys: $15,800 vs. $15,900.

For fall, Ford tagged the 1992 Econoline/Club Wagon with a 9.5 percent price hike. They are the first Ford trucks with an air bag, and they were designed to meet new regulations like Federal Motor Vehicle Safety Standard 208, which required more protection for light-truck occupants.

General Motors hasn't priced its

see RULES, 47

NHTSA RULES FOR LIGHT TRUCKS

1992 MODEL YEAR
FINAL RULES:
- FMVSS 102: Requires all gear positions be shown in one spot
- FMVSS 201: Allows 12 mph headform impact speed with air bags
- FMVSS 202: Requires head restraints
- FMVSS 204: Includes trucks up to 5,500 lbs. in steering column crash law
- FMVSS 205: Allows new types of plastic glazing with proper tests
- FMVSS 208: Requires rear outboard lap/shoulder belts; requires dynamic testing for manual front outboard seat belts; provides for removal of lap/shoulder belts with removable seats

FINAL RULE NOT YET ISSUED:
- FMVSS 207: Changes seat system test procedure

1993 MODEL YEAR
FINAL RULES:
- FMVSS 114: Provides for locking automatic transmissions with key removal
- FMVSS 118: Extends power window system requirements to all trucks
- FMVSS 210: Changes the minimum lap belt angle

FINAL RULE NOT YET ISSUED:
- FMVSS 108: Allows combination of center high-mounted stop and cargo lights
- FMVSS 208: Requires locking belt for child seat restraints throughout truck
- FMVSS 210: Expands the definition of a seat belt anchorage (Definition clarifying "seating reference point" still required)

1994 MODEL YEAR
FINAL RULES:
- FVMSS 108: Requires center high mounted stop lamp
- FMVSS 214: Requires side door strength
- FVMSS 216: Requires roof crush performance

FINAL RULE NOT YET ISSUED:
- FMVSS 210: Labels the people and weight truck carries and its tires

1995 MODEL YEAR
FINAL RULE:
- Begins air bag phase-in requirement; two bags per truck by 1999

RULES IN PROCESS
(No model year specified)
- FMVSS 101: Covers steering wheel mounted controls
- FMVSS 203: Revises, clarifies positioning of torso for compliance tests
- FMVSS 205: Permits wider use of glass plastic glazing
- FMVSS 209: Sets test requirements for retractor assemblies
- FMVSS 221: Governs school bus body strengths for under 10,000-lb. gvw
- ALTERNATE FUELS: Relates to fuel system integrity

JIM HENRY
Staff Reporter

NEW YORK — As disappointing as sales have been this year, at least the seasonally adjusted annual selling rate improved every month — until August. The August rate of 12.2 million vehicles was well below July's 13.5 million rate, reversing that one positive trend.

How bad is it? Going-out-of-business sales put Sterling Motor Cars and Peugeot Motors of America among the few big industry gainers for the month.

AUGUST SALES TABLES
August sales, by maker ➤ 44
Year-to-date, by maker ➤ 44
All trucks, by model ➤ 45
Domestic cars, by model ➤ 45

Sterling, which is offering dealer incentives up to $8,000 or zero-interest financing, nearly doubled sales for the year-ago month. And Peugeot sales rose 60.7 percent,

SALES

FROM PAGE 4

with dealer incentives of $5,000 to $6,000. Both companies announced last month they were ceasing U.S. imports.

As their star sets, another rises. Infiniti led all nameplates for the month with a gain of 148.3 percent, compared to slow year-ago sales.

Monthly unit sales were 1,047,469 cars and trucks, 10.9 percent below the year-ago month. And the year-ago month was a poor one, following the invasion of Kuwait by Iraq.

Year-to-date sales were 8,393,143, 13.2 percent behind the year-ago period.

■ BIG 3 DECLINE

Sales for the U.S. Big 3 declined 13.4 percent for August. General Motors Corp. fell 13.6 percent for the month, despite gains by Buick and Oldsmobile. Chevrolet/Geo sales were 17.5 percent below the year-ago month, although the Geo portion was up 2.9 percent.

Saturn sales of 7,000 were all plus for GM, there being no year-ago sales, but the figure was sharply down from July Saturn sales of 8,538.

Ford Division outsold Chevrolet/Geo for the top industry spot for the first time since March. Nevertheless, Ford Division sales were down 15.2 percent for the month, about the same as the Ford Motor Co. drop of 15.1 percent.

Chrysler Corp. sales dropped 8.9 percent for the month, but Chrysler's light trucks, including minivans, were up 7.5 percent. Light-truck sales rose for both Dodge and Plymouth and were just shy of even for Jeep.

For the truck market, Dodge, Plymouth and Mazda all gained a point or more of share, taking it mostly from Ford and Chevrolet.

■ JAPANESE GAIN SHARE

Sales for the Japanese nameplates were down 4.2 percent, contributing to another increase in market share. Japanese brands owned 29.7 percent of the car and light-truck market, up 2.1 points from a year earlier.

Besides Infiniti, nameplates that posted higher sales than the year-ago month included Honda, Mazda, Mitsubishi, Isuzu, Lexus and Suzuki.

Hyundai Motor America sales also improved, up 4.1 percent for the month.

Sales for American Honda Motor Co. Inc. jumped 3.7 percent in August, as Honda sales rose 4.6 percent and Acura fell 1.1 percent.

Monthly sales for Nissan Motor Corp. in USA fell only 0.3 percent, thanks to the momentum at Infiniti. Nissan Division sales were down 5.4 percent for the month.

Toyota Motor Sales USA Inc. vehicle sales were 15.2 percent below the year-ago month, but August 1990 was Toyota's best month of the year. Lexus sales were up 2.3 percent for the month, closely matching the pace for Lexus sales year to date.

Lexus outsold both Mercedes-Benz of North America and BMW of North America in August. BMW's August sales were 0.1 percent below the year-ago month, so BMW just missed posting its second month in a row with higher sales than the year-ago. BMW introduced a new 325i in June.

LUXURY

FROM PAGE 3

North America Inc. Those companies also must deal with the federal luxury tax on vehicles over $30,000.

Lotus' models include the Elan convertible, priced at $39,040, and Esprit Turbo SE, $86,750. Lotus is reportedly offering dealer incentives of $5,000 on each Elan, $11,000 on the Esprit Turbo and up to $15,000 on some specially equipped Esprit Turbos.

"It's particularly tough for a low-volume exotic," said Lotus spokesman Scott Sweeney. "When you sell automobiles as entertainment, as opposed to transportation — and without question a Lotus is not a necessity, it is a luxury — you're going to suffer if people let the economy dictate that decision."

Lotus' 1991 sales actually improved. For the January through July period, the company sold 218 units, compared with 156 in the same period last year. But Lotus had projected sales of 1,000 cars this year, relying on the addition of the new Elan convertible. The company later scaled back its sales estimate to about 600 units.

The other model it sells in the United States, the Esprit Turbo, was introduced in 1975 and restyled in 1988.

At the present sales rate, Lotus has enough 1991 models in U.S. stock to last through the 1992 model year. So the company is probably not going to introduce a new car until the 1993 model year, Sweeney said.

At Rolls-Royce, sales are down more than 50 percent this year. The company has cut its U.S. staff this year from about 100 to 70 through early retirements, a hiring freeze and layoffs.

New orders for Ferraris also are down, but retail deliveries are stable this year because Ferrari deliveries run so far behind orders. Ferarri spokesman Hugh Steward said 642 cars were delivered through August, about the same as last year, but the figure was inflated by a rush of orders last December to beat the luxury tax.

Martin Bennett of Thoroughbred Motorcars (Ferrari-Jaguar-Saab) in Nashville, Tenn., said the luxury tax turned Ferrari sales from "red-hot" to "very, very slow."

BUICK

FROM PAGE 3

the factory, Miller said.

"I think more dealers will fail and probably have failed, not because they don't have any money, but because they don't have the proper cash flow," Miller said. "I know several dealers who have gone out of business because they couldn't pay their employees because their money was held up in some type of program."

Dealers and Buick need to talk more about mandatory membership in ad associations, he said.

"I think there is a large number of dealers who feel that if they had the money to spend locally or directly on their business, they would be much more successful than being grouped together in a large organization," he said. "I have a tendency to agree with them. If I were able to take the amount of money I contribute to (my) local advertising organization and spend that directly . . . in my area, I think I could probably be a more effective voice."

Miller said he realizes that many dealers would disagree, particularly big city dealers who think they need the power of combined ad spending to make enough noise to be heard.

"Because dealers' feelings are all over the place and Buick management is really focused on having advertising associations, we have some uneasy feeling," he said.

Buick shouldn't eliminate ad associations if competitors continue to use them, Miller said. But if ad associations remain, there should be a way to require rental companies and fleets to pay into them also, he added.

The national dealer council meets at the end of this month to consider those and other issues. At the national meeting, a list of all concerns will be compiled and then pared to 20 or 25 key issues to present to management, he said.

Volvo adds spiffs, Porsche woos previous owners

ARLENA SAWYERS
Staff Reporter

Volvo Cars of North America announced a new factory-to-dealer incentive program. Cash payments to dealers are $750 to $1,500 on the 740 sedans and wagons, $1,500 on the 940 sedans and wagons and $2,500 on the 780 coupe. The program expires Oct. 31.

Porsche Car North America Inc. sent "Private Offer Certificates" to previous Porsche owners good for $8,500 off the price of 1990 and 1991 911 Carrera 4 models through Oct. 31. Dealer contribution is $2,500.

Incentive programs for **Toyota Motor Sales U.S.A. Inc.** and **American Honda Motor Co. Inc.** and some programs for **Mazda Motor of America Inc.** and **Mitsubishi Motor Sales of America Inc.** expired and had not been renewed by last Friday.

Correction: The factory-to-dealer incentive for **Sterling Motor Cars** is $8,000, or $3,000 if the consumer chooses a 0 percent financing program offering by the importer.

Special Correspondent Chris Eschenburg contributed to this report.

Toyota, Honda, Pontiac boost prices on '92s

KRISTINE STIVEN BREESE
and PHIL FRAME
Staff Reporters

The cars have more standard equipment, but it will cost considerably more to buy the best-selling 1992 models of Toyota, Honda and Pontiac than it did in 1991.

The cars are the Toyota Camry, the Honda Accord four-door sedan and the Pontiac Grand Am.

Toyota Motor Sales U.S.A. Inc. priced its full lineup last week and applied its biggest increase to the mid-sized Camry, its top-volume nameplate. The base 1992 Camry four-door sedan is $14,368, an increase of $1,480, or 11.5 percent, over the 1991 model. The 1992 car is all new. It is bigger than its predecessor; it has a more powerful engine and a driver-side air bag as standard equipment.

Toyota said the Camry prices are up an average of $659, or 4.3 percent, for 1992 on a comparably equipped basis.

The company also said its full stable of 1992 cars, including Camry, has risen an average of $490, or 3.9 percent, over the 1991 models after adjusting for year-to-year equipment changes. The increases range from $170 on the Corolla four-wheel-drive station wagon to $1,970 on the Camry Deluxe V-6 four-door sedan.

American Honda Motor Co. Inc. priced half of its Accord line. Accord is the best-selling nameplate on the U.S. market. Honda said the Accord four-door sedans are up a sales-weighted average of $641, or 3.94 percent.

The Accord DX is up $400, the LX has risen $450, and the EX has jumped $1,150. All three have a driver-side air bag, and the EX also has anti-lock brakes.

The coupe and wagon will be priced later.

Honda took some of the sting out of its 1992 increase by hiking Accord sedans $100 in May.

Grand Am, the sales king at Pontiac, is an entirely new car for 1992, with different series designations and major changes in equipment content. Exact comparisons are difficult, but the lowest-priced 1992 Grand Am is $11,899. The 1991 price leader was $10,174.

Anti-lock brakes are standard on all 1992 Grand Ams. Pontiac claims that a 1992 has a price tag "as much as $398 below a comparably equipped 1991 model."

Pontiac's 1992 and 1991 Grand Ams defy direct comparisons. For 1991, Grand Am was offered in base, LE and SE series. For 1992, the names are SE and GT, but the 1992 SE bears no relation to the 1991 SE in the level of equipment, and the GT is unlike anything in the 1991 lineup.

GM Canada's dealers add new products

ALEX LAW
Special Correspondent

TORONTO — General Motors of Canada Ltd. is introducing more new cars and new models this fall than most other car companies have in their entire lineup.

Along with the models common to the U.S. operation, the Canadian company is also offering Saturn for the first time and is rebadging several vehicles moved from the defunct Passport International Automobiles Division.

Some former Passport models will be sold in the new Saturn-Saab-Isuzu Truck stores. Others, like Passport's Daewoo Optima, will be sold by Pontiac. And Passport's Isuzu Impulse will go to the new Geo line, which is carried by Chevrolet-Oldsmobile dealers.

There are also a couple of names the U.S. market won't see: GMC Sunrunner (a version of the Tracker) and Pontiac Sunfire (a version of the Impulse). Both won't be available until early 1992.

GM's aim is to gain 1 percentage point of market share over the 35 percent expected in the 1991 model year. The company estimates that industry sales in Canada in the 1992 model year will total 925,000 cars and 445,000 light trucks.

RULES

FROM PAGE 4

restyled Chevrolet Blazer/GMC Jimmy and Suburban sport-utilities. But P. Stuart Meyer, safety engineer with GM's Truck & Bus Group, pointed out that after its recent "big program" to meet standard 208, the company will have to do an additional redesign for 1994 because new requirements for side door impacts will affect compliance with 208.

According to Meyer, GM's 1993-model Chevrolet Lumina APV, Pontiac Trans Sport and Oldsmobile Silhouette will be the company's first trucks to have driver-side air bags.

Air bags and side guard door beams, center high-mounted stop lights, and roof crush protection are currently major regulatory concerns for truckmakers.

But many additional new regulations are being considered, points out John Leinonen, executive engineer with the Safety Regulations and Planning Department for Ford Motor Co.'s automotive safety office.

The government has just finished researching vehicle stability — not only for trucks but also cars.

"It has the potential for significant implications, but we don't know yet what they'll say until we see the advanced notice (of rule making) next month," Leinonen said.

Trucks regulations are playing catch-up to car regulations. By the end of the decade, trucks will be subject to practically every regulation affecting cars, Leinonen said.

And industry officials anticipate that any future regulations, such those governing crashworthiness and crash avoidance, will automatically be proposed for both cars and trucks.

Additional weight generated by compliance with safety standards is also an industry concern, as fuel economy requirements for trucks tighten.

Side impact protection, for example, is expected to add 30 pounds; passive restraints, sensors, wiring, modules and brackets will likely add another 70 pounds.

"You look at the regulatory thrusts through the '90s, and you might be pushing close to 200 pounds in added weight on trucks," Leinonen said.

Every 100 pounds reduces the corporate average fuel economy of a truck by 0.3 mpg, he said.

While some industry executives privately fret about the potential impact of regulations on truck sales, publicly there hasn't been a lot of opposition to them.

Safety sells, and each company wants to be perceived as having the safest vehicles.

"Increases in costs, wherever they come, are difficult. But we are interested in moving ahead to make sure Ford is a leader in safety," Leinonen said.

Aug. build up; NUMMI adds truck

ROBIN-LYN RAIMEY
Special Correspondent

Production of the Toyota Hilux, the company's first U.S.-built compact pickup truck, began last week at the New United Motor Manufacturing Inc. facility in Fremont, Calif.

The new truck production area covers 1.7 million square feet and will have the capacity to produce approximately 100,000 trucks annually.

NUMMI is a joint venture between Toyota and General Motors which was established in 1984. Other models produced at the plant include the Toyota Corolla and the Geo Prizm.

U.S. car production for August 1991 was 412,930, up 16.9 percent from July 1991, and down 21.1 percent from August 1990.

U.S. truck production for August was 281,744, down 12.1 percent from August 1990, and the lowest August since 1986.

August saw higher figures for Canadian car and truck production. Last month Canadian car production was the highest for August since 1985. At 87,349, it was 35.4 percent above the previous month and 12.2 percent above the August 1990 total.

Canadian truck production totaled 64,936 in August — it was up 20.5 percent from August last year and up 40.9 percent from July.

All U.S. and Canadian car and truck assembly plants were down last Monday in observance of Labor Day.

Ford Motor Co. scheduled daily overtime shifts last week at its St. Louis and Kansas City, Mo., truck plants. The St. Louis plant builds the Ford Aerostar, and the Kansas City facility produces Ford F-series light trucks.

The Louisville, Ky., truck plant, which produces the Ford Explorer and the Ford Ranger, also scheduled daily overtime shifts and two shifts on Saturday.

GM scheduled two shifts of Saturday overtime last week at its Baltimore plant and one shift at the Oklahoma City and Scarborough, Ontario, plants.

Chrysler Corp. also scheduled Saturday overtime last week with two shifts at the St. Louis plant which produces minivans and two shifts at the Warren, Mich., plant that builds full- and mid-sized pickups.

Daily overtime was scheduled at the Bramalea, Ontario, plant, which produces the Dodge Monaco and the Eagle Premier.

GM's Lansing, Mich., (A) plant begins production of the Pontiac Grand Am on Wednesday.

On Sept. 3, GM's Janesville, Wis., plant began production of the Chevrolet and GMC Suburban, the Chevrolet Blazer and GMC Jimmy, which were previously produced at the Flint, Mich., plant. The plant also produces the Chevrolet Kodiak and the GMC Topkick medium-duty pickups.

Big 3 sales plunge 17% in early Sept.

DETROIT — Big 3 car and truck sales in the first 10 days of September were off 17.3 percent from the year-ago period.

Cars dropped 22.7 percent with 100,127 units delivered in the period compared to 129,457 last year. Trucks were off 8.2 percent with reported sales of 69,875 against 76,094 in 1990.

General Motors sales declined 19.6 percent with 87,290 vehicles sold compared to 108,582 last year.

Ford Motor Co. sales were down 18.9 percent, with 54,212 units against last year's 66,869.

Estimated Chrysler Corp. sales reflect a 6.9 percent drop in cars and a 3.2 percent decrease in trucks from the year-ago period. for a combined decline of 5.3 percent.

There were seven selling days in the period this year and last year. The daily selling rate was 24,286 vs. 29,364.

Honda exec hints at plant in Mexico

TORONTO — Honda's next car plant on the North American continent might be in Mexico, Honda Canada Inc.'s new president has hinted.

Louisville tops 1991 output

By ANNE E. WRIGHT
Chief Statistician

The Ford Motor Co. truck plant in Louisville, Ky., won the model year production championship hands down. But it had a head start.

With a total build of 484,415 of the 1991 Ford Explorers, Ford Rangers and Mazda Navajos, the plant produced more vehicles than any other plant in the United States and Canada. For the industry, production was down 3.0 percent from the 1990 model year.

An extended model year helped Louisville. Ford began producing 1991 Explorers in February 1990, and by the end of the run in July 1991, Louisville had built 359,139 copies.

The plant displaced the Marysville, Ohio, plant of Honda of America Manufacturing Inc. as the top production facility.

Marysville fell to third place this year, after a three-year reign. For the 1991 model year, Honda moved

Ford helps black dealers

Time to pay off 'blue sky' stretched out to 40 years

KATHY JACKSON
Staff Reporter

Ford Motor Co. and its black dealers have reached a compromise that some dealers hope will help them stay afloat.

Dave Smith, manager of Ford's Minority Dealer Operations and Training program, says Ford has agreed to amortize over 40 years the payback of goodwill on stores purchased in partnership with the manufacturer. That compares to the average five-year period now.

Good will, or blue sky, is an amount a purchaser pays above and beyond the value of the physical assets due to such factors as superior location, sales and customer base. Black dealers, most of whom purchase their stores from Ford under the Dealer Development program, claim that Ford paid too much for good will in many cases, which is wreaking havoc on their profits.

Goodwill payments are subtracted from a dealer's monthly profits, but there is no interest or carrying charge.

"Some dealers were paying as much as $10,000 a month to pay off blue sky," said Nathan Conyers, president of Conyers Riverside Ford in Detroit. "It was a horrendous burden they couldn't meet."

The Black Ford Lincoln-Mercury Dealers Association started putting pressure on Ford in February when the association wrote a letter to Rep. William Clay, D-Mo., stating that 80 percent of Ford's then 245 black Ford and L-M dealers were operating at a loss. The company

Frankfurt showstopper

One of the most talked about concepts at the Frankfurt show last week was the Audi Quattro Spyder, a low-slung, all-wheel-drive, mid-engine vehicle. Story and more show pics on Page 8.

Half the sales staff is quitting

Worried makers help dealers cope

JOSEPH BOHN
Staff Reporter

Steve Monacelli quit selling cars at his first Detroit-area dealership because management "treated you like a four-year-old kid" and kept reducing his compensation by eliminating free demos and by changing pay plans.

He quit his second job selling cars after the dealership forbade salespeople to quote prices. A sales manager handled all closings and took half the salespersons' commissions.

Monacelli, who has quit the car business, is part of a mass exodus that has seen the turnover for salespeople at car dealerships skyrocket to over 50 percent yearly, according to the National Automobile Dealers Association.

Tom Webb, senior economist for NADA, says that unlike before, people are not just moving from one dealership to another — but leaving the industry entirely.

Boris Kotler, owner of B.K. Chevrolet-Geo in Brooklyn, N.Y., and B. Kotler Ford in Franklin Square, N.Y., says turnovers are affecting import and domestic dealers alike.

Kotler, a member of Chevrolet's national dealer council, says, "Honda and Toyota may sell a few more cars per dealer, but they have many more salespeople and their grosses are way down.

"The dealers with Chevrolet and Toyota franchises are making their money in Chevrolet, not Toyota," he adds.

Low incomes, fueled by a drop in dealership sales and grosses and a lack of professional standards, are the chief culprits, according to NADA and automakers.

Stempel, Gault to open 1992 World Congress

DETROIT — General Motors Chairman Robert C. Stempel will deliver the keynote address at the 1992 Automotive News World Congress. The event is scheduled Jan. 12-15 at the Westin Hotel in Detroit.

Goodyear Tire and Rubber Co. Chairman Stanley C. Gault also will address the Sunday night opening session.

The 16th Automotive News World Congress, co-sponsored by *Automotive News* and the University of Michigan Transportation Research Institute, will be held in conjunction with the North American International Auto Show.

Twenty-six industry experts will address the four day congress on subjects important to the industry as it works toward economic recovery and faces the prospects of market consolidation and expanded internationalism in the early 1990s.

Keynoter Stempel already has faced a myriad of challenges in his short tenure as GM chairman.

He became chairman and chief executive officer on Aug. 1, 1990, the day before Iraq invaded Kuwait to start the crisis that led to war and intensified economic uncertainty.

Stempel, who evokes intense loy-

Isao Suzuki told a Canadian Press reporter that Honda could convert its motorcycle and auto parts plant in Guadalajara to automobile production — "or we could build a whole new plant to make cars." He was referring to Honda's possibilities for supplying cars to Mexico if a proposed free-trade pact among Canada, Mexico and the United States is agreed on.

A Honda spokesman later said that any plant in Mexico would be built to supply potential future demand in that market. He noted that Honda's assembly plant in Alliston, Ontario, and its two in Ohio are not yet running at maximum capacity.

Honda does not sell cars in Mexico.

Mazda cross-media deal worth $96 million

IRVINE, Calif. — Mazda Motor of America Inc. is entering into a $96 million deal with Time Warner for an extensive, three-year cross-media package that will help the automaker through a critical marketing period.

Advertising Age, a sister publication to *Automotive News,* reports that the program, set to start this year, is bigger than similar integrated marketing package deals Time Warner made with two U.S. manufacturers. Time Warner signed a $40 million pact with Chrysler Corp. in the fall of 1990 and sold an $80 million program last year to General Motors.

The centerpiece of the Mazda program, built around the theme "the meaning of life," is a space commitment to Time Warner's magazines. Other elements of the package include syndicated or cable TV programming to be sponsored by Mazda. In addition, Life is preparing to publish a book based on "the meaning of life," which Mazda will use as a marketing tool, perhaps to draw customers to showrooms.

Southeast Toyota wins early round in N.C. case

RALEIGH, N.C — (AP) — The North Carolina motor vehicle commissioner has selected a retired Superior Court judge to rule on complaints about the business practices of Southeast Toyota Distributors Inc.

Commissioner Robert F. Hodges thus gave the independent Toyota distributor a procedural victory. His decision takes the matter out of the hands of Hodges' staff, which had sued Southeast Toyota, alleging that the distributor acted illegally when it refused to accept the distributor's previous case in 1988. Hodges picked retired Superior Court Judge Robert A. Collier Jr. to preside over a case involving complaints from Toyota dealers that could lead to Southeast having its license revoked. A hearing planned for today has been postponed and hasn't been rescheduled.

The complaints include allegations that Southeast forced the dealerships to take cars equipped with unwanted accessories in violation of a 1988 consent agreement stemming from a previous case brought against the distributor.

1987 Chrysler minivans recalled for emissions fix

WASHINGTON — The EPA said last week that Chrysler Corp. will recall 96,300 of its 1987 Plymouth Voyagers and Dodge Caravans and Ram vans to control excessive hydrocarbon and carbon monoxide emissions.

Chrysler will install a carburetor choke adjustment shim that will allow for more complete combustion when the 2.6-liter engines are started, the agency said.

The recall excludes California vehicles.

Plant workers seek strike to make GM decide fate

LAKE ORION, Mich. — Uncertainty over their future has prompted leaders of Local 5960 to ask UAW leaders to sanction a strike at General Motors' Lake Orion assembly plant.

The authorization request was not made from a "reactionary mentality," said Marv Whiteman, plant chairman of Local 5960.

"It's obviously the last thing any of us want," Whiteman said, "but GM is causing a tremendous amount of stress for our people because of the uncertainty of all of our futures."

Cadillac plant local approves strike vote

GRAND BLANC, Mich. — Workers at a Cadillac plant here voted to strike in two weeks if health, safety and line speed issues are not resolved.

"At the moment we've gone back to the company to try and set things right by bargaining," said Gene Bone, president of UAW Local 1292. He said 78 percent of the local's members members voted for the strike.

Hyundai Excel is worst in injury claims analysis

ARLINGTON, Va. — Hyundai Motor Co.'s two-door and four-door Excel models were rated the worst cars overall for injury claims based on analyses of insurance coverage and claims data by the Highway Loss Data Institute.

According to the 1991 Injury and Collision Loss Experience report, the 1988-90 models with the best injury results are: Chevrolet Lumina Euro four-door, Volvo 740 and 760 station wagons, Lexus LS400, Jaguar XJ6, and Mercedes-Benz 420SEL, 560SEL, 300SEL and 350SDL.

The cars with the worst injury claims results are Hyundai Excel two-door and four-door, Nissan Sentra two-door, Dodge Daytona and Geo Storm.

briefly

Sperlich walks a lonely road

Former **Chrysler Motors** president Hal Sperlich surfaces in a Sept. 23 Fortune magazine article on the newest management craze — paradigm shifters. Hailed as one who broke the corporate mold when he fathered the minivan, Sperlich warns other innovators, "You're walking a very lonely road. Life in a large corporation is easier if you go with the flow and don't support major change. People who propose things that are different make more conservative people nervous, and the corporate environment just doesn't reward people for challenging the status quo."

But Sperlich, now a consultant, points out the rewards of innovation. "If we hadn't done minivans, Chrysler would be gone, no question," he said.

NAME GAME — Ford Motor Co.'s Ohio Truck Plant will be renamed later this month. The Avon Lake assembly plant will build the new Mercury Villager minivan, and **Lincoln-Mercury Division** didn't think the name "truck" was snazzy enough for a facility that is assembling Mercury's first entry in the minivan segment, said snickering Ford insiders. The minivan will debut next year and is a joint venture between **Mercury** and **Nissan Motor Co.** Ford spokesman Bill Carroll, who is on the name change committee, says more than 200 names were submitted by plant employees.

CURRYING FAVOR — "We have the lowest death rate in the world," pronounced National Highway Traffic Safety Administrator Jerry Curry last week, displaying figures that show that fewer than two Americans are killed on the nation's roads for every 100 million miles of driving. The NHTSA chief said the biggest future improvements could come from increased use of safety belts and air bags — a 10 percent jump in belt use would cut 2,000 deaths off last year's total of 44,529, he said. Curry noted that the only break in the downward trend of deaths came during the late 1970s, when Naderite Joan Claybrook headed the agency. "The inmates were in charge of the asylum then," Curry said.

SCENE STEALER — The Nissan Motor Co. Ltd. 1991 annual report is a wealth of news and data on the inside. For instance, net income was $346 million, and the company has 133,316 shareholders. But the cover offers trendy, stylized drama: A misty New York street, neon golden arches, a man in a Nissan Figaro coupe talking to a pretty woman. Figaro is a niche hit in Japan, where 200,000 buyers vied by lottery for 50,000 cars. The cover is a scene from an artsy romance movie called "Figaro," reportedly made with some Nissan financial backing. It follows a couple through Tokyo, Paris and New York. Neither car nor film is coming here, so don't look for the cover photo, either. Nissan says U.S. report readers will get something else.

Nissan's annual report features a little romance.

service

in brief

SERVICE

Ford extends warranty to '91s

DEARBORN, Mich. — Ford's new 1992-model bumper-to-bumper warranty coverage has been extended to 1991 Ford and Mercury vehicles with the purchase of a special Extended Service Plan contract.

Ford and Mercury dealers can now offer owners of 1991 Ford and Mercury cars and Ford light trucks three-year/36,000-mile bumper-to-bumper Extended Service Plan coverage with no deductible. The plan has a suggested retail price of $275, although individual dealer prices vary.

With eligibility limited to vehicles under two years/24,000 miles, the extended service bumper-to-bumper plan provides similar coverage to the 1992 warranty. The exception is towing-related services, which are already covered under the 1991 basic and powertrain coverage of the limited warranty.

LoJack records 95% recovery rate

LOS ANGELES — After a year of operating in cities in seven states, LoJack Corp. says 95 percent of stolen vehicles equipped with the company's tracking unit have been recovered.

Through the end of May, LoJack reported 2,057 unit activations leading to the recovery of 1,943 vehicles. The Needham, Mass., based company has agreements with law enforcement agencies in Massachusetts, New Jersey, Michigan, Illinois, Florida and California.

In the Los Angeles area, police recovered 65 of 70 stolen LoJack-equipped vehicles and credit the system with helping officials uncover several "chop shops."

Toyota names contest winner

TORRANCE, Calif. — Carolyn Edwards of Marietta Toyota of Marietta, Ga., has been named the winner of the automaker's first national contest for assistant service managers.

Edwards was awarded $10,000 toward a new Toyota, a trip to Japan and $3,000 cash. She was one of 400 assistant service managers who qualified for the contest, out of 2,000 Toyota assistant service managers.

Training program reaches milestone

DEARBORN, Mich. — Ford Motor Co.'s Automotive Student Service Educational Training program has graduated its 1,000th student since being established in 1985.

The two-year program is a joint effort of the automaker and 54 local community colleges and technical schools to develop entry-level service technicians. During the program, students alternate between the classroom and dealerships every nine weeks.

GM tests recycled coolants

Results to guide dealers on use

DALE JEWETT
Service Editor

General Motors is testing engine coolant produced by several recycling processes to determine which, if any, won't damage vehicle cooling systems.

Greater concern for the environment, coupled with stricter local, state and federal regulations governing disposal of wastes, has forced new-car dealers to choose between paying to have used coolant hauled away or buying a recycling machine.

But GM and several other automakers have advised their dealers not to use recycled coolant, warning that it could void the warranty.

"Our concern right now is that we're not sure of the product," said Fred Uhlig, director of research and development for GM's Service Technology Group.

The goal of the study, according to project coordinator Wayne Bradley, is to prove out the different recycling processes — both dealership-based machines and off-site centers — to be able to make recommendations to GM dealers.

Because not much attention has been paid to coolant recycling until recently, Bradley said no standards exist for classifying used coolant and measuring performance of recycled coolant.

Bradley is a member of an American Society of Testing Materials committee working to set such standards. But for the study, Bradley is using GM standards for virgin coolant.

"When you look at most claims by makers of coolant recycling machines, they claim to meet the standards," Bradley said. "But you don't know what the quality of the beginning coolant was."

Last spring, Bradley set out to create a worst-case scenario and solicited coolant samples from GM employee vehicles. From 600 submissions, he took the oldest 200 with a mean age of seven years of use.

In addition, coolant from 30 Japanese-built vehicles was added to include inhibitor-based coolant formulations in the study.

Ethylene glycol, the main ingredient in engine coolant, is biodegradable. But used coolant contains contaminants such as lead and zinc. The EPA considers used coolant to be a hazardous waste if the lead content exceeds five parts per million.

Seven recycling processes are being tested: filtration with centrifuge; filtration with ion exchange; reverse osmosis; ionic level filtration; chemical filtration; chemical filtration and oxidation; and vacuum distillation.

> "When you look at most claims by makers of coolant recycling machines, they claim to meet the standards. But you don't know what the quality of the beginning coolant was."
>
> WAYNE BRADLEY
> COOLANT PROJECT COORDINATOR

The study includes processes used my most companies selling recycling equipment, including Kleer-Flo, Wynn's, Butler, Finish Thompson, BG, Stanadyne, Activ and FPPF.

After processing, the samples were first tested for meeting GM engineering standards for chemical/physical and corrosion properties. The samples were then tested for cavitation corrosion.

Cavitation is formation of bubbles in the coolant that erode metal parts when they collapse. The chemistry of some coolants can accelerate the damage.

By the completion of those tests, about half the processes were unable to produce coolant that met the standards, Bradley said, and were dropped from the survey.

Coolant from the remaining processes has been used in a two-month in-service test in GM fleet vehicles.

Eight companies involved in off-site recycling were invited to participate in that facet of the study. Bradley said five declined.

The participating firms were asked to submit information to GM about their trade names and processes.

GM is randomly acquiring samples of recycled coolant from the participants for testing, with periodic re-testing to confirm quality.

Bradley said results from the study will be completed in late October, and GM will notify dealers of its recommendations.

Bradley also plans to present a technical paper on the study and its conclusions at the SAE convention next year. AN

New parts program

Chrysler Corp. has unveiled a new Mopar . . . First! parts program for Chrysler, Plymouth, Dodge, Jeep and Eagle dealers to target parts sales to garages and service stations. Dealers receive a package of marketing and promotional materials, including a computer disk that prints a customized wholesale parts price list.

Service business holds steady in July

DETROIT — Parts and service business in July was nearly equal to that of the same month a year earlier.

Revenues in July totaled 99.7 percent of the amount in July 1990, as measured by the Automotive News Service Index. For the first seven months of this year, parts and service business totaled 99.5 percent of activity recorded during the same period in 1990.

July was the third consecutive month that business trailed the year-ago total.

The largest gain for the month was noted in repair orders written, up 4.3 percent. Total parts sales and shop parts sales also rose, while gross profit on all labor and parts and accessories sales remained unchanged.

For the year to date, total labor sales and shop parts sales have posted small increases, while gross profit on all labor and parts and accessories and repair orders written have declined slightly.

Among reasons given for the increases for the month:

■ "The effects of the recession are starting to show recovery," reported one dealer. "The work that vehicles needed during the tough times is now being done. Most improved is customer-paid work. Let's hope this is just the beginning."

■ Another dealer said, "Longer factory warranties are starting to show up on warranty sales as units age." The dealer also reported an "increase in summer tourist traffic for repairs" and "very effective" service management.

■ Another dealer wrote, "July was one of the hottest months in history, which surely affected service volume."

Figures used in the Automotive News Service Index are compiled from monthly reports on service and parts business from a cross section of the nation's new-car dealers.

SERVICE INDEX
99.7★

	July '91 vs. July '90	Jan.-July '91 vs. Jan.-July '90
Gross Profit on All Labor and P&A Sales	– 0%	– 0.6%
Repair Orders Written	+ 4.3%	– 0.1%
Total Labor Sales (Customer & Warranty)	+ 3.2%	+ 1.3%
Shop Parts Sales (Customer & Warranty)	+ 3.0%	+ 2.6%
Sales of All P&A	– 2.3%	– 1.0%

★ Survey by Automotive News shows that dealers' service and parts business in July 1991 was 99.7 percent of business in July 1990. Service business in the first seven months of 1991 was 99.5 percent of business in the corresponding period in 1990.

Shops use video images to speed repairs

SAN ANTONIO — Insurance company United Services Automobile Association and seven repair shops here are testing a system of transmitting photos of wrecked vehicles over telephone lines to cut the time needed to approve repair work.

The repair shops use images from a video camcorder and a Photophone, developed by Image Data Corp. of San Antonio, to send pictures and information over phone lines to the insurance company's claims department.

The system is being used primarily to handle supplemental claims, estimates submitted by repair shops to repair damage not detected in the original appraisal.

Supplemental claims are common since internal damage is often difficult to identify until a vehicle is disassembled.

Typically, such a claim requires an appraiser to be sent to the repair shop for another inspection, holding up repair work for up to three days.

With the Photophone system, the insurance company says it can approve supplemental claims in minutes. The system also speeds up payment to repair shops, cutting the turnaround time from as much as 30 days to as little as two days.

August import sales drop 12.7%

JIM HENRY
Staff Reporter

"Near-luxury" import models like the Acura Vigor, BMW 325i, Mitsubishi Diamante and Infiniti G20 were pockets of strength in a weak August.

Sales of imported cars fell 12.7 percent compared with the year-ago month. The decline mirrored the 12.1 percent drop-off for all U.S. cars, imported and domestic.

The newest "near-luxury" model reflected in the August figures, the BMW 325i, was introduced in late June. It helped boost 3-series sales 16.4 percent for August. For the year to date, 3-series sales were down 13.9 percent.

The Acura Vigor, launched in April, is accounting for a growing share of Acura sales.

The Vigor made up 13.8 percent of Acura's August sales, which were down 1.1 percent for the month primarily because of a big drop in Integra sales.

Another entry-level, second-channel model, the Infiniti G20, accounted for 26.8 percent of Infiniti's August sales.

So far this year, nearly four of every 10 Infiniti sales have been G20s.

Infiniti's sales were up 148.3 percent in August and 94.1 percent for eight months.

August sales of the flagship Q45 rose 111.1 percent and were up 35.2 percent for the year. Without the G20, Infiniti would still be up 19.0 percent for the year.

The Mitsubishi Diamante was first sold in significant numbers in May. The Diamante accounted for 33.2 percent of the company's August sales.

August also marked the first appearance of the Mitsubishi Expo and the Expo LRV in the company's monthly sales figures, at a total of 409 units.

Nissan unveils technology to reduce noise

TOKYO — Nissan Motor Co. Ltd. has applied for patents on a system to neutralize engine noise in the passenger compartment with counterbalancing sound waves.

The company is expected to introduce the system this month on its Bluebird model, which is sold only in Japan.

The technology has been used on refrigerators and is under study for use on larger systems, cars and airplanes.

Although the technology has been used on prototype vehicles, Nissan would be the first to use it on a production vehicle.

obituaries

Frank Carroll

PRESQUE ISLE, Maine — Frank "Skip" Carroll of Carroll's Auto Sales (Chevrolet-Buick-Oldsmobile-Cadillac), died Sept. 9.

He was a past president of the Maine Automobile Dealers Association.

Joseph Casner Jr.

MADISON, Conn. — Joseph Casner Jr., retired owner of Casner Oldsmobile, died Sept. 4.

He was 79.

ANNE E. WRIGHT
Chief Statistician

Sales of light vehicles in Canada were down 9.0 percent in August after increasing the two previous months.

Car sales slipped to 68,980, falling behind the year-ago month by 7.3 percent. Car sales had been on the rise since March. With the August results, they were down 1.2 percent for the year.

Truck sales dropped 13.0 percent to 28,098 and were off 6.3 percent for the first eight months.

One trend-breaker was Mazda; the company's sales jumped 20.0 percent for the month. Mazda was up 16.3 percent for the year.

Nissan also reported gains for the month and year-to-date. In August, Nissan's car sales rose 24.5 percent, countering a 21.4 percent drop in truck sales for a net increase of 6.3 percent.

Other volume importers reporting gains for the month included BMW (19.6 percent), Jaguar (6.7 percent), and Suzuki (100.2 percent).

Among the country's Big Three, General Motors of Canada and Ford of Canada posted double-digit percentage decreases for the month.

GM sales were down 10.9 percent for the month and 3.7 percent for the year. Ford of Canada was hit harder, dropping 23.7 percent in August and 13.0 percent for the year.

Ford suffered August declines across the board — North American and imported cars and North American trucks. GM's sales of imported cars rose 58.3 percent for the month, but its sales of North American cars and trucks and imported trucks were down.

Both GM and Ford were optimistic that the Canadian economy was on the way to recovery following the gains in previous months.

"The recovery we saw in June and July slackened, mostly in late August," said John Radford, vice president of general marketing for Ford of Canada. "But we see it only as a blip and are confident that sales will come on strong again in September."

Chrysler Canada sales were stable. They increased 0.8 percent for the month and 0.5 percent for the first eight months.

EPA to review on-board vapor recapture units

MAX GATES
Staff Reporter

WASHINGTON — The long-running debate over the best methods for reducing vapor emissions at gas pumps resumes Sept. 26 when the EPA will hear comments on the safety of on-board vapor recapture systems.

The focus of the hearing, in Romulus, Mich., will be a July report from the National Highway Traffic Safety Administration. The report concluded that on-board fuel vapor recovery systems pose a significant safety risk.

NHTSA, charged with reviewing the safety of on-board systems under the 1990 Clean Air Act amendments, said the size and complexity of the proposed systems would pose a significant risk of fire in collisions.

Vapor recovery systems for use during refueling would have to be three to four times larger than the current on-board systems used for recapturing fuel vapors while the engine is running, NHTSA engineers concluded.

The alternative to on-board recovery systems, so-called Stage II systems which capture gasoline vapors at the fuel pump, are both safer and more efficient, the agency said.

The 1990 amendments mandate on-board refueling vapor recovery systems within four years, but only if the systems are found to be safe. More than 50 major metropolitan areas not meeting federal air quality guidelines would require Stage II systems if on-board devices are deemed unsafe, the EPA said.

BUILDING for

Diemakers is building 82,000 sq. ft. of additional production space to accommodate the demands of the diecasting market. Because of our quest for perfection, Diemakers has become a leader in the production of quality aluminum, magnesium, and zinc diecastings. Although we implement the best in automated systems, we believe that our associates are responsible for our diecasting excellence. Continuous improvement has allowed us to expand to the global market, a market insistent on quality.

Emerging

We have been recognized with numerous quality achievement awards, and more importantly, we have been rewarded with additional business. We are focused on continuing growth and committed to giving you an innovative, cost-effective solution. Please contact our sales office for more information and let us be a part of your business.

TOP PLANT

Ford Louisville wins for '91-model year

continued from PAGE 1

production of the Civic from Marysville to East Liberty, Ohio. The Marysville facility now produces only the Accord, America's best-selling car; for the year, it made 352,089 of them.

General Motors' Lordstown, Ohio, plant was No. 2 in total vehicle output for the 1991 model year. The plant produced 380,102 Chevrolet Cavaliers and Pontiac Sunbirds.

Sales for the 1991 model year are lackluster, even compared to the less than mediocre 1990. The model year, which ends Sept. 30, will show sales off more than 10 percent. Manufacturers cut production at almost every plant in order to keep supplies in balance with anemic sales.

Nonetheless, thanks to strength in the sport-utility segment, U.S. truck production exceeded output for the 1990 model year. Declines in Canadian truck production more than offset the U.S. gains.

Ford reported a 5.1 percent increase in U.S. truck production. Besides Explorer, Ford began producing the Mazda Navajo at the Louisville plant.

GM's model year truck sales are slow, but production increased in the 1991 model year for both Chevrolet and GMC. According to GM, the increased production is in preparation for the fall selling season, in light of increased market share for small pickups and sport-utilities.

The only new assembly plant for the 1991 model year was GM's Saturn Corp. facility in Spring Hill, Tenn. The plant accounted for almost 49,000 cars in the 1991 model year.

Diamond-Star Motors Corp. added two new 1991 models, the Eagle Summit and Mitsubishi Mirage. Diamond-Star is a joint-venture between Chrysler Corp. and Mitsubishi Motors Corp. Despite the two new models, production at the Normal, Ill., facility was down 8.4 percent.

Three transplants reported increases in U.S. car production: Nissan Motor Manufacturing Corp. U.S.A., 22.7 percent; New United Motor Manufacturing Inc., 1.4 percent, and Subaru-Isuzu Automotive Inc., 334.9 percent.

Nissan boosted production of the Sentra during the model year, and Subaru-Isuzu's plant in Lafayette, Ind., was in its infancy in the 1990 model year. Subaru-Isuzu began building the Isuzu Rodeo during the year and finished with 31,378 Rodeos.

Production in the United States and Canada totaled 11,149,748 cars and trucks in the 1991 model year, 3.0 percent below the 11,494,489 built in the 1990 model year.

Mississippi hits misleading ads

JACKSON, Miss. — The state Motor Vehicle Commission has ruled that four Jackson car dealerships placed misleading ads and should serve six months' probation.

A $5,000 fine will be dropped if the probation is completed without incident, the ruling said.

Barry Canada, lawyer for Regency Nissan, Regency Toyota, Regency Mitsubishi and Regency Subaru, said he will appeal the ruling to Hinds County Chancery Court.

The ruling says the four Regency dealerships ran "bait advertising" that "did not reveal the availability of advertised vehicles and failed to disclose material facts concerning the advertised vehicles."

DAEWOO

Discussions won't derail LeMans

continued from PAGE 4

pull the plug on its investment and walk away from one of the world's most dynamic economies and strongest growing domestic auto markets.

More likely, GM is looking to the government to lend a helping hand to restructure the troubled partnership and perhaps act as a mediator in arranging for a Korean partner to buy out Daewoo and become GM's new partner.

The company most often mentioned in this context is the Samsung Group, which has been denied entry to the automotive business but is quietly recruiting top-notch personnel from Korean auto companies.

Last year, the government denied Samsung its application to enter automotive manufacturing. But a reappraisal was promised for next month.

The Ssangyong Group's name also has come up, but analysts discount the possibility. Ssangyong is cementing a closer relationship with Mercedes-Benz AG, which recently granted the company licenses to produce light commercial vehicles and engines in Korea.

Lee Jong-Dae, president of the Kia Economic Research Institute, expects some changes. "I don't know that GM and Daewoo will part," he said, "but some kind of rearrangement must be made to continue the joint venture in Korea."

Toyota best in sales per dealer

KAREN DETKOWSKI
Statistician

The industry's sales downturn in August was accompanied by a decline in the number of sales per dealer for most makes, according to *Automotive News* calculations.

Only seven makes showed sales-per-dealer increases over July. They were Honda, Mazda, Hyundai, Isuzu, Volvo, BMW and Volkswagen.

Toyota remained king of the hill in August with a sales-per-dealer loss of only three units from July in cars and trucks.

Saturn sales per dealer fell 18 units from July, underscoring the first downturn in the company's sales since introduction. Saturn dealers sold 7,000 cars in August, an 18.0 percent decline from 8,538 in July.

Honda, which sells only cars, posted an increase of 15 sales per dealer over July and captured second place in the overall car-truck rankings. Honda was first in car sales per dealer in August. In July, Honda was fourth in cars and fourth overall.

In trucks, Toyota topped Ford in sales per dealer in August. Ford had led in trucks for five months.

In the hot Ford-Chevrolet race, Ford has recorded higher average sales per dealer than Chevrolet the past five months, although Chevrolet has led Ford in overall sales since March.

Sept. inventory rises to 60 days

TIM HENRY
Staff Reporter

NEW YORK — The combined inventory of new cars and trucks grew slightly in August because of an increase on the truck side. The new-car supply held steady.

The Sept. 1 stockpile represented a 60-day supply, compared to a 58-day supply on Aug. 1.

The industry had a 70-day supply of trucks on Sept. 1, compared to 61 days on Aug. 1. The stockpile rose for each of the Big 3. Domestic truck supplies climbed from 62 to 75 days, while the supply for the much smaller import-truck segment shrank from 58 to 54 days.

The car inventory represented a relatively lean 56-day supply on Sept. 1, the same as on Aug. 1. The supply of domestic cars grew, from 48 to 50 days, but that was well below the year-ago figure of 64 days. Stocks of import cars fell from 78 to 74 days during August.

General Motors had a domestic car inventory of 59 days, compared to 43 days on Aug. 1. A year ago, GM's domestic car supply was 72 days, and GM was the only Big 3 maker with a leaner supply than a year ago.

GM's truck inventory represented 76 selling days on Sept. 1, up from 70 a month earlier.

Like GM, Ford Motor Co.'s days' supply of trucks was fatter than its car figure. Ford had a 69-day supply of domestic cars, up from 56 days on Aug. 1 and 67 days on Sept. 1 last year.

Ford had enough trucks on hand for 73 selling days, compared to 59 days a month earlier.

Chrysler Corp.'s domestic light trucks showed a 75-day supply, while domestic cars were at 83 days. On Aug. 1, the numbers were 55 days for trucks and 84 days for cars.

American Honda Motor Co. Inc. was at 42 days for cars, down from 51 on Aug. 1.

Nissan Motor Corp. in U.S.A. had a 69-day supply of cars and trucks on Sept. 1, compared to 59 days a month earlier.

Toyota Motor Sales U.S.A. Inc. showed the thinnest Sept. 1 inventory — only 23 days worth of cars and trucks, down from 26 days on Aug. 1.

RETAIN

Worried car makers help dealers cope

continued from PAGE 1

General Motors, Chrysler Corp. and NADA have been working on programs to curb the turnover.

GM expects to complete final details of its divisions' programs later this month for presentation to dealers, according to David Hudgens, Chevrolet assistant public relations director.

Chevrolet is the lead division on the program. Hudgens had no specifics on its plan. But GM sources say the program will call for a combination of sales training and added compensation.

Pending dealer approval, enrollment is slated to begin in the fourth quarter and the program is expected to start in first quarter of 1992. One portion of the program calls for salespersons to be credited $50 (more for Cadillac) for each vehicle they sell. Costs would be shared equally between GM and its dealers.

Salespersons would be paid their funds three years after the sales. For example, funds accrued from the 1992 calendar year would be paid in January 1995. A salesperson loses the original dealer contributions by leaving or moving to another GM dealership selling the same make.

GM would administer the program and distribute payments.

Dealers informed of the program by *Automotive News* say they would reserve judgment until they heard full details. But they agree [illegible] of the [illegible]

"I'd love to see the factories come up with special incentive programs for salespeople," adds Mark Schienberg, executive vice president of the Greater New York Auto Dealers Association.

He says that while many dealers have increased the flat salaries they pay salespersons to help offset drops in commissions, there are still dealers with salespersons who survive solely on commission.

Angelo Santoro of North Coast Subaru in Long Island, N.Y., restricts his salespersons to commissions. "It's the only way to make them hungry. Otherwise, they sit back and do nothing. They sit back and do nothing, anyway. Imagine if you offered them a salary," he says.

GM's program is partly patterned on a successful one implemented by Volkswagen of America Inc. The Volkswagen Sales Guild program, now entering its third model year, automatically registers retail salespersons who get a 75 percent or better score on an annual VW product knowledge test. They maintain certification by periodically attending additional training.

As part of the program, they are credited $150 per vehicle sale, paid in $50 increments over three years in January of each year.

Audi salespersons are required to take an engineering facts book test and a certification exam and to attend a minimum of one Audi training program to be eligible for various bonuses.

Audi's year-end bonuses range [illegible] of 60 [illegible]

Chrysler, Toyota, Mazda join 1992 rebate derby

ARLENA SAWYERS
Staff Reporter

Chrysler Corp., Toyota Motor Sales U.S.A. Inc. and Mazda Motor of America Inc. kicked off their 1992 rebates last week. They joined Ford Motor Co. and Pontiac in paying incentives on cars that haven't yet been officially introduced.

Also, Mitsubishi Motor Sales of America Inc. altered the incentives on 1990-91 models, and Lotus Cars USA is paying dealers as much as $15,000 per unit to move cars.

Meanwhile, American Honda Motor Co. Inc. extended the dealer payment on the 1991 Civic four-door.

Chrysler last week added some 1992 cars and trucks to its consumer rebate lineup through Sept. 30.

The rebates are: $300 to $750 on Dodge trucks; $400 to $750 on Jeeps; and $500 on Chrysler, Plymouth and Dodge minivans and Plymouth Laser and Eagle Talon.

Cut-rate financing does not apply to 1992 models, but minivan buyers may choose the rebate or Chrysler's new Ultimate Guarantee package, which includes benefits such as a cellular telephone, four-year road service at no extra charge and guaranteed trade-in value.

Consumers who purchased 1992 minivans before the program was announced will be notified by mail that they are eligible for the cash or the guarantee, Chrysler Corp. said.

A new **Toyota** program pays dealers $200 to $900 for sales of 1991 Camrys and 1990, 1991 and 1992 Corollas.

The cash to dealers on 1990, 1991 and 1992 non-base trucks is $200 to $1,300. The payments are based on performance against quota.

Honda is trying to make room for its all-new 1992 Civic by paying dealers $400 on the 1991 Civic four-door.

The program runs through Sept. 30.

Mazda new incentive program includes customer cash on two 1992 models.

The company is paying $500 on the 1991 and 1992 MX-6 and $1,000 on the 1991 and 1992 Mazda 626 through Nov. 4.

Until Oct. 2, the customer rebate on the 1991 Protege is $800.

Also, Mazda is offering a $1,000 consumer rebate on the 1991 Navajo until Dec. 3.

In lieu of rebates on the 626 and Protege, customers may choose 5.9 percent financing for contracts up to 48 months.

Through Oct. 2, Mazda is paying dealers $500 on the 1991 MPV and 2,000 to $2,500 on the 1991 RX-7 depending on the number sold.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

CHRYSLER CORP. (1992 models; expires Sept. 30)

Dodge Dakota Club Cab	$300
Other Dakota, DW pickup	$750
Eagle Talon	$500
Jeep Cherokee	$750

All cars (1990, no expiration date)	$500-1,500

VOLVO (1991 models; expires Oct. 31)

740 series	$750-1,500
940 series	$1,500-2,500
780 coupe	$2,500

incentive WATCH

Until Nov. 4 dealers earn $2,000 on the 929.

A Mazda plan that enables low-volume dealers to earn up to $500 on the 323 remains in effect until Nov. 4.

Mitsubishi is offering consumer rebates of $750 on the 1990 and 1991 Mirage in its Southwest and Southeast regions.

Mitsubishi's dealer incentive program on 1990 and 1991 cars and trucks varies by region. The rebates range from $250 to $2,100 on cars and from $400 to $3,000 on trucks. The program expires Oct. 31.

Lotus is offering dealer incentives of $5,000 on the 1991 Elan, $11,000 on the Esprit Turbo and up to $15,000 on some specially equipped Esprit Turbos.

The Lotus program applies to vehicles already in stock and continues until all supplies are exhausted.

Brits reject Toyota bid on strikes

ED WENDT
Staff Correspondent

LONDON — British labor unions last week rejected a proposal by Toyota Motor Co. that workers at its new plant in the United Kingdom adopt a no-strike contract.

Britain's Trade Union Congress, an umbrella organization roughly equivalent to the AFL/CIO, swiftly condemned the proposal as "alien" and approved a resolution that would prevent any member union from adopting no-strike contracts.

Toyota is building a $1.2 billion assembly plant in Derbyshire that is due to come on-stream next year. It will be capable of building 200,000 units a year by 1998.

Britain's unions gave in to Toyota's earlier demand that workers there be represented by only one union.

The company also said last week that it wants to defer pay negotiations until 1994, two years after plant startup, and called for a 39-hour, five-day workweek. A flexible clause would permit the company to schedule workers for alternate Saturday work.

The resolution passed by the Congress was sponsored by a liberal-oriented general technical union, the MSF. The union accused other unions who have been vying for the new contract of participating in a Toyota-sponsored "beauty contest."

"Whatever looks least like a labor union is the odds-on favorite to win the contract, said MSF General Secretary Ken Gill.

But the Amalgamated Engineering Union, considered the leading contender among the five unions vying to represent Toyota workers, branded the Trade Union Congress resolution as "a negative and racist piece of contraband." Pointing out that Japanese makers have created 50,000 jobs in Britain in recent years, the union accused the MSF of "sheer hypocrisy."

Mitsubishi car prices rise $423

CYPRESS, Calif. — Mitsubishi Motor Sales of America Inc. has raised the prices of its 1992 cars an average of $423 on a sales-weighted basis, according to an *Automotive News* analysis.

Also last week, Hyundai Motor America said its new Elantra sedan will start at $8,995 and the GLS version will begin at $9,999.

Mitsubishi's increases ranged from $40 on a the Mirage GS four-door sedan to $1,670 on the Eclipse GSX Turbo with all-wheel drive. The Galant GSR four-door was reduced $510.

The new Expo LRV station wagons start at $11,169, and the larger Expo versions are priced from $1 ,949.

Mitsubishi did not announce new prices for the Diamante or the Montero. A compny spokesman said that the Diamante sedans may be repriced next month — they were introduced last May as 1992 models.

The Montero sport-utility will be replaced in December.

The 1992 Montero models will be priced considerably higher than the 1991 models, which range from $15,789 to $19,099.

Canada strike watched

ROBIN-LYN RAIMEY
Special Correspondent

The traffic slowdowns at the Windsor/Detroit border caused by striking Canadian public employees pose a threat to vehicle production, and manufacturers are on alert.

Auto production has remained fairly stable in spite of the strike. Canadian car production was 23,626 last week, up 21.6 percent from the previous week. U.S. car production last week was 122,003, up 31.8 percent from the previous week.

U.S. truck production was 79,887, up 23.5 percent from the previous week. Canadian truck production of 18,231 was up 4.2 percent from the previous week. For the year to date, truck production in Canada and the United States is down 16.1 percent.

All Big 3 assembly plants in Canada are operating on a just-in-time delivery system.

The slowdown in parts supply has caused headaches for Ford of Canada workers, but they are receiving some parts via airlift and have kept production rolling.

The day shift at Chrysler Canada Ltd.'s Pillette Road plant in Windsor, Ontario, was sent home two hours early last Tuesday, but the afternoon shift kept its usual schedule.

Ford Motor Co. has scheduled daily overtime this week at its truck plants in Louisville, Ky.; Kansas City, Mo.; and St. Louis. The Louisville plant produces the Explorer, the Ranger and the Mazda Navajo; Kansas City makes F-series light trucks, and St. Louis makes the Aerostar.

General Motors scheduled overtime last Saturday at the Buick City car plant in Flint Mich., which produces the Buick LeSabre and the Oldsmobile Eighty Eight Royale, and at two plants in Lordstown, Ohio, which produce the Chevrolet Corsica and Beretta, and Chevrolet and GMC full-sized vans.

The car plant in Arlington, Texas, and the truck plant in Baltimore also scheduled Saturday overtime. Arlington builds the Cadillac Brougham, Chevrolet Caprice and Buick Roadmaster; Baltimore produces the Chevrolet Astro and GMC Safari.

Chrysler Corp.'s St. Louis No. 2 truck plant was scheduled to operate two nine-hour overtime shifts last Saturday. The Toledo, Ohio, truck plant is scheduled to operate two nine-hour daily shifts this week. St. Louis No. 2 makes the Chrysler Town and Country, the Dodge Caravan C/V, the Grand Caravan and the Plymouth Grand Voyager minivans. The Toledo plant produces the Jeep Cherokee, Comanche and Grand Wagoneer.

Chrysler's Newark, N.J., assembly plant has been expanded to produce LeBaron coupes and convertibles. The plant built its first convertible last Monday, and will begin producing the 1992 coupe Wednesday.

France admits U.S. Accords

PARIS — The Industry Ministry confirmed late last week that Honda Motor Co. had received tentative approval to begin exporting U.S.-built Accord wagons to France outside the strictures of a European Community agreement that limits Japanese auto sales in Europe.

Citing the recent agreement, which allows France to limit Japanese penetration to 4.5 percent of its market, French customs authorities had blocked the importation of about 165 U.S.-built Accords. But after U.S. trade officials stepped in on Honda's behalf, French officials agreed to treat the Accords as American instead of Japanese cars.

Big 3 team up on recycling

Consortium will explore design for disassembly

JACK KEEBLER
Staff Reporter

The Big 3 are about to form a consortium to study how to recycle even more of the automobile.

European carmakers, forced by tough legislation, are the world leaders in vehicle-recycling technology.

But Chrysler Corp., Ford Motor Co. and General Motors are poised to launch a consortium attack to catapult them ahead of European and Asian makers on recycling and "design for disassembly," sources at all three companies confirm.

Experts at the companies believe that American consumers will soon shop for recyclable vehicles with the same zeal that they exhibit in shopping for safety features.

Last week, Richard L. Klimisch, executive director of General Motors' environmental activities staff, said: "A Big 3 vehicle-recycling consortium will soon be announced." It would join other consortia formed by the increasingly cooperative Big 3.

In this case, the joint research will be moving out ahead of governmental regulations, which have prompted much recent Big 3 research on such issues as fuel economy and pollution control.

The new consortium will come despite what Klimisch described as a "surprising lack" of auto-recycling legislation. Automakers' environmental engineers, however, predict that U.S. consumers are likely to embrace recycling

Ford flares up

Ford Division will target import buyers and young people in the 1992 model year, says division general manager Ross Roberts. This new Flareside pickup will share advertising focus with Taurus, Escort and pickups. Story on Page 3.

Mercedes courting Porsche

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — A casual offer by Mercedes-Benz AG last week to acquire a stake in Porsche AG is likely to lead to closer ties between the two despite Porsche's insistence it is not for sale.

Analysts point out that a deal, offered almost off-the-cuff by Mercedes Chairman Werner Niefer during a radio interview, would make strategic sense for Porsche, which has been hit by falling sales, lower earnings and the loss of several key managers.

Both companies said last week that no formal talks have been held. And Arno Bohn, chief executive of Porsche, and Ferdinand Porsche, son of the company's founder and a major shareholder, said the company is not for sale.

But neither Porsche executive raised categorical objections to the possibility of forging closer links to Mercedes.

The two automakers already have an extensive development and production relationship

INTRO-92

VW dealers still faithful despite sales downturn

ARLENA SAWYERS
Staff Reporter

Sales are lousy, the product is outdated and the parent company in Germany is out of step with American consumers. But don't blame management in the United States.

That's how many VW dealers feel, despite last week's announced staff cutbacks and another high-level personnel change.

Dealers tend not to blame VW United States, which is a division of Volkswagen of America, the U.S. subsidiary of Germany's Volkswagen AG, and is responsible for importing and marketing VW vehicles in the United States.

Last week, VWoA said it will reduce its staff by 150 employees by March 31, 1992, using attrition and layoffs if necessary. VWoA had 1,745 employees in the United States as of Aug. 31.

The company also named Welton C. Mansfield vice president of

Novel auto ad ideas draw $100 million

Videos, cable, direct mail slice through the clutter

ARLENA SAWYERS
Staff Reporter

Modern technology is giving car marketers new hope for reversing sales slumps and cutting through advertising clutter created by more than 600 car and truck models.

Automobile marketers, by some accounts, are devoting up to 2 percent — about $100 million — of their collective marketing/advertising budgets to videocassettes, home computer news and information services, experimental cable television channels and highly targeted direct-mail programs.

Advertising Age, a sister publication to *Automotive News*, reported that the automotive industry spent $5.5 billion on TV, print, radio and out-door advertising in 1989.

While the money devoted to the less-traditional type of advertising is a small share of total spending, experts say the proliferation of vehicles, compounded by intense competition, will keep car marketers looking for innovative and sometimes novel ways to break through the clutter.

"Motorsports and golf sponsorships are inno-

corrections

The 1991 model-year production table in the Sept. 16 issue listed incorrect totals for Honda of America Manufacturing Inc. The correct totals are: Marysville, Ohio: 352,089; total Honda: 552,421.

GM restyles small trucks

HANS G. LEHMANN/HIDDEN IMAGE

Engineers have been conducting hot-weather tests on the restyled Chevrolet S10 and GMC Sonoma pickups, due to bow in the 1993 model year. Styling is more rounded, with hoods that slope downward. The new instrument panel is more car-like with round analog gauges and high-mounted air vents. The trucks' sport-utility cousins will be restyled for 1994.

advertising schedule.

Overall, magazine spending is expected to be boosted moderately at each division from about $90 million this year at Ford Division and $30 million at Lincoln-Mercury, reports *Advertising Age*, a sister publication to *Automotive News*.

New model year advertising for both divisions breaks this week on network television and in magazines with October titles.

Ford Division "took about 40 magazines off the schedule, which brings us down to about 90," said John Vanderzee, division advertising manager.

Stephen Lyons, Lincoln-Mercury general marketing manager, said the division will use 15 to 20 magazines for Lincoln, down "about a half dozen," and Mercury advertising will run in 25 to 30 publications, a reduction of 15 to 20.

Daihatsu to hike prices 3.7% on Charade, Rocky

LOS ALAMITOS, Calif. — Daihatsu America Inc. said Friday it will raise prices of its 1992 models — the Charade subcompact and Rocky sport-utility — an average of 3.7 percent over comparably equipped 1991 models. Prices will be announced Oct. 11, the company said.

Base prices for 1991 Charade models range from $6,397 to $9,697; Rocky models, from $11,297 to $12,997.

Ford trims prices a tad from intro

DEARBORN, Mich. — Prices of 1992 Ford Motor Co. cars will be slightly lower than pre-introductory prices given to dealers in July.

Ford spokesman Dave Krupp says final prices will average 3.5 percent higher than comparably equipped 1991 models. Pre-intro prices came in 3.7 percent higher.

Firm prices for 1991 models at introduction were 1.9 percent higher than final 1990 prices.

All Ford light trucks to offer air bags by '94

DEARBORN, Mich. — Ford Motor Co. will make driver-side air bags available in all of its light-duty truck models by 1994. Currently, air bags are standard in the Aerostar minivan and Econoline full-sized van.

Air bags on all other light trucks will be optional when Ford starts phasing them in next year, said Ford spokesman Gene Koch.

By the mid-1990s, Ford will begin phasing in passenger-side bags in its light trucks.

Britain to scrap new tax on cars

LONDON — Britain's Conservative government, faced with an election as early as November, said last week it would scrap a controversial 10 percent new-car tax and review stiff new levies on company cars. Industry leaders say the measures have wrecked the domestic car industry.

British car sales fell for 23 consecutive months through August. For the year, they are expected to be down 25 percent to about 1.5 million units. Industry leaders charged that the taxes, introduced in the government's March budget, exacerbated the effects of a normal economic downturn.

Also, Ford said it was raising prices on the Sierra, Fiesta and Granada by as much as 5 percent.

Philippines invite luxury car plants

MANILA — The Philippines government last week opened its auto industry to more competition by offering a new series of licenses to companies wishing to assemble luxury sedans with engines of 2.8 liters and above. Most cars of this size are smuggled in.

The move follows last year's creation of a "People's Car" program for the assembly of vehicles with engines smaller than 1.3 litres. That plan opened the car market to six new companies, who joined three existing assemblers of medium-sized vehicles.

Meanwhile, car sales through August were 45 percent below last year, at 12,758 units, said the Philippines Automotive Manufacturing Institute. It blamed the nation's economic slump and a series of natural disasters.

New Volvo ad uses crash to demonstrate safety

Volvo Cars of North America's first ad campaign since the "monster truck" scandal will again use dramatic demonstrations to illustrate safety, reports *Advertising Age*, a sister publication to *Automotive News*.

The first major image work for Volvo from Messner Vetere Berger Carey Schmetterer, New York, is said to feature a spot for the new Volvo 960 sedan in which the passenger compartment stays intact after the car is hit from behind during a rainstorm and crashes head-on into a wall.

In a spot that ran last year, the roof of a Volvo car was reinforced before an oversize pickup truck ran over a line of cars.

The Federal Trade Commission last month ordered Volvo and its former agency to pay $150,000 each for the deceptive advertising.

The new ads break Oct. 7.

Mazda taps Nissan for dealer training v.p.

IRVINE, Calif. — Mazda Motor of America Inc. has named Herbert A. Clark to fill a new position: vice president of dealership training.

The company said the move reflects the importance of customer handling as Mazda prepares to launch five new products over the next seven months.

Clark will oversee a new Dealer Training Division, which will coordinate sales, service and parts training.

He has spent the last eight years at Nissan Motor Corp. in U.S.A., most recently as manager of quality performance.

briefly

Chevy trucks lose heartbeat

All good things come to an end, but losing "The Heartbeat of America" seems pretty final. Nonetheless, reports *Ad Age*, Chevrolet Trucks are dropping the five-year-old musical themeline. In the big battle against Ford, the S-10s and C/Ks will drive under a new musical line: Bob Seger's song, "Like a Rock."

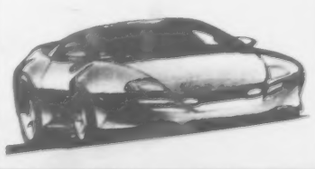
HAYBURNER HEAVEN — Counting on horsepower of a different kind, car dealer Hal Earnhardt has entered his two-year-old filly in the Breeders' Cup race Nov. 2 at Churchill Downs. Earnhardt, 35, is one of the owners of Earnhardt Auto Centers in Tempe and Gilbert, Ariz. The horse, Soviet Sojourn, is a favorite in the $1 million race.

DA ACCORD — **Honda's** Moscow store is doing so well, the company and its trading partner Kanematsu Corp. plan to open another point in Leningrad by late 1992. Muscovites bought 33 units between the grand opening in May and the post-coup end of August. The goal is 100 a year at Leningrad Honda. But it might be St. Petersburg Honda by then.

TRUCK WITH FLARE — One of the more striking vehicles displayed at **Ford Division's** model rollout in Detroit last week was a metallic blue, full-sized truck owned by racer Bill Elliott. The Flareside, F-series truck, accented with reddish-orange stripes, was customized by Jack Roush, a Michigan entrepreneur and race car fan who supplies performance engines to Ford. Elliott's 5.8-liter V-8 engine pumps out 300 horsepower; the regular 5.8-liter V-8 delivers 200. Ford spokesman Mike Parris says the flareside truck, which Ford will reintroduce later this year after a five-year absence, "is a real status thing, a cowboy status," particularly in states such as Texas and Oklahoma.

NEW HOT WHEELS — The new **Subaru** SVX and **Mazda** MX-3 have barely reached U.S. shores, but already the government thinks they'll have high theft appeal. The two coupes, the **BMW** 3 series and the **Oldsmobile** Delta Eighty Eight have been added to the National Highway Traffic Safety Administration's list of "high-theft" lines. They and 103 others must carry identification numbers on major parts. Five cars exempt because of anti-theft equipment: the BMW 850, **Acura** Vigor, **Porsche** 968 and **Lexus** SC300 and SC400. Last year, 1.3 million cars changed hands illegally, according to the FBI's uniform crime report.

MUSTANG MADNESS — **Ford Motor Co.** is keeping the 1994 or 1995 version of its venerable Mustang well hidden, so *Motor Trend* magazine and its *Car Craft* and *Hot Rod* siblings ran a contest, asking the public to "Design the Next Generation Mustang." Winner was Chris Ito, a designer with ASC Inc., the Southgate, Mich., convertible house. Ito's prize is a ragtop 1992 Mustang, converted by rival C&C Inc. of Brighton, Mich.



Winner in Mustang design contest

trucks

Sales of big trucks continue to ride a rocky road

JOSEPH BOHN
Truck Editor

Medium- and heavy-truck sales continued their lackluster performance in August.

Class 5 and 6 sales were not as bad in August as in earlier months on a year-to-year comparison, but Class 7 and 8 sales continued to worsen, according to figures provided by the Motor Vehicle Manufacturers Association.

Mack Trucks Inc.'s sales continued their substantial decline.

In August, Mack's sales were down 45 percent from August 1990, and the total for the first eight months of the 1991 calendar year was 37.5 percent below 1990.

Separately, Rothschild Inc., a New York-based investment firm, said net new orders for heavy trucks totaled 7,776 for August, up 10.8 percent from 7,020 in July.

But the total was sharply below the 10,014 net new orders booked in August 1990.

Frank Prezelski, an analyst with Rothschild, said that while the new-order totals are not very good, the trend shows improvement if adjustments are made for pre-buying to beat price increases in May.

in brief

TRUCKS

Detroit Diesel increases sales

DETROIT — Detroit Diesel Corp.'s share of the North American Class 8 diesel engine truck market is at a 15-year high.

Detroit Diesel's share reached 23.6 percent for the first seven months of calendar 1991, according to the Motor Vehicle Manufacturers Association.

Roger S. Penske, Detroit Diesel chairman, said production capacity will increase to 34,000 units annually in calendar 1992 from 1991's 25,000. By January 1993, plans are to further increase capacity to 165 Series 60 engines a day or 43,000 yearly.

About 42,000 Series 60 engines are operating in North American trucks, with a mean mileage of about 155,000. More than 800 of the engines have accumulated at least 500,000 miles without significant problems, he added.

Distributors see slight profits drop

LIVONIA, Mich. — Net profits before taxes for the typical truck equipment distributorship dropped to 1.5 percent in 1990 from 1.6 percent and 1.7 percent in the prior two years.

The National Truck Equipment Association's annual survey also showed that even the top 25 percent highest-profit distributorships experienced a continued decline in profit margins to 4.8 percent in 1990 from 5.0 percent the previous year.

The report cited a 1.2 percent increase in operating expenses as the primary reason for the decline.

Sales growth for the 136 firms surveyed fell from 4.2 percent in 1989 to 3.0 percent in 1990. The firms' sales had increased 11.5 percent in 1988.

Joan Christophersen-Call, a spokeswoman for the association, said the annual product meeting in September drew 360 attendees, about the same as in previous years. The National Truck Equipment Association has about 1,325 member companies.

Paccar renames parts operation

BELLEVUE, Wash. — Paccar Inc. changed the name of its retail automotive parts subsidiary, General Automotive Inc., to Paccar Automotive Inc.

The action was one of several to position Paccar's auto parts business for long-term growth, according to M.A. Tembreull, Paccar Automotive president.

GM, Ford ready import fighters

New Class 3 and 4 models on horizon

JOSEPH BOHN
Truck Editor

DEARBORN, Mich. — General Motors and Ford Motor Co. plan a number of new 1992½ and 1993 commercial truck models aimed at staving off importers in the Class 3 and 4 segments.

Thomas A. Pfingst, Chevrolet assistant director of fleet sales, truck and special vehicles, predicted a moderate increase in 1992 model commercial truck sales over this year's estimated 1.2 million units.

At the National Truck Equipment Association's annual product convention, Pfingst said Chevrolet has been pouring on manpower, programs and products to increase its market share.

It has expanded its network of committed commercial truck dealers and added several account managers to its Warren, Mich., based commercial truck department over the past year to service dealers and customers.

The company also is launching a number of special incentives for different segments of this market.

Throughout the 1992 model year, for example, small recovery vehicle companies, or "wreckers," that do not receive special fleet discounts will get a $1,100 rebate on the purchase of a gasoline engine-powered C/K pickup cab chassis and a $1,600 rebate on diesel-powered chassis.

The division is providing 90 days of free floorplanning as an encouragement for dealers to stock 1992 model HD-3500 Class 4 chassis.

The GP cutaway is a major new 1993 product for next fall. Although it will give Chevrolet and GMC Truck an edge on Ford Division in a segment currently dominated by the latter, it is also heavily aimed at medium-duty truck importers that have been steadily moving into the Class 3-4 cab chassis market.

The GP features a G-van cab mounted to a P-chassis.

According to Thomas Jensen, an engineer with GM's Truck & Bus Group, the GP cutaway will have:

- High gross vehicle weight ratings
- Straight, unencumbered frame rails for easy body mounting
- A flexible variety of wheelbases
- A fiberglass tilt cab for easy serviceability.

A commercial cutaway version will offer a choice of 125-inch, 133-inch, 157-inch or 178-inch wheelbases; gvws of 10,100 to 14,100 pounds; a standard 5.7-liter V-8 engine and an optional 7.4-liter V-8; and a standard automatic overdrive transmission.

The school bus version will not be available with the 178-inch wheelbase and it will only be offered with the 5.7-liter V-8.

The motor home version will have 158.5-inch to 208-inch wheelbases; gvw ratings of 10,500 to 14,500 pounds; and a standard 7.4-liter V-8 and four-speed automatic transmission.

The GP offers a choice of a two-stage combination semi-elliptic 6,200-pound, 8,000-pound or 11,800-pound rear suspension and an independent coil spring front suspension. An I-beam option is available for the front.

Power steering, 16-inch by 6.5-inch dual rear wheels and a standard 40-gallon fuel tank on commercial and motor home models are standard. School bus versions have a shielded 30-gallon tank.

To compete fully against importers' diesel-powered chassis, GM also is working to get the 6.2-liter diesel and 6.5-liter turbodiesel engines approved for the chassis by the 1993 model year.

"This market is primarily domestic, and we're going to do everything in our power to keep it that way," Pfingst said.

GM cutaways are currently limited to 10,500 pounds gvw and restricted in wheelbase lengths and rail design. Ford's cutaway, derived from its Econoline van, goes to up 11,200 pounds gvw.

GM is also preparing new 9,200- to 9,300-pound gvw versions of its regular and extended-length G-vans for introduction in January. Regular Chevrolet and GMC G-vans with single rear wheels currently go up to 8,600 pounds gvw. This has limited appeal to small bus and other commercial vehicle manufacturers.

Ford already has Econoline versions in the 9,200-pound gvw range. Ford leads Chevrolet in certain commercial truck segments by fairly sizeable margins.

Ford registered 53,800 chassis cabs derived from its F-series pickups in calendar 1990, compared to 16,600 registrations for Chevrolet in chassis cabs derived from its C/K pickups, according to R.L. Polk registration. Through four months of 1991, the figures were 11,100 and 4,200.

Ford's strength is partly due to the success of its Class 4 F-Super Duty, which Chevrolet only began competing against in the 1991 model year with its HD 3500 series.

Ford's chassis cab version of the Super Duty gets a new cab and sheet metal for 1992, along with a new 184.8-inch wheelbase version. The new Super Duty chassis cab is expected to be available in February.

John P. Renaud, Ford product design engineer for special vehicle design and development for light truck engineering, said the Super Duty is currently available in 136.8-inch and 160.8-inch wheelbases. They have five-foot and seven-foot cab-to-axle dimensions.

The 184.8-inch wheelbase allows Ford to provide a nine-foot cab-to-axle dimension to accommodate longer bodies, such as rollback carriers or cargo boxes similar to those on U-Haul-type vehicles.

The frame on the longer axle model is a little wider, due to side rail reinforcements that were added, Renaud said. The fuel lines are are now steel, but generally the structure of the chassis is very similar to last year's models.

Renaud said gvw was increased to 15,000 pounds for 1992, up from 14,500 last year.

Bentley sparks Rolls outlook

DAVID VERSICAL
National Editor

DETROIT — Nothing like a whiff of new product to stimulate sales — even if the car costs $261,800.

Rolls-Royce Motor Cars Inc. is counting on its new Bentley Continental R for a boost in 1992. Executives say they've taken more than 80 orders, each with a $30,000 deposit, on the new car, which goes on sale in February.

Rolls-Royce's parent company in Britain will ship only 90 of the turbocharged, 6.75-liter, V-8 coupes for calendar 1992.

Even with a push from the new Bentley, Rolls-Royce expects 1992 sales to be about the same as this year's, between 500 and 600. About 40 percent will be the new Continental R and other Bentleys; the balance will be Rolls-Royce models.

The company doesn't release monthly sales numbers, but it concedes that volume is off about half this year. In 1990, the company sold about 1,200 cars.

Rolls-Royce has taken more than 80 orders — with $30,000 deposits — for its new Bentley Continental R.

Howard Mosher, president and chief executive officer, points his finger at the U.S. luxury tax, although he acknowledges that most folks who pay six figures for a car *can* afford the levy. In his view, some people are protesting the tax, which ranges from about $10,000 to $20,000 on Rolls and Bentley models, by not buying at all.

Mosher also cited a recession that has hit white-collar industries such as banking and real estate for much of the decline.

Despite the poor climate, Rolls-Royce will make a big push for the new Bentley. The car was unveiled at last year's Geneva auto show, and the company's 47 dealers have been allowed to take new orders nearly a year in advance of the sales date. To discourage speculators, Rolls-Royce has been trying to give current owners first crack at the car. So far, the owners have accounted for 80 percent of the orders.

Rolls-Royce will pitch the Bentley as a car for driving enthusiasts to help draw more distinction between its brands. The Continental R will be the first Bentley model in four decades that doesn't share a body style with a Rolls-Royce.

Mosher described the typical Rolls owner as a prestige buyer who's not likely to put more than 4,000 miles each year on the car. Bentley owners tend to be younger (about 48) and typically chalk up 10,000 miles a year.

Sept. sales consistent with trend

KAREN DETKOWSKI
Statistician

Early September's 13.8 percent sales decline was the U.S. market's sixth consecutive report of falling volume.

Early July was the last time the 10-day results showed a year-to-year improvement. But that slight gain was achieved only with the help of an extra selling day.

The first 10 days of September gave no sign that the industry is breaking out of a slump that deepened in August. Last month was the first time this year that sales on a seasonally adjusted annual basis failed to show improvement.

Toyota Motors Sales U.S.A. Inc. was one exception in early September: Its Lexus and Toyota brands both improved as the company's sales jumped 6.03 percent.

Among the Big 3, General Motors was off 19.3 percent and Ford Motor Co. slipped 18.6 percent. Chrysler Corp.'s sales, which along with those of most import makes are estimated by *Automotive News*, dropped 8.3 percent.

The Sept. 1-10 period was only the second this year with seven selling days. The daily selling rate of 32,603 cars and trucks compared to 37,821 in the year-ago period, which also had seven selling days.

Chrysler offers satellite services

HIGHLAND PARK, Mich. — Chrysler Corp. is marketing the services of its Pentastar Satellite Communication Network, claiming customers will benefit from the size and flexibility of the service.

The Pentastar Network is the largest privately owned satellite network in the world, Chrysler said.

The network now services almost 5,000 national dealership locations and corporate sites.

Chrysler said it will offer its satellite services to companies that need instant, continuous communication with plants, offices, distribution centers or franchises.

The company also plans to expand the network to include locations in Canada, France, Austria, Japan and China.

Germany cools, Europe sales fall

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Pulled down by an anticipated but steep drop in German demand, European new-car sales fell 9.2 percent in August, the first year-to-year decline in eight months.

German sales,-which accounted for 39 percent of total European demand in July, plunged 20 percent last month as the impact of higher interest rates and increased personal and fuel taxes began to be felt by consumers.

Sales in Germany had surged 67.5 percent in July as buyers rushed to beat the deadline for a tax rebate on small catalyst-equipped cars.

Reflecting the drop in German volume, to 200,500 units, European sales fell to 1.09 million last month from 1.2 million a year earlier. For the eight-month period, volume was still ahead by 2.3 percent, to 9.8 million units, according to *Automotive News* estimates.

Most analysts expect this year's sales to fall below the 1990 level of 13.2 million.

"We are seeing a substantial slowdown, but less than anticipated," said Stephen Reitman, who follows the industry for UBS/Phillips & Drew in London.

Reitman, who said he had expected August sales to be off as much as 20 percent, expects the European market to slip to about 13,175,000 million units this year.

Sales in recession-stricken Britain fell less than in earlier months. August sales were down 15 percent, bringing the year-to-date decline to 22 percent.

August is traditionally the biggest volume month for Britain's car industry and can account for more than 20 percent of annual sales.

Ford is still the market leader with about a 22 percent share, trailed by General Motors' 16 percent share.

> "We are seeing a substantial slowdown, but less than anticipated"
>
> **STEPHEN REITMAN**
> INDUSTRY ANALYST

Sales in France were off 15 percent last month from a year earlier and were down 14.3 percent for the year.

In Spain, August sales declined 22 percent for an eight-month drop of 15.5 percent.

Sales in Italy fell 10 percent last month, yielding a drop of 3.9 percent for the year to date.

According to estimates, every automaker expect BMW, Skoda and Suzuki posted lower sales last month than in the year-earlier month.

Volume for the Volkswagen Group, the European sales leader, fell nearly 14 percent last month, reflecting its strong dependence on German demand.

But for the year to date, VW sales were up 10.5 percent, to 1.6 million units, and the company has increased its overall share of the market by more than a point since last year.

General Motors Europe, another automaker strongly dependent on German sales, was off 15 percent in August. But the company, up 8.6 percent for the eight-month period, edged Italy's Fiat Group out of the No. 2 sales spot last month with a 12.6 percent share of the market.

For the eight months, GM sales were 5,900 units ahead of Fiat.

Reflecting continuing problems and loss of share in its home market, Fiat sales skidded 30 percent last month. For the eight months, Fiat sales were off 11.7 percent from the year-earlier period.

Ford of Europe said its sales through August were up 6.8 percent, although August sales fell about 12 percent.

Mitsubishi mulls adding new recreational vehicle

MARY ANN MASKERY
Staff Reporter

TOKYO — Mitsubishi Motors Corp. is considering adding a mid-sized vehicle to its recreational-vehicle lineup, according to Motoo Suzuki, the company's recently appointed head of passenger-car development.

Mitsubishi already dominates the segment in Japan with its Pajero/Montero sport-utility and is doing well with the recently introduced RVR vehicle, a car the company is selling in the United States as the Expo LRV.

But according to Suzuki, there is room for another vehicle or vehicles between the "heavy" Pajero and the "light" RVR.

"The recreational-vehicle segment shows the most promise" for future growth in Japan, Suzuki said. For the young and the not so affluent, he says, the RV is the sports car of choice.

In the past five years, the Japanese market has become more and more differentiated, splitting into niche segments. That is becoming true within the RV segment itself, Suzuki says, and it is becoming necessary to find ways to meet the individual tastes of consumers.

Suzuki says that by maintaining its command of the RV segment, the company can generate the funds to develop its passenger-car lineup.

Expo LRV has sold well in Japan, where it's badged the RVR.

Largely because of its success in the RV and large car segments, two areas still showing strong growth in an otherwise down market, Mitsubishi sales have held up this year where other automakers have faltered.

With the newly remodeled Pajero and the Diamante, Mitsubishi has had stars in both segments.

But Suzuki said the RV segment is not going to divert the company's attention from its newly acquired success in the upscale side of the lineup.

The Diamante has established a name for Mitsubishi in the luxury area, even carving a new segment in the Japanese market centered around the 2.5-liter engine.

PORSCHE

Mercedes takes friendly approach

continued from PAGE 1

that could easily be widened into an equitypartnership, analysts say.

Porsche produces about 3,000 Mercedes 500E models a year in an underutilized plant, a "significant chunk of business for a company that makes 26,000 to 28,000 cars a year," said Stephen Reitman, an analyst for UBS Phillips & Drew in London.

In addition, the two companies jointly developed the Mercedes 300CE convertible, while Mercedes makes the automatic gear box for the Porsche 928.

The issue arose when Niefer, in an interview on Austrian radio, was asked whether Mercedes would take a stake in Porsche.

"We will think about it," he replied.

Mercedes then issued a harder statement later in the week. "If Porsche were to become available, we would be interested," a spokesman said.

Analysts believe the informal nature of Nieffer's radio statement was intentional.

"They deliberately said it in a friendly way," said John Lawson, who follows the European auto industry for Nomura Research Institute in London.

"It is clear the companies have moved to friendlier footing during the past several years as the Porsche/Audi liaison expired. The relationship has blossomed."

Lawson said Mercedes has experience dealing with closely held companies such as Porsche, which is controlled by the Piech and Porsche families.

When Daimler entered the aerospace business several years ago, it bought a 70 percent interest in the Dornier GmbH family business, Lawson said.

"It is not unusual for Mercedes to help out another German company by buying into it. It has a precedent of going in where there is a strong family," he said.

But the families may be willing to gamble on their financial muscle to remain independent, Lawson said.

Indeed, a Porsche spokesman said the Stuttgart-based automaker has no financial need to seek out a marriage partner. "We have more than 600 million marks (about $335 million) in cash on the books and we have positive earnings this year," he said.

Even so, Porsche has fallen on hard times lately as luxury-car sales have dried up worldwide.

Porsche said it expects earnings for the fiscal year ended July 31 to fall to 50 million marks (about $29.6 million) from last year's 68 million marks ($40.2 million).

At the same time, it said production for the fiscal year was off 15 percent, to 26,486 units, amid sharply declining sales in several key markets.

Sales in the United States, where Porsche sold 9,139 units last year, were off 51.6 percent through July, to 2,844 units. Annualized, that would put Porsche sales for 1991 at only 4,875 units, down 46 percent from 1990.

In a bid to slash overhead, Porsche said last week it will cut 550 management and production jobs in Europe by next July.

The company also is working out early retirement and incentive packages to encourage voluntary resignations, said a spokesman. Porsche currently has 8,500 employees in Europe, of which 2,500 are production workers.

The company announced late last month that it was cutting its U.S. work force by almost 25 percent, or 77 jobs.

The company last week also announced the loss of a key member of its management board, the third such departure in a year.

Ulrich Bez, chief engineer and head of development and research, left amid problems with the company's underfunded racing program and a debate over the development of the new 989 model, according to insiders.

HALSTEAD

Cautious about East Bloc

continued from PAGE 6

the buying progress."

Under the plan, which Ford announced for the U.S. market last week, a buyer can purchase a power, luxury, sport or even station wagon model of a given line with limited options. The packages vary according to the market.

In Italy, Ford took a hunk out of Fiat sales by offering engines smaller than the heavily taxed 2.0-liter, causing the Italian maker to accuse Ford of cutting margins.

Halstead said Ford's margins in Italy have increased, but declined to elaborate.

In France, Ford is trying a similar scheme, but with heavy emphasis on diesel engines, popular because of the disparity in fuel prices. Ford's share in France has increased by 2 points, to 9.1 percent, since last August, he said.

Halstead said Ford hasn't tried the strategy in Germany and has limited experience with several special value packages in Britain. But Ford likely will target Spain next, he said.

New Sierra not a 'world car'

FRANKFURT — Ford Motor Co. erred when it defined the replacement for its European Sierra and U.S. Tempo/Topaz as a so-called "world car," said L. Lindsey Halstead, chairman of Ford of Europe.

Since Ford launched the project, "there has been such an acceleration and proliferation of models available that it will be increasingly difficult to smash around a world car," he said in an interview.

The more sensible approach would be to develop "world platforms and world powertrains," Halstead said.

"You get much of the benefit of not duplicating the product development process" while still being able to build for the differing tastes of different markets, he said.

Halstead would not say when the new Sierra will be introduced, but it is expected as a 1993½ model. The car will be front-wheel drive.

The current Sierra has received two minor facelifts since its introduction in 1982.

— *Diana T. Kurylko*

VW

Dealers still support company

continued from PAGE 1

VW United States, responsible for sales and marketing.

William Gelgota resigned as VW U.S. marketing director last spring.

While praising U.S. VW management on one hand, dealers say Volkswagen AG is doing little to give American dealers and consumers what they want — sophisticated, stylish cars.

It won't be until next fall that VW will start selling the third generation Golf to the United States — cars that are technically more sophisticated than the cars they replace but have few styling changes.

VW dealer Jack T. Price is looking forward to having new products to sell.

"I think the new cars will be very sellable," said Price, owner of University Volkswagen-Mazda-Saab in Albuquerque, N.M.

Ten years ago, Price sold as many as 90 VWs a month. For the last two years his sales have averaged about 30 a month.

"I think we have excellent management, but we're selling 10-year-old iron. I think the parent company looks at the European business and if the U.S. (dealers) can sell what's sold in Europe, so be it. If not, dealers have a problem. We may not be as important as the Europeans."

If dollar investment is any indication, North America is low on Volkswagen AG's priorty list.

In April, Volkswagen AG announced a $21 billion spending plan through the late 1990s: $7.7 billion in Czechoslovakia, $3.4 billion in the former East Germany and $6.7 billion in Spain. The German manufacturer plans to invest $1 billion each in China, Portugal and Mexico.

VW officials argue that the United States is a part of its global strategy and point out its plans for Mexico include more exports to the United States.

Still, some dealers feel that their needs have gone unaddressed while the parent company concentrated its effort and money in Europe.

Frank Griffin, owner of Frank Griffin Volkswagen in Jacksonville, Fla., said VW managers in Germany ignored the Japanese competition in the United States for too long and failed to understand that American buyers like cars with "bells and whistles" in addition to quality.

"The Beetle was so successful, we were lulled to sleep," said Griffin, who sells about a dozen VWs a month.

"Germans historically are practical. They have trouble understanding if you build an excellent product, why worry about trim and color.

"We Americans like cars that are chic and modern. We need new products and we need them more frequently."

Despite several well-publicized advertising and marketing campaigns in the last two years, VW sales have been pretty dismal.

Since fall 1989, VW has cut prices, announced the end of consumer rebates and launched "*fahrvergnugen*," an advertising campaign to draw attention to the Germany company and increase floor traffic.

Most recently VW launched "Club Fahrvergnugen," a program offering VW buyers credit cards and discounts on other consumer goods and services

Still, sales are lagging. As of Aug. 31, VW's calendar year car and truck sales stood at 70,349, down 27.3 percent from the same period last year. That gives VW 0.8 percent of the U.S. vehicle market, down from 1 percent last year.

In the 1960s and early 1970s, VW owned the import market in the United States. Fueled by the popularity of the Beetle, the first volume subcompact, retail sales peaked in 1970 at 582,573 units. Sales began to erode as Japanese nameplates such as Toyota, Honda and Datsun, later renamed Nissan, became key players.

A poor sales climate has also resulted in several management changes.

In the past year Hans-Jorg Hungerland, president and chief executive officer of VWoA, was promoted back to Germany to oversee VW and Audi sales worldwide.

William Young, a former VW vice president, succeeded Hungerland as president and John Kerr, formerly vice president of finance, was appointed to the newly created position of president of North American operations responsible for the United States, Canada and Mexico.

U.S. EMPLOYEES AT EUROPEAN IMPORTERS

Importer	Current employees or (expected after announced cuts)	Employees Jan. 1, 1991

As of Aug. 31, VW's calendar year car and truck sales stood at 70,349, -down 27.3 percent

Dealer Griffin said he believes VWoA is on the right track by hiring Mansfield. Griffin also cited VWoA's new design studio in Los Angeles as a positive move and believes the staff reduction is a "prudent business decision."

Ray King, owner of Midpoint Motors (VW-Audi-Porsche-Mazda) in Midland, Mich., said he doesn't believe that VW dealers in the United States have been neglected by Volkswagen AG.

"There is a different mentality in Germany," he said. "European cars have to be utilitarian. They're used to $3 a gallon gasoline. The cars are designed to perform, to operate, to be driven.

"They are value-oriented, not glitzy cars."

Lewis Riffle, general sales manager at Hawthorne Lincoln-Mercury-Volkswagen in Hawthorne, Calif., said he would like to see VW offer more cars with options of the dealers' choice and in colors popular with consumers.

For instance, VW tends to send dealers Jettas with stereos as part of the option package when many customers would rather buy their own stereo, Riffle said.

Jettas in popular colors such as teal green and black are in high demand but short supply, he added.

"They build a dynamite product," said Riffle. "But they need to give dealers more cars they can sell, than those they can't sell.

"Some people don't want to pay $350 for a stereo. They want to go to Circuit City and buy their own," he said.

Subaru merging two regions

Subaru of America Inc. will close its Irvine, Calif., sales and service region and consolidate the operation into its Portland, Ore., office.

The move merges Subaru's Western and Northwestern regional offices into one Portland-based Western region.

A spokesman for the company said the move would "achieve greater operating efficiencies and does not represent an effort to back away from any market."

The company plans to integrate the two operations by year-end. The Portland office will handle sales, service, parts and dealer relations for a nine-state region.

The spokesman said some jobs will be lost in the consolidation but the number has not been determined. The two offices employ about 60 people each.

The consolidation is the third such move in the past year by Subaru and its parent company, Fuji Heavy Industries Ltd.

Last year, the distributor consolidated its San Antonio, Texas, region into Denver, and consolidated two East Coast regions into an Atlanta office.

A Subaru design studio in Irvine will not be affected by the closing, the spokesman said.

ANDERSON

Cash-poor public slows recovery

continued from PAGE 3

equity, that is, the customer owes more than the vehicle is worth.

As a result, car dealers are closing less than one in five deals. Given the economy's slow advance and the poor state of consumer finances, NADA doesn't expect a major recovery in 1992.

"We will be real happy with 1990 levels of 13.9 million units," said Anderson.

The car and truck market will remain basically a replacement market for the foreseeable future. "Those manufacturers and dealers that are building production and sales facilities based on the heyday of the mid-1980s are in fact building a fantasy land," he said.

He suggested that dealers continue to streamline operations and look for new profit centers. "Right now, our biggest concern is reduced grosses," he said. "Margins have been on a steady decline through most of the 1980s even as sales were rising to record highs."

This year, auto dealers' gross pre-tax margins are hovering at about 7 percent, according to Anderson, less than half the 1990 average of 14.5 percent reported by NADA. The association reported that dealership net profit before taxes was 1.0 percent last year. Dealers are still losing money on new-car sales, Anderson said.

Computer graphics enliven car advertising

JOHN P. CORTEZ
and CLEVELAND HORTON
Crain News Service

Automakers are turning more than ever to special effects as a way to get noticed in the clutter of more than 30 car and truck introductions.

Since the 1992 models started rolling out, at least three companies — Lexus, Buick and Plymouth — have relied on computer graphics to catch the eye.

Lexus decided it needed a gimmick to help introduce the ES300 sedan.

"We wanted to create a halo from the early LS400 image," said J. Davis Illingworth, Lexus general manager. "We needed to connect the LS400 and the new ES300."

The division borrowed a computer graphics metamorphosis technique from the feature film "Terminator 2: Judgment Day" for a 30-second spot.

The commercial opens with a car under a cover outdoors. The wind picks up the cover and blows it away to reveal the LS400. Then the skin of the car starts to flap like a cover and it, too, blows away, revealing the new ES300.

"Morphing," a means of transforming one image into another, also was used in a Buick spot for the new LeSabre.

A hook lifts the outer shell off a 1991 model like a giant sheet — actually an air-brushed silk of the vehicle. Underneatn, it's the 1992 LeSabre.

"The LeSabre was a car with a huge reputation for quality," said John Mead, executive creative director at Buick agency McCann-Erickson Worldwide in Troy, Mich. "We wanted to make it clear that the new car was coming out of the old one."

In another illusion at the end of the spot, a man pulls down a huge curtain with a pastoral landscape and road on it, gets in the car and drives into the image. A quick motion blur, an edit of the car on stage, and insertion of the car on the road resulted in the final image.

Plymouth has four spots featuring talking cars. In the Laser spot, the car drives up and down a brick wall, telling a man in a sultry female voice, "Don't try this at home." He asks if he can go for a spin, gets in and the car begins to revolve like a top as the spot ends.

The division needed an image campaign that would also deliver the facts, said Bert Gardner, executive creative director of Bozell in Minneapolis, which created the commercial for the Laser.

"Instead of just doing an image campaign, we wanted to do an image campaign that could be used as retail, one that the dealers would like," Gardner said. "We thought the talking cars would be the image side, and the facts they presented about themselves would satisfy retail needs."

The actor was alone on an empty stage for most of the shoot. The brick wall was painted on the floor and the car drove over it, with scenery reflected at appropriate angles in the windows to produce the illusion of ascension.

Digital computer graphics and single-frame edits were used so the car wouldn't appear to bend as it turned to climb the wall.

"The whole notion of digitalizing everything from video to music and then just working with those digits and never going back to film has allowed us to do a tremendous amount," Gardner said.

"The technology was originally invented to save time, but all it does is open up more options and make things take longer," Gardner said.

The latest project took more than a month, Gardner said.

"It's not easy to make a car speak for itself," he said, "but let's hope it's worth it."

Sleight of hand is the approach in new spots for Plymouth Laser, top, and Lexus ES300, lower.

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.
(1992 models; expires Sept. 30)

Dodge Dakota Club Cab	$300
Other Dakota, DW pickup	$750

incentive WATCH

American Isuzu Motors Inc. announced "Isuzu Winning Drive," a new round of factory-to-dealer incentives that remains in effect until Dec. 31.

The program pays dealers $800 to $1,800 on specified 1991 and 1992 Impulse and Stylus models; $1,500 to $1,800 on selected 1991 and 1992 Troopers and $1,000 to $1,500 on 1991 and 1992 pickup trucks.

Also included is $400 on the 1991 and 1992 Rodeo two-wheel-drive sport-utility and $500 on the Rodeo 4wd. All payments are based on the number of vehicles sold.

Dealers also earn a flat payment of $500 on sales of 1990 and 1991 4wd pickups.

Northwood plans classes with schools in Germany

LIZ PINTO
Staff Reporter

Northwood Institute hopes to add a German flair to its automotive marketing curriculum.

A group of German automotive executives and educators spent a week at the college's Midland, Mich., campus this summer working out details for an international exchange program with Northwood and German colleges.

Northwood, which specializes in management degree programs, already has several hundred students from Canada, Japan, Holland and Czechoslovakia on its three U.S. campuses and last year began an effort to become known in Germany.

"We hope to establish some kind of exchange program with students and faculty from German colleges," said Edgar A. Madden, provost of Northwood's Michigan campus.

"Our recent meetings and the agreements we came to will make the international management dimension Northwood provides all its students stronger, whether from the U.S. or other countries," Madden said.

He said the international program's first appeal will be to sons and daughters of dealers in Germany who would come to the United States to complete their degree on a Northwood campus.

Northwood has campuses in West Palm Beach, Fla., and Dallas, as well as Midland.

"It is advantageous for international students to know as much as possible about the automotive industry worldwide to get a good global sense of the industry and to be better prepared to compete in the future," he said.

A transfer program also is being developed to send American students abroad.

Volvo Finance opens in Canada

MONTVALE, N.J. — Volvo Finance North America Inc. has established a Canadian subsidiary, Volvo Finance Canada Ltd.

The new subsidiary, based in North York, Ontario, will provide leasing and installment loan financing for the 60 Volvo dealers in Canada.

Blockade no bar to output

ROBIN-LYN RAIMEY
Special Correspondent

A protest last week against Canadian government policies by Canadian truckers blocked the Ambassador Bridge that connects Detroit to Canada and affected assembly operations at several Canadian plants.

But despite the problems and sporadic parts shortages, production on both sides of the border was higher than the previous week.

Total U.S. car production last week was 125,710, up 8.7 percent from the previous week. U.S. truck production was up 12.3 percent, at 89,413.

Canadian car production was 26,300, up 3.2 percent from the previous week.

Last week's truck production in Canada was up 3.4 percent at 19,367.

Canadian car production was 79.1 percent higher than last year, and truck output was up 48.2 percent. Ford Motor Co. of Canada was closed by a strike last year, which accounted for the limited production.

The border blockade and unavailability of parts caused General Motors of Canada to send home about 2,500 day shift employees at noon last Wednesday at the Oshawa No. 2 car assembly plant in Ontario and the Oshawa truck plant.

GM's Scarborough, Ontario, truck plant was down Friday because of the blockade.

At Ford of Canada, 4,800 hourly employes worked short weeks as a result of the border problems.

The Oakville assembly plant and the Ontario truck plant in Oakville, Ontario, were affected for one day, and the St. Thomas, Ontario, plant was affected for two days.

Chrysler Canada had two hours of downtime last Tuesday at the Pillette Road plant in Windsor, Ontario, and shut down early on Wednesday and Thursday. The Bramalea, Ontario, plant will be down this week for inventory adjustment.

In the United States, GM scheduled one shift of Saturday overtime at the car plants in Doraville, Ga., and Oklahoma City, and the truck plant in Moraine, Ohio (postal line only). Two overtime shifts were scheduled for Saturday at the Baltimore truck plant.

Ford scheduled daily overtime at the Atlanta and Chicago car plants and at six truck plants — Kansas City, Mo.; Norfolk, Va.; Lorain, Ohio; Louisville, Ky.; St. Louis; and Wayne, Mich.

A shift of Saturday overtime was scheduled at the Kansas City and Louisville, Ky., truck plants.

Chrysler scheduled two eight-hour overtime shifts were Saturday at the Belvidere, Ill., car assembly plant, the Newark, Del., car plant, the Dodge City truck plant in Warren, Mich., and the Jeep plant in Toledo, Ohio.

Honda: Civic avoids duty

ALLISTON, Ontario — Honda Canada Inc. says the 1992 Civic hatchback, which goes into production Nov. 4, will meet local content requirements allowing it to be exported to the United States without paying duty, but officials did not offer figures.

Honda says the current hatchback meets the 50 percent domestic content required to avoid a 2.5 percent import duty, but U.S. Customs has acknowledged that it is investigating the issue.

The *New York Times* last summer published parts of an interim Customs report that seemed to challenge Honda's content claim.

At a press event here last week, Honda Canada officials said they expect to receive the final report in mid-October.

Base Skylark rises $2,835

FLINT, Mich. — Prices for the Buick Skylark, which received a major redesign for the 1992 model year, will start $2,835 higher than the 1991 base model, Buick announced.

Chrysler nears financial aid

Reluctant Mitsubishi may buy Diamond-Star soon

MARY ANN MASKERY
and MARY CONNELLY
Staff Reporters

Mitsubishi Motors Corp. will decide "in the near future" whether to buy sole ownership of its joint-venture factory with Chrysler Corp., according to Mitsubishi President Hirokazu Nakamura.

The sale of Chrysler's half of Diamond-Star Motors Corp. could come at the same time as Chrysler goes to the stock market to try to raise more than $300 million.

As early as this week, the company may price 56 million new common shares. That sale continues despite gloomy reports from the analysts of two of the investment bankers that were picked to underwrite the issue, and despite a roughly 20 percent drop in Chrysler's share price since the offering was announced.

Nakamura said Mitsubishi is not anxious to change the 50-50 venture in Illinois. But he suggested that Mitsubishi might buy out its American partner to help Chrysler through its financial pinch.

To raise more cash, Chrysler executives have also expressed interest in selling their company's remaining 10.99 percent stake in Mitsubishi Motors. But Nakamura said, "Equity is not part of the discussions."

Chrysler is trying to raise cash or shed debt on several fronts.

For months, Chrysler has shopped around its Chrysler Financial Corp. subsidiary and some parts-making operations.

Diamond-Star has a 240,000-unit capacity split 50/50.

Mitsubishi "has taken a passive stance" on the purchase of more or all of the venture, Nakamura said last week in an interview. The company is "simply responding to suggestions from the other company."

Any change in the 50/50 Diamond-Star partnership would reduce Chrysler's costs because the U.S. company would shed responsibility for the debt that capitalizes the plant and for future tooling costs.

Chrysler has been trying to strengthen its balance sheet. Last week, executives led by Chairman Lee Iacocca completed the last leg of a three-week trans-Atlantic tour to tout the company's prospects and peddle 33 million new

U.S.-bound Bluebird

Nissan launched its all-new Bluebird family in Tokyo last week and said this sedan version will go on sale in the United States next fall. The Bluebird line is sold as the Stanza in the United States, but the name may be discontinued when the new model arrives. Story on Page 4.

U.S. parts firms turn up heat on Japan

MAX GATES
Staff Reporter

WASHINGTON — U.S. auto parts manufacturers are asking trade officials to turn up the pressure on Japanese automakers by preparing — but not filing — charges of unfair trade practices.

The President's Export Council, a group of business and government leaders that advises the administration on trade policy, last week asked the U.S. Department of Commerce to put together the paperwork for an unfair trade practices complaint against Japanese automakers. The council acted

GM tests quick service program

PHIL FRAME
Staff Reporter

General Motors is about to launch a test program to see if its dealers can grab more of the $107.3-billion-a-year parts and service market.

The "Service as a Product" program begins Oct. 1 in Columbus, Ohio.

The program aims to help dealer service departments compete with independent shops in convenience and price — even for such products as quick oil changes and tuneups, said John D. Rock, GM vice president of customer sales and service.

Dealers in the program will:

- Open their service departments on nights and weekends
- Quickly perform oil changes, tuneups, brake jobs and other routine maintenance while people wait
- Provide free transportation to people who can't wait.

The program targets buyers of

see SERVICE, 37

GM's John Rock said the program is at least partially in response to concerns that thousands of dollars are slipping through dealer fingers.

20 years of price hikes

Inflation, U.S. regs fed huge increases

JOHN K. TEAHEN JR.
Senior Editor

A 1992 Mustang for less than the 1972 price?

Sounds impossible, but it's true. It's an illustration of the strange games that inflation, government regulations and equipment changes have played with auto prices during the last 20 years.

Automotive News analyzed new-car prices for 1992, for 1982 and for 1972, and the study produced some expected and unexpected results.

In the "expected" column, car prices have gone up a lot. No surprise there. Everyone knows that prices have doubled or even tripled since the early 1970s.

Guess again. Most new autos cost four to five times as much as they did in 1972.

On the "unexpected" side was the tremendous impact of inflation and government regulations on safety, emission control and fuel economy on auto prices. There was no question that those elements have boosted stickers, but the extent was greater than one might have surmised.

Take another look at that Mustang. It carried a sticker of $2,679 in 1972. Now, it's $10,215, nearly four times as much.

But inflation and government regs have propelled that $2,679 price to $7,876.

And today's Mustang has a wealth of standard equipment that 20 years ago cost the buyer extra: items like power steering, power brakes, five-speed transmission, AM/FM/stereo, console, tinted glass and a number of less-expensive niceties. Putting them on the 1972 Mustang (at the 1972 option price) and adjusting for inflation adds $1,981 — after deducting for

Probing the new Ford coupe

Ford is preparing a redesigned Probe for introduction next year as an early 1993 model. This lightly disguised prototype shows the new car to be noticeably lower than the current model, particularly in the hoodline. Shorter springs on the front struts allowed designers to eliminate the hood blisters. The new Probe will retain the wrap-around glass side windows and rear hatch. Inside, an air bag allows elimination of the motorized seat belt system.

latenews

CONTINUED *from* PAGE 1

The base 1992 Skylark coupe and sedan are $13,560, which is just $305 less than the most expensive 1991 Skylark. The 1992 Skylark Gran Sport coupe and sedan are $15,555, which is $965 more than the 1991 Gran Sport coupe with then-optional anti-lock brakes.

ABS is standard on all 1992 Skylarks.

In 1991, Skylarks started at $10,725 for the base sedan and topped out at $13,865 for the now-discontinued Skylark Luxury Edition sedan.

Legislation to curb Japan rumored in Washington

WASHINGTON — Talk of new legislation coursed through the capital late last week.

Sources in the office of Rep. Sander Levin, D-Mich., said he may be ready as early as next month to introduce legislation designed to get U.S. suppliers a bigger portion of the Japanese auto parts market.

And while the legislators would not confirm it, *USA Today* reported that Sen. Donald Riegle, D-Mich., and House Majority Leader Richard Gephardt, D-Mo., are working on legislation to limit the number of Japanese brand cars, whether imported or built in North America.

Chevy to start sales staff retention program Jan. 1

FORT WORTH, Texas — Chevrolet has officially announced a General Motors salesperson retention program. Chevrolet is the lead division in the program.

Jim Perkins, Chevrolet general manager, said the Salesperson Career Builder Program will start Jan. 1 and is expected to eventually include some 6,500 GM dealerships and 50,000 salespersons.

Seeking to reduce annual turnover rates as high as 80 percent, GM divisions will pay $50 per vehicle sale to retail salespersons. At Cadillac, the figure is $75 per vehicle.

Salespersons must stay continuously employed at the dealership for three years to collect accrued earnings. Dealer participation is voluntary. To participate, dealers must contribute $25 of the $50 or $75 paid out to their salespersons and enroll all their salespersons. If dealers sell more than one GM make, they must sign up the salespersons for all the GM car or truck lines they sell.

Chrysler workers OK 3 shifts on minivans

WINDSOR, Ontario. — Workers at the Chrysler Canada Ltd. minivan plant have overwhelmingly approved a proposal for a three-shift schedule at the plant.

Members of Canadian Auto Workers Local 444 voted 98 percent in favor of the proposal, to be instituted if future demand warrants squeezing more production from the plant. Workers would get eight hours pay for seven hours work under the three-shift system.

Chrysler spokeswoman Lori McTavish said no target dates have been established for three-shift operation.

A week earlier, UAW Local 110 members at Chrysler's St. Louis minivan plant ratified a three-year contract that permits three-shift perations there. That pact covers about 3,500 hourly UAW workers. The three-shift plan is scheduled to begin in January in St. Louis.

Fiat Group profits fall 41 percent in first half

FRANKFURT — Showing the effects of a continuing loss of European market share by its cornerstone automotive unit, Italy's Fiat Group reported late last week that pretax earnings for the first half ended June 30 slid 41 percent from a year earlier.

Fiat attributed the fall, to the equivalent of $1.16 billion, to sluggish European car demand and the company's falling share in Italy, its major market. Revenue slipped 2.7 percent to $21.9 billion, Fiat said.

Fiat said its unit volume in the period slipped 8 percent from a year earlier, to 973,000. The company's Europe-wide market share fell to an estimated 12.5 percent in August, down a point from a year earlier.

EPA releases fuel economy guide

WASHINGTON — The EPA released preliminary fuel economy figures for 1992 model year cars and trucks today, and it was little changed from last year. CAFE numbers continue to deteriorate for the majority of makers.

The 1,875-pound Geo Metro XFi was again the most fuel efficient (53 city/59 highway) car sold in America. And again, the 200-mph Lamborghini Diablo was America's thirstiest (9 city/14 highway) automobile.

Canadian Saturns priced higher than U.S.

TORONTO — Saturn models go on sale in Canada Oct. 3, at prices somewhat higher than their U.S. equivalents, but still very competitive in the Canadian context.

The base SL sedan lists at $9,895 Canadian, about $8,710 U.S. at current exchange rates. In the United States, the 1992 SL sticker is $8,195.

Other Saturn prices in Canada are SL1 sedan, $9,695 ($8,530 U.S.); SL2 sedan $13,895 ($12,200 U.S.) and SC coupe $14,620 ($12,865).

Animal-rights group protests GM tests

ROCKVILLE, Md. — Animal-rights activists threatened to picket General Motors dealerships in 20 states last Saturday.

The Rockville-based organization People for the Ethical Treatment of Animals contends that GM researchers should have been conducting safety experiments using computer models and dummies instead of live animals.

In a statement, GM said it has "conducted only a limited amount of animal testing, but only when alternative methods were not available."

briefly

NADA imports key speaker

For the first time, an import automotive executive will keynote the annual National Automobile Dealers Association convention. Richard Recchia, **Mitsubishi Motor Sales of America Inc.** executive vice president, will speak at the Saturday session when the group meets in Dallas Feb. 8-11. For Recchia, who in the past had been critical of the fact that the keynote spot always went to Big 3 bigwigs, the moment will be sweet.

DOCTORED HUMOR — Lee Miskowski, **Lincoln-Mercury** general manager, passes along the latest joke moving through automotive circles: Why does the U.S. auto industry call the Japanese assembly plants in this country transplants? In hope the main body will reject them.

THIRTY SOMETHING — In six months, **Infiniti** will introduce a new mid-level 3.0-liter sedan that will be sold alongside the M30, G20 and Q45. The new one's digits will be 30, but Infiniti folks are keeping the car's first initial secret until next year. However, at a Mazda press event a slide showing competitors mentioned a car).

FREQUENT FLIER — Clark Vitulli, **Mazda Motor of America Inc.'s** senior vice president, plans to put a lot of miles on his newest model. Vitulli became a first-time dad Sept. 10 when eight-pound Christopher Joseph Vitulli debuted. On Sept. 11, Vitulli applied for Christopher's travel documents. He wants to take the lad on an upcoming dealer trip to Europe.

NOT EXACTLY, BOB — "The consensus in the Bush administration is that the economy has come out of the recession," said Commerce Secretary Robert Mosbacher to the President's Export Council last week. Then he asked the council members, who advise the White House, what they thought. "From the automotive standpoint, the economy is just coasting," said Heinz Prechter, head of ASC Inc., and council chairman.

Poling: stimulate the economy

Ford Motor Co. boss Harold Poling urged the government to stimulate the economy by dropping interest rates more, saying "the risks of doing nothing are probably greater than the risks of taking action."

MOVING DAY? — The buzz among Saab dealers is that **Saab Cars USA Inc.** may move its headquarters from Orange, Conn., to the Atlanta area to be near its cousin, **Lotus Cars U.S.A. Inc. General Motors** Europe owns Lotus and owns half of Saab's Swedish parent company. A U.S. Lotus spokesman said last week, "Nothing has been finalized," but he acknowledged there might be some logic to such a move since "everyone is looking to economize" and both companies are related to GM.

OPERATION WINDY CITY — Desert Storm veterans who work in **Ford Motor Co.'s** Chicago assembly plant and Ford Division General Manager Ross Roberts were among those who saluted the delivery of the 25,000th vehicle sold under Ford's Military Appreciation Purchase Program. It was also the first official delivery of a 1992 Taurus. U.S. Air National Guard Master Sgt. Sam Scinta of Mount Prospect, Ill., took delivery of the blue Taurus GL sedan last Thursday.

July RV sales continue upturn

RESTON, Va. — Wholesale sales of van conversions continue to rebound, with July posting the best monthly showing of the year.

July's 14,400 shipments were still off 10.6 percent from July 1990, according to the Recreation Vehicle Industry Association.

But they were a sharp improvement over the 37.4 percent decline for the first seven months of calendar 1991 during which the industry shipped 118,300 units.

Overall RV shipments totaling 31,700 were off 4.7 percent in July. Shipments totaling 240,100 were off 25.9 percent for seven months.

RVIA expects the rebound to continue throughout 1992.

Converters may hold GM surplus

JOSEPH BOHN
Truck Editor

General Motors still doesn't know where it will stockpile extra van conversion chassis as it prepares to end van production at its Lordstown, Ohio, assembly facility. But officials are leaning toward a plan to have converters stock the extra vans and giving them floorplan assistance.

GM will phase out production of the full-sized Chevrolet and GMC G-van on March 20 at Lordstown. The plant will be converted to build the Chevrolet Cavalier and the Pontiac Sunbird.

G-van production will be transfered to Flint, Mich., but won't begin until August. During the six-month interval, Scarborough, Ontario, will be the only GM plant producing full-sized vans.

GM told converters that Lordstown and Scarborough will operate at maximum overtime this winter to build up inventory for the spring and to offset any shortfall from the Lordstown shutdown.

GM's problem has been where to stockpile the extra units. Officials continue to favor a plan to place the extra units with converters and giving them some kind of floorplan assistance to cover the cost of doing so.

Converters are amenable to the idea, as long as it doesn't cost them money. But converters will still have the problem of trying to outguess the spring and summer markets. Normally, they are not in a position of having to guess their chassis needs and placing orders six months in advance.

"If we project that we'll build 4,000 (van conversions) and the market is soft, we could end up with 2,000 too many chassis," said one converter. But, he added, the bailment companies have been working very well together on trading chassis and dispersing product among themselves.

Van conversion chassis normally account for about 40 percent of GM's full-sized van sales.

GM also will have to devise a plan for handling extra stocks of full-sized passenger vans.

Opel to sell new Trooper

Isuzu, GM discuss new V-8 for U.S.

RICHARD JOHNSON
Staff Reporter

TOKYO — Isuzu Motors Ltd. will supply General Motors with a new upmarket four-wheel-drive recreational vehicle for sale in Europe beginning next year, and Isuzu is talking with GM about providing a new V-8 engine for the Chevy Blazer/GMC Jimmy in the United States.

Sources confirm GM Europe will import a version of the forthcoming Isuzu Trooper replacement with an Opel/Vauxhall badge.

The new Opel/Vauxhall will be called Monterey and will arrive in Europe in mid-1992, probably debuting at the Geneva auto show. Engine offerings will include a multi-valve 3.2-liter V-6.

GM Europe's off-roader will be pitched above a derivative of the Isuzu Amiga/Rodeo being introduced this fall in two- and four-door bodystyles. The smaller version is sold as the Opel Frontera.

Isuzu, which is 37.5 percent owned by General Motors, supplies cars sold as the Geo Storm in the United States. In Japan, Isuzu markets Opel vehicles.

Isuzu is expected to launch its new Trooper at next month's Tokyo show. It is larger, rounder and more upscale than its predecessor. It will arrive in the United States next year.

The Opel Frontera is produced at IBC Vehicles Ltd., the GM/Isuzu joint venture in Luton, England. Along with Frontera, which is powered by an Opel engine, the factory builds Isuzu and Suzuki light trucks. The Monterey will be exported directly to European markets from Japan.

Isuzu and Opel also are rumored to be co-developing a light truck based on the Isuzu Fargo, using GM Europe powerplants. That model would also be produced at IBC, beginning in 1993 or 1994.

Meanwhile, Isuzu may supply GM in the United States with a new modular V-8 engine it is developing. The Isuzu powerplant would be fitted in the GMC Jimmy/Chevy Blazer 4wd sport-utility series.

Sources say no decision has been reached. "We are exploring opportunities with Isuzu, but nothing is concrete," said a GM official.

Some Car Dealers Love To See Themselves On TV. Others Love To See A Lot Of Buyers In Their Showroom.

Okay, we admit. Running in newspaper won't make you a tv star, but it sure could add some sparkle to your bottom line. Because when it comes to buying a car, that's where the real decisions are made. In fact, people say the only thing they rely on more for purchasing information are dealer brochures. (And just try delivering those to 63 million people every day.)

Fact is, if people are looking for wheels, they're shopping the newspaper. Studies show it's the primary source for automotive trends. Pricing. Financing. Oh, and lest we forget, dealer selection. So the choice is up to you. If you want to be a tv star, you should be in Hollywood. If you want to sell cars, you should be in newspaper.

Newspaper. It's The Best Way To Close A Sale.

Source: Response Analysis Corp., as reported in "Real Estate/Employment/Automotive Classified: A Study Of Prospect Status, Readership & Interest," 1986; Mantz, as reported in "New Vehicle Purchasers: Who They Are & How They Buy," 1988

For more information on how newspaper can help you close the sale, call Jim Wilson at (212) 704-4503.

RETURN

Ford's Walter Hayes joins Aston Martin

continued from PAGE 3

concurs that Hayes was the logical choice to fill the Aston Martin spot.

"Walter knows Europe superbly well. And he loves cars," Poling said last week.

Hayes acknowledged that he is taking over during a difficult period. Aston Martin has cut its work force by 135, to 400 workers, and production of the handcrafted car has been cut to three a week. At peak, Aston Martin can make six cars a week.

Things are bad, but then Lotus, Rolls-Royce and Ferrari are not "jumping with joy" either, Hayes said.

Rolls-Royce production is down 60 percent, and the automaker's recent losses have wiped out the profits of the parent company.

"Within this market, compared with our competitors, we are doing better," Hayes said.

Walter Hayes, a former Ford of Europe vice chairman, will lead Aston Martin in a difficult period.

The supercar market, as he calls it, is going through a challenging time, but he firmly believes "the classic and vintage automobile may be modified, but it will not disappear."

Hayes is optimistic that when the car market improves, even the high-end market will turn around.

"Everybody is reappraising the future of this market. I happen to think it will always be there," Hayes said.

Hayes said he will quickly reach a decision on whether to go ahead with the launch of a new car, code-named Project DB1999. The car, a down-scale Aston Martin, would be built in volumes of 600 to 700 cars a year.

"In the longer term, I agree there is a place in Aston's future for a car placed somewhere differently in the market, perhaps somewhere to the bottom of upscale," Hayes said.

At the British auto show next October, Aston Martin will launch a new Vantage. AN

NADA director folds, resigns

CHARLES M. THOMAS
Staff Reporter

A stubborn recession followed by a stumbling recovery has affected the National Automobile Dealers Association by forcing the closure of one of the nation's oldest Chevrolet dealerships and resignation of director Edward Scuncio.

Scuncio, president of Scuncio Chevrolet in Greenville, R.I., folded his dealership Sept. 3. The single-point, family owned dealership is being liquidated by a state-appointed receiver.

Rhode Island's banking crisis contributed to the closure of the dealership which opened in 1926, according to Scuncio.

"The banking crisis in Rhode Island played a role in the closing of the dealership," he said. "The crisis is creating havoc in the state."

Forty-five financial institutions were padlocked in January. More than 350,000 accounts containing $1.3 billion are frozen in the closed institutions. Each deposit has had a ripple effect among families, businesses and workers. Scuncio has accounts frozen in one of the closed financial institutions.

Respected by associates as a smart auto dealer, Scuncio was a nine-year NADA Region 1 vice president. He stepped down after closing the dealership. Aldo Sammartino, owner of Bay Buick in East Greenwich, has replaced him.

Asked if he will return to the automobile business any time soon, Scuncio quipped: "That's like asking a man who just got divorced if he will remarry again." AN

Fleets may get clean air credits

MAX GATES
Staff Reporter

WASHINGTON — Car fleet operators that pollute less than the law allows may bank or sell their emission credits under rules proposed by the EPA.

The credit program is designed to give fleet operators flexibility to meet 1990 Clean Air Act amendments. The law calls for fleet owners in areas with excessive air pollution to start buying low-emission vehicles by 1998.

Fleet operators could collect credits for exceeding the Clean Air requirements — either by buying more low-emission cars and trucks than required or buying them earlier than mandated. Those credits could be saved to offset future fleet emission excesses or sold to other fleet operators who need credits.

The rules affect fleets operating in the 21 metropolitan areas of the country with excessive ozone or carbon monoxide levels.

Fleet owners with 10 or more centrally fueled vehicles will be required to have 30 percent of their vehicles meeting lower emission standards than conventional vehicles in 1998. The percentage rises to 70 percent of their fleet in the year 2000, according to EPA spokeswoman Martha Casey.

EPA has yet to set the exact standards for the lower emission vehicles. They could include alternative-fuel vehicles.

The EPA estimates that 1.5 million fleet vehicles in the 21 targeted urban areas would be affected by the rule, about 70 percent in private fleets and the rest in state, local and federal government fleets.

Credit programs also are in place for oxides of nitrogen and particulate matter emissions from heavy-duty engines and for stationary emission sources, such as electricity generation plants. AN

Extended service contract company folds

CHARLES M. THOMAS
Staff Reporter

An extended service contract company operating nationally has collapsed, leaving hundreds of auto dealers and thousands of customers wondering whether their extended warranties are valid.

Extended Service Program Inc., based in Irving, Texas, has filed for bankruptcy in U.S. Bankruptcy Court for the Northern District of Texas in Dallas under Chapter 7 of the U.S. Bankruptcy Code.

More than 65,000 extended service contracts sold by ESP between 1989 and 1991 are still in force. About 3,500 claims have been filed against them so far, according to a spokeswoman for court-appointed trustee Daniel J. Sherman.

She said the company had two insurers: Homestead Insurance Co., based in Hoboken, N.J., and the now-defunct Laramie Insurance Co., which was based in Wyoming before it folded a year ago.

Of the 65,000 contracts, 20 percent were insured by Homestead, which is paying claims, she said.

But Steve Imber, chief lawyer for the Kansas Department of Insurance, said he has received notice from Homestead that only 4,500 certificates were filed pursuant to its contract with ESP. Dealers in Kansas are being paid, but Imber's office is sending each claim to the insurer.

The trustee has no funds to pay repairs on the rest of the contracts, said the spokeswoman. "We are not aware of any reserve fund or bank account whatever," she said.

But included in the bankruptcy filing under assets is a $987,000 loss reserve account: not much to cover at least 65,000 contracts.

E.E. Seely, president of ESP, opened the business in 1973, making it one of the longest-running extended service contract administrators in the industry. He failed to return telephone calls from *Automotive News*.

The company reported assets of $3.9 million and liabilities of about $639,000. Assets include a $2 million lawsuit against Homestead.

Other assets include an airplane in Hawaii valued at $120,000 and an Internal Revenue Service tax refund for $141,000. AN

Serving Over 4000 Dealerships Worldwide Since 1974.

PRICES

Inflation and D.C. fed 20-year increase

continued from PAGE 1

the fact that the 1972 model had a six-cylinder engine and the current car has a four-cylinder.

A driver-side air bag is standard on today's Mustang. It wasn't available in 1972. Call it $800. It all adds up to an adjusted price of $10,657 for the 1972 model. Today's Mustang has a tag of $10,215 — $442 less.

Don't expect Ford Division to advertise those numbers. The customer wouldn't swallow it, and the Federal Trade Commission would demand so many asterisks and explanations that the whole effect would be nullified.

How others fared

Other models in the 20-year comparison didn't fare quite as well as the Mustang, but in every case, the figures show why pricing is one of the most complicated facets of auto marketing.

Other nameplates in the 1992 vs. 1972 comparison are the Oldsmobile Cutlass Supreme, Buick LeSabre Custom, Chevrolet Caprice Classic, Chrysler New Yorker Fifth Avenue, Lincoln Town Car and Cadillac Eldorado.

The sticker prices of those six makes are four to five times what they were in 1972, but the increases range from 17 percent to 30 percent after adjusting for inflation, equipment changes and meeting government mandates.

Additional big-ticket standard equipment includes air conditioning (standard only on the Lincoln Town Car in 1972) and AM/FM/stereo. The Cutlass Supreme also added automatic transmission, power steering and power brakes.

A driver-side air bag now is standard on the Mustang, Caprice, LeSabre, New Yorker and Eldorado, and driver and passenger bags are standard on the Town Car. ABS has been added to the standard list on the Caprice, New Yorker, Town Car and Eldorado.

Costs climb

The costs of meeting government regulations on safety and emission control have been high, and they still are. In the last two decades, every maker that sells cars in the United States has had to meet federal rules on such things as brakes, windshields, door strength, interior glare, lights, mirrors, transmission shift lever sequence, hood latches, door locks and hinges, fuel system integrity and flammability of interior material.

Cars are safer today, but safety has its price.

Emission control is another big item in the cost equation, and it will continue to be. The major breakthrough was the development of the catalytic converter, which debuted on the 1975 autos. The catalyst required more precise and more expensive ignition and fuel-metering systems. And they had to be more durable because of the five-year/50,000 mile warranty on emission-control components.

Increasing corporate average fuel economy hasn't been a penny-ante operation either. It has required new engines, smaller engines, new technology. The race for ever-higher displacement ended. In 1976, Cadillac boasted of its 8.2-liter V-8 (500 cubic inches). Today, Cadillac is able to function quite nicely with a 4.9-liter (about 300 cubic inches) V-8.

The CAFE standards took effect in the 1978 model year with a mandate of 18 mpg for cars; it's now 27.5 mpg. In 1974, General Motors' passenger-car fleet averaged 12 mpg.

Why no small cars in the 20-year analysis? Why no imports? The study had to be limited to cars that were offered in 1972 and are still on the market. Not all of those lines are included, but the seven are representative of those eligible. None of today's domestic compact and subcompact nameplates was around 20 years ago.

1992 vs. 1982

The Dodge Colt and the Toyota Corolla were in the picture in 1972. Base prices are available, but lists of standard equipment and option prices are not; hence, no comparison. All of the other popular-priced import nameplates arrived on these shores after 1972.

The important word in the comparisons is nameplate. Toyota was here with the Corolla, but the Tercel and the Camry were nowhere to be found. Honda had a tiny 600 series, but the Civic didn't show up until 1973. The Accord bowed in 1976. Nissan (Datsun in those days) was on hand, but the Sentra wasn't.

In the 1992 vs. 1982 price comparison, *Automotive News* expanded the list to 15 models. It comprises the seven already discussed, plus the Ford Escort, Chevrolet Cavalier, Dodge Colt, Toyota Tercel and Corolla, Honda Civic and Accord and Nissan Sentra.

Base prices show increases of 34 percent to 70 percent on the foreign-badged lines and on the Cavalier, Escort and Mustang and hikes of 74 percent to 94 percent on the Cutlass Supreme, Eldorado, Town Car and New Yorker. The LeSabre Custom and the Caprice Classic have more than doubled during the period; the LeSabre Custom is up 111 percent, and the Caprice Classic has climbed 130 percent.

Once again, it's a different story when the 1982 prices are adjusted for inflation, government regulations and new standard equipment. Then, the 1992 Colt, Mustang and Cavalier are less than the 1982 models, and the other 1992s are up 3 to 30 percent.

Pricing history

A review of auto pricing during the last 20 years finds two periods of considerable contrast: frenzied activity from 1972 through 1981 and a time of relative calm since then.

The 1972-81 span included a price freeze, price control, elimination of the federal excise tax, a surtax on imports, the beginning of "sticker shock," rebates to custom-

Don't you wish you'd bought a '72 Rolls?

JOHN K. TEAHEN JR.
Senior Editor

A lot of rich folks passed up a real bargain back in 1972. They didn't buy a Rolls-Royce.

In those days, the Silent Monarch of the Highway carried a sticker of $25,200 for the Silver Shadow four-door sedan. The 1991 Silver Spirit II four-door is $151,700, and its price is sure to rise when the 1992 model is priced. And don't forget the luxury tax on the portion of the price above $30,000. That's another $12,170 on the 1991 car.

Even state sales tax is a major item at the Rolls level. In Michigan, it's 4 percent. Add $6,068 to the bill.

But don't worry about the gas-guzzler tax. It's $6,400 today, but it's included in the sticker.

There was no such levy 20 years ago.

And think of all the money the owner would have saved by not trading every two or three years. One doesn't ditch a Rolls-Royce that often.

In 1972, as in 1992, a Rolls was a completely equipped motor car: automatic transmission, air conditioning, premium sound system, every power assist imaginable, luxurious interior. Today's Silver Spirit has an air bag and anti-lock brakes as well.

Of course, that 1972 Silver Shadow was considerably more than $25,200 in 1992 dollars; perhaps $77,000 after allowing for inflation and the safety and emissions gear mandated by the U.S. government in the 20-year span. Extra standard equipment isn't a major factor; aside from the air bag and ABS, not much could be added.

So that 1972 Rolls-Royce was a real steal. And it might still be purring along today for those prescient car buyers who made the investment.

From '72 to '92, consumer prices went bananas

JOHN K. TEAHEN JR. and CHRIS ESCHENBURG
Automotive News

Ever wonder just how much prices have risen in the last two decades?

In its 20-year study of new-car stickers, *Automotive News* also looked at 1972 and current prices of major home appliances, a few items from the supermarket and the wages of auto workers.

Aside from bananas, the percentage of increase in new-car prices is the highest on the list.

There are reasons. There has been no appreciable change in cows and chickens since 1972. Home appliances have been improved, and the household standbys, like the items on the grocery list, have been rocked by inflation. But none has had to contend with the quadruple forces of inflation, safety standards, emissions controls and corporate average fuel economy regulations.

Product improvement has boosted the prices of cars, just as it has played a part in the pricing of washers, dryers and TVs. The product today that the consumer drives away or lugs to his family room, basement or kitchen is a lot more sophisticated and dependable than its 1972 counterpart.

That's called technological advancement. And it costs money.

The promotion of optional goodies to the status of standard equipment is another important factor in the increase in auto prices. Numerous mechanical, comfort/convenience and appearance features that once were extra-cost options now are standard. The automakers don't give those things away for free.

The Oldsmobile Cutlass Supreme is one example. The *Automotive News* study found that a net of about $1,100 worth of equipment (at 1972 prices) has been added. Adjusted for inflation, that's about $2,500.

Wages have climbed substantially. General Motors estimates that the average hourly stipend of its entire hourly work force has risen from $6 in 1972 to $22.23 today. That's 271 percent. GM says the total hourly package, including all employment costs, is $31.30 vs. $7.55, up 315 percent.

The $22.23 hourly rate means that a GM worker must work 17.7 weeks at 40 hours a week to buy a 1992 Cutlass Supreme at $15,695. In 1972, it took that worker 13.6 weeks at 40 hours per week to buy a $3,258 Cutlass Supreme.

It's another way of keeping score, but some price analysts consider that statistic pretty meaningless.

The worker can buy a car in 17.7 weeks if he doesn't pay any withholding tax, doesn't make his mortgage and car payments, doesn't pay his utility bills, doesn't buy a scrap of food and doesn't spend a dime for anything else. Life doesn't work that way.

This question arises: If people can buy cars in 18 weeks, why do they finance them for 60 months?

THEN AND NOW

	Current price	1972 Price	Percent of increase
1992 Mustang LX	$10,215	$2,679	281
1992 Olds Cutlass Supreme	15,695	3,258	382
1992 Buick LeSabre Custom	18,695	4,047	362
Auto worker (avg. hourly wage)	22.23	6.00	271
Auto worker (total hourly benefits)	31.30	7.55	315
GE automatic washer	330	168	96
GE automatic dryer	260	128	103
RCA color TV (19-inch)	300	130	131
Bananas (pound)	0.49	0.10	390
Medium eggs (dozen)	0.83	0.49	69
Vitamin D milk (gallon)	2.49	0.89	180
Sirloin steak (pound)	3.99	1.48	170
Inflation (1991 vs. 1972)			224

Data on auto worker wages was supplied by General Motors.
Food and appliance prices are prices at Detroit-area stores in September 1991 and September 1972.

PRICES

Consumers adjust to sticker shock

continued from PAGE 34

ers, major reductions in the dealer discount and, finally, "interim pricing."

It was fun and games just about every day for the people who price cars and for the people who chronicle those actions.

On Aug. 15, 1971, President Nixon disclosed his economic program to get the economy back on its feet. Major items for the auto industry were a 90-day freeze on prices and wages, an increase of 6.5 percentage points in the duty on imported cars (the new rate was 10 percent) and a recommendation that Congress repeal the 7 percent excise tax on cars, retroactive to Aug. 15.

The imports took another kick in the teeth with the temporary suspension of the full convertibility of the dollar into gold. In other words, devaluation. Imports, however, were permitted to raise prices to offset the effects of currency fluctuation.

GM had already announced its 1972 prices; it rescinded the increase. Other makers made no increases, which brought about the unusual situation of a model year opening without a price hike.

After the price freeze, automakers were allowed to raise stickers, but they had to obtain approval from the federal Price Commission. Increases were granted to cover higher costs, but there was to be no profit included. The industry was freed from price control in December 1973.

The excise tax died Dec. 10, 1971, and car prices went down $113 to $424. The import surcharge was rescinded 17 days later. The U.S. Treasury collected $59 million on autos under the levy, $430 million on all imported goods.

Sticker shock

Suddenly it was time for the 1975 models, and GM announced a price hike averaging $426, or 8.5 percent, on its cars. Ford Motor Co. and Chrysler Corp. fell in line, and the term "sticker shock" entered the automotive lexicon.

A $400 increase would pass almost unnoticed today, but the average price of a new car was less than $5,000 in 1975, so $400 was big money. Sales collapsed after the Big 3 blockbuster, and customer rebates became the order of the day. Remember Joe Garagiola chanting "Buy a car, get a check" for Chrysler every time you turned on the TV?

But sticker shock was stronger than rebates, and 1975 sales dipped 5.4 percent from 1974. And sales in 1974, the year of the first Arab oil embargo, were down 23 percent from 1973.

The dealer discount has always been sacred to auto dealers. It's the difference between the retail price and the dealer's price, expressed in percentage. In dollars, it represents the dealer's trading margin.

On the 1976 models and again on the 1981 models, the domestic makers slashed those percentages. It meant more money for the factories and a smaller profit opportunity for the retailers, and it was as popular as ants at a picnic.

The discount erosion began during price control when the makers were allowed to raise prices the same amount at wholesale and retail. That suspended the mathematical relationship of discount and markup, thereby reducing the discount. That so-called "pass-through" cut the discount as much as 1.5 percentage points on some lines.

Interim pricing

In 1976, GM reduced the discount 0.5 to 2.1 percentage points on some of its cars, and in 1981, GM slashed the discount 4 to 6 percentage points on standard-sized and luxury lines.

What does that mean in dollars? GM announced an average increase of $176 on its 1981 models, but the company acknowledged that the increase would have averaged $526 if the dealer discount had not been reduced.

And then there was interim pricing. It was invented by GM in the 1979 model year and was adopted by Ford and Chrysler. An auto price analyst explained it this way: "They decided that if one price increase a year was good, four price increases a year were four times as good."

Every quarter, car prices went up. In the 1980 model year, for example, Chrysler had five increases for a total of $867; Ford had four for $751, and GM had four for $798. In addition, Ford boosted destination charges three times for a total of $30, and GM hiked them four times for $50.

Since 1982, the price pot has bubbled a bit less frantically. There have been the annual increases at introduction time and several mid-model boosts.

Currency blues

In 1982, equalization of destination charges was adopted. A specific model had the same destination (freight) charge everywhere in the United States. GM did that on some of its 1981 models and put it into effect across the board for 1982. In earlier years, the destination charge for a specific model varied by area, based on a dealer's distance from a central zone, usually the division's headquarters.

The Japanese imports tried a little interim pricing of their own in the mid-1980s as the yen strengthened against the dollar. From the fall of 1985 to the spring of 1986, Toyota, Honda, Nissan and Mazda posted increases averaging $1,028 per car, or 10.7 percent — and the Japanese weren't in the luxury car market in those days.

In the summer of 1985, the yen traded at 240 to the dollar; in mid-March of 1986, it was 176.

Currency fluctuation continues to buffet the Japanese, and prices have shown the effect. Last week, the exchange rate was 133 yen to the dollar.

The currency situation has been a big factor in the transaction price of imported cars topping the price of domestic cars. The imports moved to the fore in 1982 and have stayed on top ever since.

The Commerce Department's Bureau of Economic Analysis estimates that in the second quarter of this year, average transaction prices were $15,954 for domestic cars, $17,281 for imported cars and $16,323 for all cars.

*New model for 1992
Prices of the 1992 RX-7 will be announced later.

Mazda price increase averages 3.1% on 1992s

IRVINE, Calif. — Mazda Motor of America Inc. last week announced a sales-weighted price increase averaging $570, or 3.1 percent, on its 1992 cars and trucks.

The biggest boost is on the redesigned 929 four-door sedan, which carries a sticker of $27,800, up $3,950 over its 1991 predecessor. (Product story is on Page 16).

New to the 1992 lineup is the MX-3, a sporty three-door hatchback tagged at $11,000. A GS version is $13,800.

The popular Miata convertible is $14,800, up $500.

Mazda also has added two-wheel drive models to the Navajo sport-utility, which is built by Ford Motor Co. Starting price is $15,795. A 4wd Navajo DX joins the line at $17,595, compared to $19,295 for the LX four-wheeler.

The LX is up $1,460 over 1991.

Ford revises '92 car prices

JOHN K. TEAHEN JR.
Senior Editor

In posting firm prices for its 1992 cars, Ford Motor Co. revised its pre-introduction stickers on all lines except the Ford Escort and the Mercury Tracer.

But the biggest changes were on the Mustang. Prices of the base L coupe and hatchback now are unchanged from 1991. They had been scheduled to rise $508. Ford added another $111 to the price of the Mustang L convertible; it's now $619 more than last year. Other Mustangs were reduced from the pre-intro level, but they are still above the 1991 stickers.

The Ford Crown Victoria and the Mercury Grand Marquis and Capri were priced for the first time in the 1992 model year. The base Capri ragtop rose 5.6 percent, and the Grand Marquis sedans jumped about 4.5 percent. The base Crown Victoria went up 4.5 percent, and the LX climbed 6.9 percent. The Grand Marquis and Crown Victoria were introduced as 1992 models last spring.

Elsewhere, all models are higher than their pre-introduction prices except the Lincoln Town Car and Continental.

Ford Motor said its 1992 car prices are 3.5 percent higher than comparably equipped 1991 models. *Automotive News* estimates the increase at $590. The pre-intro boost was 3.7 percent, or $625.

Ford has reduced the prices of anti-lock brakes for 1992. The option is $595 on Taurus and Probe and $695 on Thunderbird and Crown Victoria. The 1991 prices were: Taurus, $985; Probe, $924; Thunderbird, $1,085; and Crown Victoria, $1,035.

*New model for 1992
These prices replace the pre-introduction prices sent to dealers in mid-July.

Hocus-pocus on prices generates comic relief

JOHN K. TEAHEN JR
Senior Editor

As car prices have risen, automakers have adopted a number of ploys to mask the full extent of the hikes.

At the introduction of the 1986 models, the Big 3 stopped mentioning the dollar amount. Press releases said simply that prices had been increased an average of 2.8 percent or whatever. The reason was simple. Prices had reached the point that even a 2.8 percent hike represented more dollars than the manufacturers cared to mention.

It was like the ostrich hiding its head in the sand, and it was just as effective. Because of its extensive files on pricing history, *Automotive News* has always been able to compute the dollar increase.

But the game has not been without its comic relief.

A few years ago, when asked for the dollar figure, a public relations practitioner for a Big 3 company replied innocently, "There *is* no dollar amount, just a percentage."

The *Automotive News* price analyst was nonplussed for a moment by the utter absurdity of the statement. Then he gently informed the Big 3 neophyte, "Young man, you can't have one without the other." The tale has become part of the price lore at *Automotive News*.

Ford, GM alter rebates, include '92s

ARLENA SAWYERS
Staff Reporter

Ford Motor Co. and five General Motors divisions announced revised incentive programs last week to replace those that expired Sept. 25.

All include 1992 models.

Also, **Chrysler Corp.** extended until Oct. 4 its current round of incentives, which were to expire today.

Incentives on 1992 **Ford** cars are $500 to $1,000; 1992 **Mercury** cars, $500 to $750, and 1992 **Ford trucks,** $500 to $1,000.

The rebate on all 1992 **Lincolns** is $1,000.

Rebates are $400 to $1,000 on 1990 and 1991 Ford cars, $400 to $1,000 on 1991 Mercury cars, $2,000 on all 1991 Lincolns and $400 to $1,000 on 1990 and 1991 Ford trucks.

The alternative financing is 7.9 percent for contracts up to 48 months on Ford and Mercury vehicles with some exceptions.

The finance rate on the 1990, 1991 and 1992 Probe and the 1990 and 1991 Festiva is 4.8 percent.

Also, rebates and/or finance rates on the 1992 Escort, Tempo, Tracer and Topaz and the 1990, 1991 and 1992 Aerostar vary in some regions. Cut-rate financing is not available for Lincoln.

All the Ford Motor programs will expire on Dec. 3.

Chevrolet's program includes consumer cash on 1991 and 1992 cars and trucks. A $500 rebate on the 1991 and 1992 Lumina coupe and sedan does not apply in some Western states. On 1991 and 1992 cars, the incentives are $300 to $1,000. The incentive range on 1991 trucks is $500 to $1,500. On 1992 trucks, it is $500 to $1,000.

Pontiac's revised program pays consumers $750 to $1,000 on some 1991 cars, $500 to $750 on 1992 cars and $1,000 on the 1991 and 1992 Trans Sport.

The consumer rebate program offered by **Buick** includes no 1991 models. The new program pays $250 to $1,000, based on the option package selected, on the 1992 Century, Regal and Skylark. The rebates on the 1992 Riviera is $2,000.

Oldsmobile is offering a $1,000 consumer rebate nationally on the 1992 Cutlass Ciera and $500 to $2,000 on other 1991 and 1992 vehicles — depending on the model and area of the country.

GMC Truck is offering consumer rebates of $500 to $1,000 on 1992 trucks and $500 to $1,500 on 1991 trucks.

Cadillac did not announce a new program last week.

In lieu of rebates, Pontiac, Buick and Oldsmobile are offering cut-rate financing of 4.9 percent to 10.9 percent, depending on contract length.

The alternate finance rate for Chevrolet and GMC Truck is 6.9 percent for up to 48 months.

Chevrolet, Pontiac, Buick, Oldsmobile and GMC Truck incentives expire Feb. 4.

XT, XT6 (1991)	$2,000

Ford cars, buses are recalled

DEARBORN, Mich. — Ford Motor Co. is recalling Ford Taurus and Mercury Sable models sold in cold-weather states to check front brake rotors and school buses to check for faulty steering gears.

About 400,000 1986 and 1987 Taurus and Sable models currently registered or originally sold in the Northeast and Great Lakes states will get new front brake rotors. Extensive usage of calcium or sodium chloride road salts may cause severe corrosion of the rotors.

Recalled cars are in the following states: Connecticut, Illinois, Indiana, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Vermont and Wisconsin.

About 3,074 1988 model buses built on B-series chassis are being recalled. Ford said the steering gear could contain parts with machining variances that could cause steering problems.

Ford to build CNG trucks

SAN FRANCISCO — Ford Motor Co. will begin building limited numbers of compressed natural gas pickups for the 1992 model year.

Ford Chairman Harold A. Poling made the announcement in a speech to the Bay Area Council. Initially, the roughly 100 vehicles will go into centrally fueled fleets. Most of these will be sold to gas utilities and their customers — half to California utilities. The rest will go to other U.S. and Canadian customers.

The company has entered into a $23 million joint development program with the Gas Research Institute and Southern California Gas Co. Ford reports that if all goes well an additional 600 natural-gas pickups will be built in 1993 and 1994.

GMC Truck's plans to build natural-gas-powered 1992 Sierra pickups are detailed on Page 22.

Rockwell, Mazda form venture

TOKYO — Mazda Motor Corp. and Rockwell International Corp. said last week they have joined with two Japanese component suppliers to set up an auto parts joint venture in Japan.

Newly formed Nippon Automotive Body Systems Co. plans to spend 2.3 billion yen (about $17.3 million) to build a plant about 20 miles east of Hiroshima to produce such parts as sliding sunroofs, door latches and window regulators. Construction will start early next year, with operations beginning in 1993.

Nippon Automotive, which will be capitalized at $3.4 million, will be 36 percent owned by Rockwell, 34 percent by Mazda and 15 percent each by Imasen Electric Industrial Co. and Delta Kogyo Co.

The chairman of the new company will come from Rockwell, with Mazda providing the president and administration. Production technology will come from Imasen Electric Industrial and Delta Kogyo will be in charge of manufacturing.

PARTS

Parts makers want pressure on Japan

continued from PAGE 1

at the request of the Auto Parts Advisory Council, an independent group representing domestic suppliers.

"We're not recommending that the charges be filed now. We're recommending that the department prepare for it. In case this problem is not resolved, they're ready to take action," said Heinz Prechter, chairman of the export council and ASC Inc., a Southgate, Mich., supplier.

The recommendation will be sent to the Commerce Department for consideration. "We're not asking for a formal response," said Robert Cole, a parts council executive.

U.S. and Japanese officials have been discussing the parts trade since 1986, when the United States had a $2.4 billion deficit in auto parts. The deficit is now nearly $11 billion a year.

Commerce Secretary Robert Mosbacher said auto and auto parts sales will make up 75 percent of the U.S. trade deficit with Japan this year and half of the total U.S. trade deficit. Mosbacher said he is anxious to see results of a joint Japan-U.S. study of foreign and domestic content for U.S. and Japanese manufacturers. He particularly wants to know the Japanese content of cars built at U.S. transplants.

U.S. Commerce Secretary Robert Mosbacher wants to know the Japanese content of cars built at U.S. transplants.

"We've got to nail this down. This study will be the basis for going forward with our very important discussions and negotiations with Japan," Mosbacher said.

Officials of the auto parts council appear to be getting impatient.

While the joint U.S.-Japan study, which is expected sometime next year, might pin down imbalances in the auto parts markets, "We've had all the background since April of this year," said Cole. "The trade data are not improving."

U.S. AND CANADA CAR AND TRUCK PRODUCTION

Vehicles are domestic unless noted. Vehicles are cars unless noted.

Car build surpasses 4 million

ANNE E. WRIGHT
Chief Statistician

Traffic at the Windsor-Detroit border flowed more freely last week after a two-week slowdown by Canadian federal workers and a blockade by truckers threatened vehicle production in Canada.

General Motors of Canada lost several hours of production at the Oshawa, Ontario, car and truck facilities and the Scarborough, Ontario, van plant last week. Saturday overtime was scheduled at each of the plants, and the company plans to make up the lost units in weeks to come.

Meanwhile, U.S. carmakers built their four-millionth vehicle last Friday. In 1990, the four million mark was reached 25 days earlier.

Year-to-date, 4,000,122 cars have been assembled in the United States, down 13.4 percent from 1990.

Last week's estimated U.S. car production was 129,545, up 7.8 over the prior week and down 5.0 percent from last year.

Canadian automakers produced 25,499 cars last week, 2.7 percent above the prior week and 4.0 percent above the 1990 week.

Year-to-date, Canadian auto production is up 2.1 percent over 1990.

Truck production in the United States last week was scheduled at 85,152 units, even with the prior week and up 4.2 percent over the same week last year.

Year-to-date truck production trails 1990 by 17.1 percent.

Canadian truckmakers' planned to assemble 20,257 units last week, 4.9 percent over the prior week and 30.3 percent over the same week last year.

Canadian truck production for the year trails 1990 by 5.3 percent.

Chrysler Corp. scheduled two shifts of Saturday overtime at the Warren, Mich., and the St. Louis (No. 2) truck plants last week.

Ford Motor Co. scheduled overtime last week at 10 assembly plants. The Atlanta; Chicago; and St. Thomas, Ontario, car facilities worked daily overtime as did the following seven truck plants: Wayne, Mich.; Kansas City, Mo.; Norfolk, Va.; Lorain, Ohio; Louisville, Ky.; St. Louis; and Oakville, Ontario. The Kansas City plant was also scheduled for Saturday overtime.

General Motors scheduled nine facilities for Saturday overtime last week. The Scarborough, Ontario; Arlington, Va.; Oklahoma City; Tarrytown, N.Y.; and Oshawa, Ontario (truck) plants were scheduled to work one shift. The Flint, Mich., Lordstown, Ohio, (car and truck) and Oshawa, Ontario, (car) plants were scheduled to work two shifts.

Honda scheduled two shifts of Saturday overtime last week at the Marysville, Ohio, facility, which builds the Accord.

Chrysler trims pre-intro prices

HIGHLAND PARK, Mich. — Chrysler Corp. has raised 1992 domestic car prices an average of 0.9 percent on a comparably equipped basis.

The 0.9 percent increase amounts to an average increase of $138 per car, according to *Automotive News*.

The increase in the firm prices sent to dealers last week is less than the 1.4 percent ($215 per car) tentative increase on domestic cars announced by Chrysler in August.

Chrysler said the cutback reflects the company's widespread use of discount equipment packages and its new Customer Preferred Ordering System. The system tracks the quickest-selling color/equipment combinations on a model-by-model, zone-by-zone basis.

Day heads Rover's parent

LONDON — Rover Group Chairman Graham Day has assumed chairmanship of Rover's parent company, British Aerospace, which is under financial seige.

British Aerospace anticipates profits of $260 million for the year, only half its earlier projection, and is trying to raise money

Honda nabs third in car sales

'91 model year misses 13 million

JIM HENRY
Staff Reporter

NEW YORK — In terms of new-car sales at least, the U.S. Big 3 are now General Motors, Ford Motor Co. — and American Honda Motor Co. Inc.

Honda and Acura cars outsold Chrysler Corp. cars in the 1991 model year.

And Toyota Motor Sales U.S.A. Inc. nearly caught Chrysler in car sales. Combined Toyota-Lexus sales trailed Chrysler by 1,445 units.

But that's comparing apples to apples. Counting apples plus oranges, Chrysler is still No. 3 in the industry when light trucks and minivans are included.

In fact, Chrysler was the only U.S.. manufacturer to gain light-truck market share in the model year. Its combined car and truck sales fell 9.8 percent, matching the industry's decline.

Sales for the entire industry fell 9.9 percent to about 12.6 million units for the model year that ended last week. That includes about 8.4 million cars and 4.2 million light trucks. It was the first time since 1983 that new-vehicle sales dropped below 13 million units.

Ford was the No. 1 car-truck seller, and Ford also was the top light-truck seller. Ford said its new-for-1991 Explorer sport-utility set a model-year volume record for the segment and outsold its next two competitors combined.

Dealers hit Ford parts changes

JOSEPH BOHN
Staff Reporter

Ford Motor Co.'s plan to revamp discounts and incentives on its dealer parts programs is alarming dealers. The plan could cost dealers earning $400,000 a year a quarter of their income.

But Jack Clissold, general sales and marketing manager for Ford Parts and Service Division, said the company is only remixing its parts marketing and distribution funds for greater effectiveness. He said the company will not benefit financially from the program changes.

Supplying on time the thousands of parts dealers need has become

Honda prepares minivan for U.S.

KRISTINE STIVEN BREESE
Staff Reporter

LA JOLLA, Calif. — American Honda Motor Co. executives said last week that Honda is developing a product that will satisfy dealers' desire for a minivan.

"We are working on a minivan. It's just a matter of when," said Takeo Okusa, executive vice president of automobile sales.

In a separate interview, Thomas Elliott, executive vice president of automobile sales operations, said, "We are working on something. Within the next five years we will have a product that will address" dealers' requests for a minivan.

The statements mark a shift in public comments about the prospects of a Honda minivan. In the past, Honda executives have only said they were studying the issue.

And indeed in Japan, a spokesman for Honda Motor Co. Ltd. last week echoed the previous line, saying Honda is "investigating" the possibility.

But the spokesman conceded that under Honda's regional development philosophy, where products are designed in their primary markets, any minivan entry would be designed and developed in the United States.

Elliott: Minivan addresses dealers' requests

"One of the biggest bottlenecks now is that we don't have a facility where we can build" a minivan, the spokesman said. He said a minivan wouldn't necessarily require a new plant, but it would need a new assembly line.

The issue has been a hot one for Honda, which is the only major Japanese automaker in the United States that hasn't offered a van or van-like product. Although Honda's car sales have continually outperformed the industry, Honda dealers have been left out of one of the strongest segments in the in-

Saab moves to Atlanta; CEO quits

JIM HENRY
Staff Reporter

ORANGE, Conn. — Saab Cars USA has torn itself up by the roots, dismissing nearly nine-tenths of its headquarters staff in a shake-up that goes beyond moving to the Atlanta area next year.

The timing of the move is driven by the fact that Saab Automobiles AB and its partner, General Motors Europe, are set to replace the elderly 900 model, probably around 1993, and Saab wants to have the new organization in gear before then.

By that time, the company won't look much like it does now.

Saab last week offered to move only 20 managers to Atlanta, out

New 'baby' Mercedes

Mercedes-Benz is preparing a new 190 to be launched in Europe next summer and arrive in the United States in the 1993 model year. The new design is rounder with a lower front grille, while overall length and wheelbase are slightly longer. The lineup will include a sedan and wagon, and possibly a coupe and four-seat convertible. Power will come from four- and six-cylinder engines, ranging from a small diesel to a 2.8-liter inline six that makes more than 200 hp.

with a new stock offering.

Rover watchers fear that a consortium of investors could end up with 30 percent of the company and force British Aerospace to sell Rover Group to reduce its debt.

Mitsubishi, Daimler to hold more talks

TOKYO — The Mitsubishi group and Daimler Benz AG will hold their third joint meeting this week in Germany, and although no auto issues are on the agenda. Mitsubishi Motors President Hirokazu Nakamura will attend.

The most concrete result in the auto sector from earlier meetings in Singapore and Tokyo was an agreement to sell Mercedes-Benz vehicles through Mitsubishi dealers in Japan. The two industrial groups have discussed joint development of a sport-utility, and Nakamura said those talks were continuing with some enthusiasm. He said there is virtually no possibility of a tie-up on passenger car production, but another possible area of agreement is cooperation in Eastern Europe.

Animal rights group protests GM research

ALBANY, N.Y — The animal rights group People for the Ethical Treatment of Animals picketed GMC Truck's exhibit at the Empire State Truck and Van Show last Friday.

About 15 protesters carried posters saying, "Save an animal. Buy a Chrysler," "Save an animal. Buy a Ford," and "General Motors: the Heartbreak of America."

Diagrams of a pig strapped into seat belts were also displayed. Some show attendees joined the protest.

The picketing was against passenger-safety research conducted or funded by GM using live pigs, dogs and other animals. GM maintains that it conducts animal research only when information from advanced computer modeling techniques and sophisticated crash dummies is insufficient.

Taurus cargo bin probed after child suffocates

WASHINGTON (AP) — The government is investigating Ford Taurus and Mercury Sable wagons after a 5-year-old child suffocated inside a rear storage compartment.

The National Highway Traffic Safety Administration said it has received four reports of children getting stuck inside the cars' storage areas. The child died June 25 in Beaufort, N.C., a spokesman said. In the other cases, family members helped the children escape.

The investigation involves an estimated 530,000 Taurus and Sable wagons built since the 1986 model year. A Ford spokesman said the company is cooperating with the investigation and exploring improvements for the storage area's latch system.

NHTSA also said that it has upgraded its investigation of reports of power steering failure in the 1988-90 Subaru XT6.

Allison debuts world transmission

INDIANAPOLIS — General Motors' Allison Transmission Division launched production of the new electronically controlled six-speed automatic "world transmission" family it has been developing since 1984.

The new transmissions, for medium and heavy commercial truck and bus markets, have closed-loop and adaptive controls to continuously read and adjust to operating conditions.

The $600 million program was launched with a new MD mid-range diesel engine transmission, and will include new versions for different commercial markets every six months over the next several years.

Honda hopes for a lot from modest ad increase

TORRANCE, Calif. — American Honda Motor Co. faces the task of introducing three new models, protecting the Accord as the best-selling car in the United States and mounting a corporate campaign to maintain the selling power of its brand name.

All these strategies will be executed with an ad budget that's only up modestly from 1991 model-year spending, reports *Advertising Age*, a sister publication to *Automotive News*.

Honda's ad spending totaled $115 million in calendar 1990, according to LNA/Arbitron Multi-Media Service.

To make the most of that budget, the company will air many of its spots in 15-second versions, a first for Honda. The commercials will be paired, since most of the media buys involve 30-second units.

Mazda gets 50% off in Time Warner package

IRVINE, Calif. — Mazda Motor of America Inc.'s new three-year, $96 million cross-media package with Time Warner yielded a media efficiency of 2-to-1, reports *Advertising Age*, a sister publication to *Automotive News*.

That means Mazda negotiated 50 percent off the full price of the media.

Mazda got value-added deals as well. For example, 20 magazines carrying Mazda ads this fall will also host luncheons for select subscribers. The elaborate affairs will include a featured speaker and end with a test drive of the 929 or the MX-3.

Mazda's heavy-duty negotiations were necessary because its ad budget will remain level despite plans to introduce five new models in seven months.

Ford to lay off 340 is Australia

DEARBORN, Mich. — Ford of Australia will lay off 340 of its 1,600 salaried workers between now and the end of the year.

Ford spokeswoman Judith Muhlerg says the cutbacks will be a combination of early and special retirements and layoffs.

briefly

Dealer bullish for promotion

The escape of a 450-pound bull used as an auto sales promotion turned a city street into a rodeo, reports The Associated Press. Hank, a seven-month-old bull, was traded to Cloverleaf **Lincoln-Mercury-Jeep-Eagle-Isuzu** in Decatur, Ala., by a man who was buying a new Lincoln Town Car. Sales Manager Tim Bates said the customer was "$450 shy and he threw this bull in." The dealership decided to use Hank as a sales promotion, but the bull had other ideas. He escaped from his pen and ran by a jewelry store and an office complex, pursued by would-be cowboys from the dealership. Police and a veterinarian were called and the vet finally lassoed Hank. Hank is now in his dealership corral and will be raffled away Oct. 19.

CHRYSLER'S GREAT RACE — This is one time it's safe to say the folks at **Chrysler Corp.** are full of hot air. The company said it will sponsor the Great Chrysler Transatlantic Balloon Race next summer. Ten helium and hot-air balloons will race across the Atlantic from America to Europe. The event celebrates the crossing of the Atlantic by Christopher Columbus 500 years ago and promotes Chrysler's return to the European market in 1988. The winner will receive £10,000 and a Chrysler Voyager. Chrysler will sponsor the Chrysler Voyager balloon.

NO CROOKS HERE — General Motors spokespersons were quick to react indignantly when *The Wall Street Journal* reported last week that Chairman Robert Stempel and other top executives sold millions of dollars worth of GM common stock shortly before an Aug. 8 meeting with securities analysts. A day after the briefing, when analysts were told that a turnaround in GM's North American operations would not happen soon, GM's stock fell 3.5 percent. The story said Stempel sold nearly a quarter of his GM common stock, plus some GM-EDS common stock — pulling in $1.01 million — just a day before the briefing. Several other top officials also sold shares just days before the meeting. But GM spokesmen said the stock sales occurred in one of the few short periods during which such transactions are allowed.

Stempel: an innocent man

GOING SOUTH — Mercedes-Benz has no plans to export Mexican-built cars to the United States, says Erich Krampe, president of **Mercedes-Benz of North America.** The German automaker will begin small-volume kit production in Mexico in the 1993 model year for that country's domestic market. And if the venture expands for export production, "we see it going south, not north," Krampe says.

PIGGING OUT — Forget S-curves, wet roads and gorgeous models. The way to sell cars is with big, pink farm animals — well, sort of. Just ask Rubin Postaer and Associates Los Angeles, the agency that helped make the **Honda** Accord the best-selling car in the United States. In its ad for the new 1992 Civic, the car maneuvers around the legs of a six-ton, 45-foot-tall, 70-foot-long pink piggy bank. The announcer says, "Introducing the new Civic: It doesn't break the bank."

Mercedes: We're not fleeing Japanese

JIM HENRY
Staff Reporter

Mercedes-Benz of North America Inc. strongly disputes the notion that it is "fleeing upmarket" from Japanese competition, even as it introduces a new S class that raised the price of the cheapest S-class car by $15,500.

"We are not fleeing the market at all. We are strengthening our bases," said Erich Krampe, president and chief executive officer, at a 1992 preview in Detroit.

But the new S class, which tops out at $127,800 for the 600SEL sedan, undeniably moves Mercedes into loftier territory. After all, the $15,500 increase from the 1991 300SE to the $69,400 model for 1992 represents a 28.8 percent increase, almost enough to cover the $16,323 transaction price of the average new car nationwide.

The $69,400 models are the 300SD and 300SE sedans. Each replaces two models priced at $53,900 and $57,800.

Due chiefly to the S class, the sales-weighted average price of Mercedes' entire 1992 lineup has jumped $7,000 over last year.

PRODUCT STORIES
A peek at the new 190 ➤ 2
'92 lineup details ➤ 16

Krampe argued that Mercedes is carving out new territory that will find buyers in an expanding luxury car market.

If Mercedes wanted to "flee" upmarket, he insisted, it wouldn't be a safe strategy for very long because he feels the Japanese will follow into higher luxury segments by the middle of the decade. Lexus and Infiniti now top their lines with sedans in the low-$40,000s range, and Acura's NSX lists for more than $60,000.

"I expect them to have models that shoot for the S-class range by the mid-1990s," Krampe said. He thinks they will test the market first with longer-wheelbase versions of current cars.

Meanwhile, Mercedes has promised to shorten product cycles to eight years and to introduce at least one "significant" new model every year through the mid-1990s.

Besides the SL (1990) and S-class replacements, recent introductions include the four-cylinder 190E 2.3, two diesel models and V-8 power for the 300 class in the 1992 400E and 500E. An S-class coupe, which will make its world debut in January at Detroit's auto show, and a 300-class convertible are due next year.

The next series to be replaced is the entry-level 190, which was introduced in 1984. That should represent further evidence whether Mercedes intends to "flee" from the Japanese. The 190 replacement is due in Europe late next year or early in 1993.

Krampe has acknowledged for a long time that Mercedes is unlikely ever to regain the sales volume it reached in the mid-1980s, with a record 99,314 in 1986, artificially helped by a year-end rush because of tax changes.

Mercedes projected sales of about 65,000 cars for this year, which would be about 17 percent behind 78,375 last year. Through September, sales were 21.7 percent behind last year. The projection for 1992 also is about 65,000 cars, including about 20,000 of the new S-class models.

Mercedes executives said they intend to stay in every segment Mercedes presently occupies and to protect a market share of about 7.5 percent of the market for cars over $25,000 and a dominant share of about 56 percent of the cars over $55,000.

For now, at least, hardly anybody else makes cars over $55,000. AN

National Editor David Versical in Detroit contributed to this report.

Mercedes debuts low-priced 180E

SYDNEY, Australia — Mercedes-Benz AG last week launched a stripped-down version of its smallest car, the entry-level 190E, in the Australian market and said it is considering it for other countries as well.

The new model, called the 180E, will be priced at $35,500 (U.S.) in Australia, $15,000 less than a standard 1.8-liter 190E. It will be identical in all respects to the 190E but will not have anti-lock brakes, metallic paint or the 190's front arm rest and rear head rests.

A Mercedes spokesman in Stuttgart, Germany, said the company sells lower-priced versions of the 190E in other markets, but not as a designated 180. The company is considering exporting the new designation to countries other than the United States, where the entry model is not needed, the spokesman said.

Energy bill pairs traditional adversaries

CAFE to be top topic when debate begins

MAX GATES
Staff Reporter

WASHINGTON — Dan Becker sees an "unholy alliance" developing between his Sierra Club and the nation's automakers. Their mutual goal: To defeat the comprehensive energy bill scheduled for debate in the Senate later this month.

Their reasons for opposing the bill are vastly different.

The Sierra Club opposes provisions that would open the last pristine wilderness of Alaska to oil exploration. The automakers are fighting tightened corporate average fuel economy requirements that are almost certain to be included if the bill is to pass.

"Neither one of us is strong enough to kill it by ourselves. But together, we might be able to do it," Becker said.

The Senate is scheduled to take up the energy bill shortly after its return from a recess Oct. 15, and CAFE will be first on the docket, the bill's co-sponsor, Sen. Bennett Johnston, D-La., said last week.

While sources in the office of Senate Majority Leader George Mitchell say the date is not firm, the debate is expected before the end of the month. And the Office of Technology Assessment is rushing to complete a study on fuel economy technology for use in the debate.

Johnston's bill, reported out by the Senate Energy Committee last May, would give the Department of Transportation power to set new CAFE standards at levels it deems technologically feasible.

But Johnston said last week that he intends to introduce an amendment to his own bill, setting CAFE standards at 30.2 mpg by 1996, rising to 37 mpg a decade later. Johnston's amendment would let the secretary of transportation adjust those standards by 1 mpg.

"I don't think we'll get the support we need without some (CAFE) numbers in the bill," Johnston said.

Also on the table will be a CAFE bill sponsored by Sen. Richard Bryan, D-Nev., which was approved by the Senate Commerce Committee last spring. Bryan's bill puts far more demands on automakers to improve fuel economy, requiring each manufacturer to increase its 1988 CAFE by 20 percent by the 1996 model year and 40 percent in the 2001 model year.

While some observers say support for the Bryan proposal is waning, senators with environmental concerns are expected to push for the tougher CAFE numbers.

> "We want a number that represents as far as we can push the auto companies, without hurting jobs, market share or the economy of the United States"
>
> **MALCOLM WALLOP**
> U.S. SENATOR

■ HOW FAR TO PUSH AUTOMAKERS?

The Sierra Club's Becker, while envisioning an "unholy alliance" with the automakers down the road, will start off on the opposite side of the fence — pushing for the stricter CAFE requirements. "Increasing fuel economy is the biggest single step to curbing global warming and saving oil," he said.

While few would argue with those goals, the question the Senate must resolve is how much can fuel economy be increased in the next decade.

"We want a number that represents as far as we can push the auto companies, without hurting jobs, market share or the economy of the United States," said Sen. Malcolm Wallop, R-Wyo., co-author of the energy bill.

Determining how far the auto companies can be pushed won't be easy.

Automakers say they don't have the technology right now to meet dramatically higher fuel economy requirements. And they say tough times in the industry have left them without the engineering manpower to produce technology breakthroughs. Without breakthroughs, increased fuel efficiency can be gained only by downsizing cars, sacrificing safety and consumer appeal, the automakers argue.

In addition, the automakers are already confronted with dozens of new engineering requirements from last year's Clean Air Act amendments and from safety requirements coming on line in the next few years.

"Our problem is trying to balance all those goals in a car that will hit the market five years from now," David Kulp, Ford Motor Co.'s fuel economy chief, told a House subcommittee last week. Kulp was testifying on behalf of the Motor Vehicle Manufacturers Association on fuel economy technology.

Fuel efficiency is barely among consumer's top 10 concerns in buying a new car, Kulp said, "and if the cars don't sell, they won't play any role in fuel economy."

■ SAFETY ADDS WEIGHT

New emissions and safety equipment already required by law will add weight to future cars, making it more difficult to achieve greater fuel economy, said Philip Haseltine, executive director of the American Coalition for Traffic Safety, an industry group.

"What we're asking is that, as you calculate CAFE numbers, back off enough to let the auto manufacturers add the safety equipment," Haseltine said in testimony before House members last week.

But consultants for environmental, consumer and highway safety groups contend the technology already exists for improving fuel economy without any sacrifice in safety. Hybrid vehicles, lean-burn engines, weight cutting materials and transmission adjustments can produce improvements without breakthroughs, they say.

"Our calculations show that 57 mpg will be possible in a car comparable in size and performance to the Honda Accord or Chevrolet Corsica," said K.G. Duleep, a consultant on government and private studies of fuel economy.

> "As you calculate CAFE numbers, back off enough to let automakers add safety equipment."

> COALITION FOR TRAFFIC SAFETY

The Senate's CAFE debate is scheduled just two weeks after the EPA released its fuel economy ratings for the 1992 models. Among them is the 1992 Honda Civic VX hatchback, whose 55 mpg highway rating will likely be addressed in the debate. That economy level was achieved with existing technology, according to Eiji Amito, senior vice president of American Honda Motor Co. Inc.

But the Civic VX does not meet standards for nitrogen oxide emissions coming on line in California in 1994, and the current California model has been altered to meet emissions laws at the cost of fuel efficiency.

And, said Amito, "This is not a fast car. We are not so sure how customers will respond to this new vehicle." AN

PASSENGER CAR CAFE

model year	CAFE standard mpg	Overall average mpg	Domestic average mpg	Import average mpg
1987	26.0	28.5	27.0	31.2
1988	26.0	28.8	27.4	31.5
1989	26.5	28.4	27.2	30.8
1990	27.5	28.0	26.9	29.8
1991*	27.5	28.3	27.4	29.8

No gains seen for '92 mileage

JACK KEEBLER
Staff Reporter

The EPA's fuel economy report for 1992 models gives no sign that a declining trend in fuel economy will be reversed in the coming year.

The report, which appears on Pages 26-27, lists fuel-economy ratings for 1992 cars and trucks. And although corporate averages will not be calculated for months, a preliminary numbers crunching by the EPA indicates that fuel economy will continue to fall.

"Things are not getting any better," said an official at the EPA Emissions and Certification Laboratory in Ann Arbor, Mich. "In fact, they appear to be very slightly worse than last year."

The National Highway Traffic Safety Administration's corporate average fuel economy numbers show that despite a small improvement in 1991, the nation's passenger car fuel economy average of 28.3 mpg last year was lower than in 1987.

According to NHTSA's 1991 model year figures, which are estimates, cars in the Big 3's domestic fleet matched their 1988 peak of 27.4 mpg. Cars classified as imports, meanwhile, stayed at 29.8 mpg for the second straight year.

NHTSA does not break down the import fleet by origin. But an EPA analysis of fuel economy trends released last May said that European cars' mpg peaked at 28.8 in 1981 and have stabilized near 25 for the past four years. The Asians, despite maintaining relatively high overall economy, have had a precipitous fall as they've introduced larger cars and more performance and luxury models. According to the report, Asian mpg ratings peaked five years ago at 32.9 mpg and dropped below 31 mpg for 1990-91.

The EPA fuel economy numbers are slightly lower than those used by NHTSA, which administers the nation's fuel-economy laws. NHTSA's numbers are adjusted to compensate for a change in test procedures.

EPA fuel-economy numbers for the 1992 cars listed range from 9 mpg in the city for the 200-mph Lamborghini Diablo to 53 mpg city for the Geo Metro XFi. AN

Dealers slash TV spending by 22%

ARLENA SAWYERS
Staff Reporter

Auto dealers trimmed their TV advertising 22 percent during the first half of 1991. Recession and the Persian Gulf war cut sales 15 percent during the period, and poor sales reduced co-op budgets.

Spending by the 15 largest dealers declined, but not as fast as for all dealers, said the Television Bureau of Advertising. The nation's 15 leading automobile dealer TV advertisers bought $111.9 million worth of TV ads from January through June 1991, down 17 percent from $134.9 million in the same period in 1990, it said.

"Local dealer advertising, down 22 percent, reflects the drop-off in retail sales since the money spent in advertising comes from co-op dollars directly tied to car sales," said Jim Joyella, bureau president.

Overall automotive advertising revenue in national and regional TV for the first six months of this year was $1.37 billion, down 9 percent from $1.50 billion in 1990.

Automotive spot ad spending was down 8 percent, from $640 million in the first half of 1990 to $590 million. Network ad revenue fell 9 percent, from $865 million to $786 million.

Although dealers collectively spent less on TV ads in the first six months of this year, eight of the 15 top spending dealers increased their outlays.

The $1.29 million spent by Atlanta Toyota in the first six months of 1991 made it the top TV spender among dealers, but it represented a 16 percent decline from the same period last year. In second place was Cerritos Auto Square Dealers in suburban Los Angeles, which spent $986,100. That was 45 percent more than it spent in 1990.

Cal Worthington-Sacramento (Chevrolet-Geo-Mitsubishi) was third with $850,100, which was 27 percent less than it spent a year earlier, according to the bureau.

But Kati White, media director for the Worthington dealerships, disputed that figure.

She said owner Cal Worthington has been very careful to remain consistent in his ad spending at least for the last four years, adjusted annually in accordance with the cost-of-living index.

"I beg to differ," said White. "Our TV budget did not drop 27 percent. Cal prefers to remain consistent, such as J.C. Penney or Pepsi Cola. It pays off on an annual basis."

White said the zero percent change in TV spending listed for sixth-place Cal Worthington Ford in Los Angeles "is about right."

White would not comment on the 8 percent decrease the bureau reported for seventh-place Worthington Chevrolet in Houston, saying that Worthington has not owned that store long enough to establish a trend.

The bureau reported that Worthington's Los Angeles and Houston dealerships spent $697,000 and $690,800, respectively, on TV ads in the first six months of 1991.

In an effort to keep up with one another, three dealers in San Antonio upped their spending well over 200 percent.

One of the three is Performance Nissan, which spent $442,500 in the first six months of the year, 266 percent more than it spent the same period last year.

Don Judd, dealer principal at Performance Nissan, said his dealership makes commercials up to four times a month and airs TV spots virtually every day. Advertising dominance, he said, is the key to success.

"We chose TV because we want to reach 85 percent of the market 3½ to 5 times a week," said Judd. "We can't command a presence in newspaper, there are three other dealers here. But on TV, we can be dominant. We're going to get more than our share of the market."

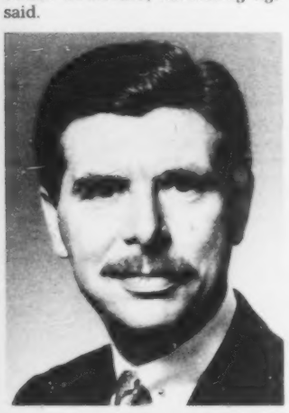
Ford, Chrysler to boost ad spending in '92

Reclaiming share from Japanese is goal of strategy

RAYMOND SERAFIN
Crain News Service

Ford Motor Co. and Chrysler Corp. plan to increase ad spending in 1992 in an attempt to reclaim market share lost to Japanese rivals, according to *Advertising Age*, a sister publication to *Automotive News*. The Japanese have spent heavily in 1991 despite the economic downturn, *Advertising Age* said.



"I think we probably are underspending right now. I haven't made any decisions as to what we might do about that, but it's something that could change very rapidly."

ALEX TROTMAN
FORD MOTOR CO.

Ford's automotive division advertising budgets could climb as much as 20 percent, although those figures haven't been firmed up, sources said. Ford is spending an estimated $340 million in 1991, and Lincoln-Mercury an estimated $115 million.

Alex Trotman, Ford's executive vice president of North American Automotive Operations, signaled the potential boosts in a recent interview when he acknowledged that Japanese automakers have increased the marketing pressure.

"I think we probably are underspending right now," Trotman said. "I haven't made any decisions as to what we might do about that, but it's something that could change very rapidly. We might decide we'd better turn up the heat somewhat. . . . We watch the competitive data all the time, and we may well make a change over the next few months."

Chrysler already has added an estimated $40 million to $50 million to fourth quarter ad spending. Sources peg Chrysler ad budget increases for calendar 1992 at 20 percent over this year's $550 million for all corporate advertising.

The increase is largely to back the introduction of the 1993 Jeep Grand Cherokee during the Winter Olympics broadcasts on CBS and to back next fall's launch of key mid-sized cars for the 1993 model year. The cars are the Chrysler Concorde, Dodge Intrepid and Eagle Vision.

"Chrysler has really made up its mind that it has to support its new products across the board," said an agency source.

Marketing executives at General Motors are still debating 1992 budgets. A corporate decision on marketing plans is not expected until later this year.

"Given the kind of year we've had and the pressure on the industry, everybody's got to make a strong business case to generate more dollars," said Chevrolet's Jeff Hurlbert.

Through August, the Big 3 had 70.2 percent of the combined car and light-truck market in the United States, down 1.6 percentage points from the same period last year. Japanese brands increased their share by 2.0 points to 25.9 percent. Each point of market share represents about $2 billion in annual sales.

U.S. auto marketers, especially GM and Chrysler, reined in their ad spending during the first half of recession-plagued 1991, opening the door for their Japanese rivals to steal market share.

Toyota Motor Sales U.S.A. Inc. and American Honda Motor Co. Inc. led the marketing push that capitalized on the opportunity.

Toyota, Honda and American Isuzu Motors Inc. were the only auto companies to boost TV ad spending in the first half of 1991, said Jim Joyella, president of the Television Bureau of Advertising. The bureau recently released its report on network and spot TV ad spending.

Although reports from other media aren't available yet, TV spending typically accounts for about half of a major auto marketer's total ad spending.

The correlation between ad spending and market share highlights an important difference in competitive approaches between U.S. and Japanese companies.

Domestic marketers, responding to pressures for quarterly earnings, have historically tended to trim spending in marketing and even product development in an effort to stay in the black. Japanese companies have traditionally taken a longer view of the competitive battle.

"We look further out," said Ren Rooney, Toyota's corporate marketing manager. "We had a strategy that we set out early, and we like to keep a course when we decide on it."

The Japanese-based auto marketers "see their share in a growing position. They have a lot of new products, and they have the means to support it from a marketing standpoint," said Philip Guarascio, GM's executive-in-charge of corporate marketing and advertising. "They believe in advertising, and they certainly have a willingness to invest and spend against their products."

Industrywide TV ad spending fell 9 percent to $1.375 billion in the first half of 1991, the Television Bureau of Advertising said.

In an August interview, Chrysler President Robert Lutz said that Japanese marketers were "buying share."

"In a downturn, you cannot permit all your share to erode, because you'll start losing dealers and you'll never get it back. On the other hand, you can't buy share at all costs."

ROBERT LUTZ
CHRYSLER PRESIDENT

"The incentive levels, dealer cash levels and per-unit advertising, I think, are all at record highs for Japanese brands," Lutz said.

But he said it is possible to win back share, pointing out that Ford dropped to 16 percent of the market during the recession of the early 1980s but rebounded to more than 20 percent.

"In a downturn, you cannot permit all your share to erode, because you'll start losing dealers and you'll never get it back," Lutz said. "On the other hand, you can't buy share at all costs. You've got to find the right balance."

Advertising Age Reporter Cleveland Horton in Los Angeles contributed to this report.

Infiniti spending tied to growth

Plans by Nissan's Infiniti Division to boost 1992 model year spending as much as 20 percent from an estimated $50 million in 1991 illustrate how Japanese auto marketers map out their plans with long-term goals in mind.

"Our marketing spending is not tied into the economic recovery," said William Bruce, Infiniti general manager. "It's tied into our plan on volume and number of dealers and the number of markets we're going to be in."

Bruce said Infiniti will increase its ad spending by an undisclosed amount in the 1992 model year, based on plans to:

- **Add 20 to 25 new dealers to its roster of 106.**
- **Introduce a new model next spring.**
- **Boost sales some 21 percent to about 45,000 cars.**

Big 3 gain share as sales fall

KAREN DETKOWSKI
Statistician

September vehicle sales declined 6.8 percent from a year earlier, but it was an improvement from August, especially for the Big 3, and especially for trucks.

The Big 3 increased their market share over August by 5.3 points as Chevrolet and Ford divisions fought for sales supremacy.

General Motors added 2.1 points of share, Ford Motor Co. was up 2.2 points and Chrysler Corp. gained 1.0 point. The gains came at the expense of the Japanese (4.3 points) and Europeans (0.6 points).

The seasonally adjusted annual sales rate improved to 12.4 million vehicles from the August rate of 12.2 million. Except for the sharp fall in August, the annual selling rate has improved from month to month all year.

Light-duty truck sales in September rose above year-ago deliveries 5.3 percent. Ford truck sales, pumped by a one-day, $2,000 dealer incentive on the last day of the model year, rose 18.6 percent (see story, Page 1).

Chrysler, whose minivans are in strong demand, saw light-truck sales rise 4.4 percent from year-ago September levels.

Car sales dropped 12.8 percent from last year, but 14 makes reported increases in September. Among them, Lexus reported a sales gain of 17.1 percent over last year. The introduction of the 1992 ES300 helped sales more than double the total for August.

Sterling and Peugeot, which are leaving the U.S. market, had better sales this year than last year. Peugeot sales in September reflected the highest selling month for the company since January of this year. Both are using dealer incentives to clear out their stock.

Hyundai sales rose 16.6 percent, reporting increases for existing models and the new Elantra.

Calendar year car sales in the United States are behind last year's total by 12.8 percent. Total light vehicle sales at the end of nine months fall behind 1990 comparisons by 12.5 percent.

Harley-Davidson wins Ford contract

MILWAUKEE — Utilimaster Corp., the subsidiary of Harley-Davidson Inc. that makes commercial vehicles, has won a $10.8 million contract with Ford Motor Co. to build 2,163 truck bodies for the U.S. Postal Service.

Thomas A. DeNova, president of Utilimaster, said the company based in Wakarusa, Ind., had a long relationship with Ford and would begin production of the truck bodies in December.

PARTS

Ford dealers oppose changes

continued from PAGE 1

an increasingly difficult job.

But more so for Ford than for its competitors.

A confidential 1991 survey by the National Automobile Dealers Association ranks Ford near the bottom in satisfactory parts deliveries.

"We spend more money on dealer parts marketing and distribution costs and incentives than any other manufacturer, and we're getting less satisfaction from dealers and retail customers," Clissold confirmed.

At a special Parts Managers Advisory Council meeting in Detroit last month, Ford blamed the programs it is now seeking to alter.

Sales charts compiled by Karen Ostkowski

"Parts and service managers are caught in a balancing act of trying to decide whether they should satisfy the end-customer's wants regarding parts availability or maximize the bottom line for their departments," said a Ford statement that was distributed at the meeting.

Dealers are wary of changes in the status quo because service parts sales now account for 85 percent of their profit, according to NADA.

They've developed their operations around the five programs Ford is seeking to change.

Ford definitely plans to eliminate its Merit Club and Bonus Bucks programs, beginning in the first quarter of 1992, Clissold confirmed. Those programs reward dealers for buying Ford parts directly from the factory rather than from wholesale distributors or other dealers.

Some dealerships, like Al Packer Ford Inc. in Baltimore, have developed huge parts supply operations for other dealers and independent service outlets.

Al Packer Ford functions like a mini depot, supplying 20 Ford and Lincoln-Mercury dealerships in the Baltimore area, according to Arthur Dickerson, Packer's general parts manager.

Clissold said giving dealers incentives to buy parts only from Ford is counterproductive.

The company plans to offer incentives for smaller Ford dealers to buy parts from larger ones, he said. Details haven't been finalized.

Still, Bonus Bucks and Merit Club have been very profitable for many dealers.

Bob Baker, a megadealer who owns University Ford-Chrysler-Plymouth in San Diego, said the two programs earned his Ford dealership $38,500 last year.

A national survey of 20 large and small dealerships by the Ford Dealers Alliance in Hackensack, N.J., indicated they will lose an average of $39,000 when the two programs are canceled.

Ford also will test-market changes in several other programs from November through May in Dallas, Houston, St. Louis and possibly a fourth market, Clissold said. They include:

- Reducing the discounts dealers get on stock orders from 5 percent to 4 percent. Dealers order about 90 percent of their parts that way, with automatic twice-a-week delivery.
- Reducing the buyback allowance under the Parts Inventory Protection Program from 7 percent to 5 percent. That program encourages dealers to order extra parts. When Ford changes models, a dealer can return 7 percent of such parts. Ford buys them back for what the dealer paid.
- Dropping the 80 percent excess parts return allowance. The Parts Inventory Protection Program only covers up to $100,000 worth of parts.

The excess parts return provision refunds a dealer 80 cents on the dollar for up to another $100,000 in parts returns.

- Eliminating cash payouts on the unused Parts Inventory Protection Program. That program rewards those who run tight parts operations for not collecting under the Parts Inventory Protection Program.

The Ford Dealers Alliance survey showed dealers losing an average about $132,479 because of the program changes.

One of the ways Ford will redirect money under its test-market program is to guarantee free next-day delivery to customers on any part a dealer may be out of.

SALES

1991 model year totals 12.6 million

continued from PAGE 1

Chevrolet/Geo led in car sales.

While unit sales fell overall, Japanese manufacturers added 1.3 points of car and truck market share to rack up 25.5 percent of the U.S. market. The Big 3 — including trucks — dropped 0.9 of a percentage point to 70.5 percent. European imports, which had no market share to spare, dropped 0.4 of a point to 3.0 percent.

Not surprisingly, the 1991 model year numbers look a little better than the 1991 calendar year, which began in the pits because of the Persian Gulf war. Through September, calendar-year sales were off 12.5 percent.

The traditional October-to-September model year is getting pretty fuzzy. Manufacturers aren't sticking to it for new-product introductions, but it is still a reference point for measuring performance.

Sales for GM's Saturn, the nation's newest car division, began last Oct. 25. Hampered by a slow production start, Saturn sold 50,819 cars for the 1991 model year.

Industry sales leader GM sold about 4.4 million cars and trucks. That total included just under 3 million cars, enough to lift GM's car market share 0.3 points, to 35.4 percent. GM's light-truck sales were about 1.4 million. Total unit sales were down 10.3 percent.

Buick was the only domestic make and one of only six makes in the industry that enjoyed higher sales for the model year, with sales up 5.0 percent to 544,277.

The other gainers were Subaru, Lexus, Infiniti, Saab and Alfa Romeo, all at much lower volumes.

Buick had fallen 9.6 percent in the previous model year.

Robert E. Coletta, Buick general sales and service manager, attributed the 1991 success to high J.D. Power and Associates quality ratings, new styling, favorable buff-book reviews and dealer support for new-model introductions.

Oldsmobile sales declined 9.2 percent despite a 34.1 percent increase in its light-truck sales. Olds added the Bravada sport-utility for 1991. Still, the performance marked a turnaround for Olds; car sales had slumped 23.0 percent in the previous model year.

Ford Motor Co. sales were off 12.7 percent to 2.91 million vehicles. Lincoln suffered a reversal of fortune after a 9.7 percent gain in the 1990 model year. Lincoln sales dipped 13.1 percent.

Most of whatever good news there was in the 1991 numbers belongs to the Japanese.

Unit sales for Japanese-based manufacturers declined 5.2 percent to about 3.2 million units. But since that was less than the industry average, the result was a market-share increase for cars and light trucks.

The Japanese share of the car market grew 1.5 points to 29.7 percent; it was within 25,000 cars of a 30 percent share. The Japanese light-truck share rose 0.7 percentage points to 17.1 percent.

Toyota gained 0.6 points of market share to 8.0 percent, as its unit sales slipped only 2.9 percent to about 1.0 million cars and trucks. The Lexus luxury-car division posted a 14.4 percent sales increase to 65,391 cars, outselling BMW of North America Inc. by nearly 10,000 cars.

American Honda also gained market share, with unit sales off 4.0 percent to 815,542, counting Acura. Acura sales of 138,759 were only 1.1 percent behind last year.

Infiniti, the second channel for Nissan Motor Corp. in U.S.A. sold 28,879 cars, a heady increase of 68.7 percent compared to a small year-ago volume, thanks in no small measure to its new-for-1991 G20. Nissan said sales of its Pathfinder sport-utility were the best in that vehicle's five-year history. Sales fell about 8.9 percent for Nissan and Infiniti combined. The company's market share was stable at about 4.6 percent.

Subaru of America's sales rose 2.0 percent to 109,647, as Subaru cut back on rebates and added standard equipment to its aging Loyale lineup. A year earlier, Subaru sales had plunged 28.7 percent.

After enjoying a banner 1990 model year, when car sales jumped 66.4 percent and truck sales gained 18.7 percent, Mitsubishi Motor Sales of America Inc. turned out to be mortal in 1991, with unit sales down 12.9 percent.

It was a dismal year for most European importers. Saab Cars USA was an exception, with sales up 1.8 percent to 26,445, boosted by cut-rate leasing and finance deals.

Alfa Romeo had a 23.7 percent increase to 3,756 cars, helped by the addition of the 164 sedan as an early 1991 model.

With the luxury tax on cars over $30,000 introduced last January, the model year was a disaster for some of the prestige names, like Porsche Cars North America, down 40.0 percent, and Jaguar Cars Inc., off 38.6 percent. AN

BATTLE

One-day spiff wins for Ford

continued from PAGE 1

The final tally: Ford F series, 431,353; Chevrolet C/K, 423,324. Sales include light and medium-duty trucks.

"The meek may inherit the earth, but they're not gonna get truck leadership," said a smiling Phil Novell, Ford Division general sales manager.

Chevrolet dealers, who thought they could steal Ford's title, are fuming. At the end of August, Chevrolet led Ford by 4,486 units.

But at issue is a Sept. 30 last day of the model year incentive Ford offered its dealers on F-series trucks. Dealers were offered a $2,000 discount for each F-series unit that they moved into Ford Rent-A-Car fleets. The discount was in effect for up to three units. Vehicles are declared sold after they are moved into the fleets.

Ford won by 8,029 units; if all 4,500 dealers put three F-series trucks in rental fleets, that's 13,500 more sales for Ford.

Chevrolet dealer Louis C. Bachrodt III was stunned when he heard about the $2,000 discount.

"Jesus! They (Ford) just went out and pissed it (the money) away," he said.

Bachrodt, owner of Lou Bachrodt Chevrolet in Pompano Beach, Fla., and chairman of Chevrolet's National Dealer Council, lambasted the $27 million Ford will swallow if all 4,500 Ford dealers participated.

"It's like buying Jaguar," he said. "It's a shallow victory. Ford didn't win it; they bought it."

Ford dealers hardly feel sorry.

"This is a dog-eat-dog, highly competitive world," says Elvin Pool, general manager of McInerney Ford in Orlando, Fla. "Incentives are made for competition."

Ford Division General Manager Ross Roberts announced the victory at the Detroit Press Club, which was decorated as a campaign headquarters. Roberts said the $2,000 rebate on the F series was offered to commercial buyers, and the division decided to extend the bargain to its dealers.

He said the full-sized truck race between Ford and Chevrolet brought a lot of attention to the trucks, in general and helped both companies and the public.

Said Jeffrey P. Hurlburt, Chevrolet marketing director, "We have intended to win (the truck battle) with sales of our full-sized pickups. We were not intent on selling the products to ourselves or encouraging dealers to put them into daily rental fleets. . . I didn't realize there was such a great market for daily full-sized pickup rentals."

The race went down to the wire, but it was September when Ford stretched out. The 63,514 F-series trucks that Ford dealers sold last month represented the highest tally for that month since September 1986, when 87,995 F-series units were sold. Chevrolet sold 50,999 C/Ks last month.

Ford analyst Roger Lykins said September 1986 featured the "Big One" promotion when auto companies were promoting interest rates of 2.9 percent.

Ford dealers are happy, but one dealer has this question:

"When am I gonna see my $2,000?" the dealer asks. "I've been waiting months for money they owe me on another promotion." AN

TOYOTA

Ex-dealer asks state to banish distributor

continued from PAGE 3

Toyota Motor Sales denied the allegations. The company's independent distributors are free to set their own transportation rates, said spokesman James Olson.

Olson said that while Southeast Toyota dealers are paying more than Toyota dealers elsewhere, the rates are still lower than many other car lines.

Southeast Toyota opened the Commerce plant in 1989, shortly after the Georgetown, Ky., Camry plant opened. Before then, all vehicles entered the region through a Southeast Toyota-owned port facility in Jacksonville, Fla., which still installs accessories.

Jones' complaint last week also repeats several allegations contained in his lawsuit, claiming that they represent violations of various state laws.

Those allegations — all of which have been denied by Southeast Toyota management — say that the distributor coerced Magic Toyota and other dealers to order and accept vehicles they did not want. AN

Yugos recalled

UPPER SADDLE RIVER, N.J. — Yugo America Inc. is recalling 3,678 of its 1990 and 1991 GV Plus models to install sealing washers on the electronic fuel injection control unit mounting studs.

Water can get into the control unit, which may cause stalling.

HONDA

Honda developing minivan for U.S.

continued from PAGE 1

dustry. Okusa and Elliott admitted that the cry for a minivan has become a familiar refrain at dealer meetings. One dealer called the minivan "the No. 1 recommendation" dealers have made to Honda.

Honda had hoped that the Accord station wagon, introduced last year, would satisfy some of the need for a minivan. But it has been selling below expectations. Okusa said that Honda had hoped to sell about 3,000 of the U.S.-built wagons a month. Instead, volume has averaged between 2,000 and 2,500.

Some dealers have suggested that wagon sales would improve if a third seat was added to boost passenger capacity to seven. Okusa and Elliott said space and design constraints prevent a third seat from being added. Elliott said the third-seat issue will be raised as the next generation wagon is designed. The wagon, which is built in Marysville, Ohio, was the first Honda product designed and developed in the United States.

A replacement for the Accord is expected in the 1994 model year. Asked if Honda could base a minivan on that platform, the spokesman in Japan said: "We are studying every possibility."

He emphatically denied that a minivan would be part of a joint-development agreement announced between Honda and Rover Group Ltd. last week.

At an introduction of 1992 models, Elliott said he expects the company to sell 860,000 Honda and Acura units in the 1991 calendar year. That would be slightly ahead of last year's 854,879, and would require a boost in the sales pace through September, when volume was down 6.0 percent.

Honda expects to sell 420,000 Accord models this year, up from 417,179 in 1990.

Honda planners expect to sell 225,000 redesigned 1992 Civics — 150,000 sedans and 75,000 hatchbacks. A two-door Civic notchback is expected in the spring. Honda is not offering a 1992 CRX but it will introduce a 1993 CRX replacement next spring.

The Prelude, also new this fall, is expected to sell around 50,000 units, according to Okusa.

Staff Reporter Richard Johnson in Tokyo contributed to this report.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

CHRYSLER CORP.
All programs expire Dec. 31. Finance rates in lieu of rebates start at 6.9 percent on minivans, 4.9 percent on other models.

1992 models

incentive WATCH

Chrysler Corp., Subaru of America Inc., Mazda Motor of America Inc. and Hyundai Motor America announced new or adjusted incentive programs last week.

Until Dec. 31, **Chrysler Corp.** is offering consumer rebates on 1990, 1991 and 1992 vehicles.

Rebates on 1990 and 1991 vehicles are: Chrysler, $1,000 to $2,000; Dodge cars, $700 to $2,000; Dodge trucks, $750 to $1,500; Eagle, $700 to $1,500; Jeep, $500 to $1,500, and Plymouth, $700 to $1,500.

The rebates on 1990 and 1991 Chrysler, Plymouth and Dodge minivans are $500 to $1000.

Rebates on 1992 vehicles are: Chrysler, $500 to $1,000; Dodge cars, $300 to $1,500; Dodge trucks, $300 to $1,000; Eagle, $300 to $1,500; Jeep, $500 to $1,000, and Plymouth, $300 to $500.

In lieu of rebates, consumers may choose financing of 4.9 percent to 9.9 percent on cars and trucks and 6.9 percent to 9.9 percent on minivans, depending on contract length.

Chrysler halted its special incentive program for military personnel, but it is continuing its $500 rebate for recent college graduates, $400 for first-time buyers and $500 for vehicles equipped with adaptive controls for the disabled. Those rebates are in addition to national consumer rebates.

Through Jan. 3, **Hyundai** is offering consumer rebates of $500 to $1,000 on 1991 cars. Also, consumers who trade a 1986-91 Hyundai for any 1992 Hyundai are eligible for a $1,000 rebate.

Subaru extended its consumer rebate program on the 1991 Loyale, Legacy, XT and XT6. Subaru also is paying dealers up to $1,600 on 1991 Legacys depending on the number sold. Subaru's programs expire Nov 4.

Mazda adjusted its program by increasing the consumer rebate on 1991 and 1992 MX-6 models from $500 to $800 and added the 1991 RX-7 to the list at $2,000.

Also added was a consumer rebate of $1,000 on 1992 trucks.

The rebate on MX-6 and RX-7 models expires Nov. 4; rebates on trucks run until Dec. 3.

Special Correspondent Chris Eschenburg contributed to this report.

INCENTIVE WATCH — DEALER INCENTIVES

NEW PROGRAM

SUBARU (1991 models; expires Nov. 4)

Legacy	$100-1,600, based on number sold

CONTINUING PROGRAMS

ALFA ROMEO (expires Dec. 31)

164, 164L automatic (1991)	Up to $200 per car monthly in floorplan aid

GENERAL MOTORS

Cadillac Allante (1991) (no expiration date)	$7,500 on first sale, $8,500 on additional sales

ISUZU (1991-92 models, unless otherwise noted; expires Dec. 31)

Cars*	$800-1,800
All pickups*	$1,000-1,500
4x4 pickups (bonus, 1990-91)	$500
Trooper*	$1,500-1,800
Rodeo*	$00-500

*Based on number sold

LOTUS (1991, no expiration date)

Elan	$5,000
Esprit Turbo	$11,000-15,000

MAZDA (1991 models; expires Nov. 4)

929	$2,000
323 (low-volume dealers)	Up to $500

MERCEDES-BENZ
(1991 models, no expiration date listed)

300SE, 300SD, 300SDL, 300SEL 420SEL, 560SEL	$3,000 $5,000

MITSUBISHI
(1990-91 models; rebates and terms vary by regions; programs expire Oct. 31)

Mirage	$250-1,500
Eclipse	$300-1,200
Galant	$300-2,100
Montero	$400-3,000
Pickups	$400-2,300

NISSAN
(1991 models; expires Feb. 2, 1992)

300ZX	$2,500-3,500, quota

PEUGEOT (no expiration date)

405	$5,000
505	$6,000

STERLING (no expiration date)

All models	$8,000*

*Or $3,000 if customer chooses 0 percent financing

TOYOTA (expires Nov. 4)

Corolla (1990-92)	$200-900, quota
Camry (1990-91)	$200-900, quota
Pickups	$200-1,300, quota

VOLKSWAGEN

All cars (1990, no expiration date)	$500-1,500

VOLVO (1991 models; expires Oct. 31)

740 series	$750-1,500
940 series	$1,500-2,500
780 coupe	$2,500

CONGRESS

Castaing, Roberts among speakers

continued from PAGE 3

He rejoined Ford Division last May.

Roberts was born Gainesville, Texas. He was graduated from the University of Oklahoma in 1960.

Castaing has been vice president of vehicle engineering for Chrysler since 1988. He also has been general manager of Jeep/Truck Operations since Jan. 11, 1991.

He directs all of Chrysler's car, Jeep and truck engineering.

Castaing joined Chrysler in 1987 as vice president of Jeep and truck engineering.

He was born in Marseille, France, and was graduated from *Ecole Nationale Superieure d'Arts et Metiers* in 1968. In 1970, he joined Renault Gordini. In 1975, he became chief engineer at Renault Gordini and Renault Sport.

In 1980, he joined Renault USA as product engineer director.

Castaing was with American Motors from 1982 to 1987. He spent a year as AMC's group vice president of product and quality before Chrysler bought AMC in 1987.

The format for the 1992 World Congress has been changed slightly from that of the previous two years.

Past congress schedules included two speakers Tuesday morning, with the rest of the morning devoted to a private viewing of the Detroit auto show for the Congress audience. This year, four people will speak on Tuesday morning, and all of Wednesday morning will be dedicated to viewing the show.

For further information, write Wendy Barhydt, Automotive News World Congress, UMTRI/OSAT, 2901 Baxter Road, Ann Arbor, MI 48108-2150. The telephone number is 313-764-5592.

Volvo Cars to shut Chicago parts hub

ROCKLEIGH, N.J. — Volvo Cars of North America is phasing out one of its four parts distribution centers.

"The pressure is on in the automotive industry to increase efficiency and reduce costs," the company said, announcing the closing of its Chicago distribution center by the end of 1991.

Seventy-five of the 80 dealers who were served from Chicago will be served by Volvo's Atlanta distribution center, where a second shift will be added. The other five dealers will be served by Volvo's Los Angeles parts center.

The third remaining parts center is Volvo's national distribution center in Rutherford, N.J.

SCHEDULED PLANT CLOSINGS

Plant	Weeks down	Units lost/ week
CHRYSLER		
Bramalea, Ontario	10/7

Ford heavy truck plant idled 5 weeks

JOSEPH BOHN
Truck Editor

Ford Motor Co.'s heavy-truck business, like that of its competitors, has fallen off sharply enough to warrant considerable downtime over the next three months.

Ford has scheduled five weeks of downtime at its heavy-truck plant in Louisville, Ky. The plant will be down the weeks of Oct. 7, Oct. 21, Nov. 4, Nov. 18 and Dec. 9, according to company sources.

That is in addition to the holiday shutdowns in the last week of November and between Christmas and New Year's Day.

It adds up to a pretty skimpy production plate at Kentucky Truck during the final quarter of 1991.

Joel Pitcoff, Ford research and analysis manager, declined to confirm or deny the planned downtime, saying it is Ford's policy not to comment on future production activities.

Ford's Class 8 sales of 518 trucks in August were down 48.4 percent from a year earlier. Its eight-month calendar year Class 8 sales of 5,546 were off 40.9 percent from a year earlier.

The overall Class 8 industry was off 26.9 percent in August, and 23.8 percent for the first eight months of calendar 1991 from a year earlier, according to the Motor Vehicle Manufacturers Association.

With the heavy-truck market stagnating, Ford's shift of its medium-duty Cargo production from Brazil to Kentucky Truck a year ago looks like an increasingly smart move.

Cargo has been doing fairly well in a weak medium-duty market, with retail sales of 601 for Jan. 1 through Sept. 20, compared with 888 for like-1990.

Some industry observers believe that Ford should shift additional specialized commercial truck products to Kentucky Truck in order to put the plant at a successful operating rate.

U.S. AND CANADA CAR AND TRUCK PRODUCTION

Civic sedan is last '91

ROBIN-LYN RAIMEY
Special Correspondent

As assembly line workers completed a rosewood brown Honda Civic sedan at Honda of America Manufacturing Inc.'s East Liberty, Ohio, plant last Tuesday, 1991 model year production came to an end.

Car and truck production for the 1991 model year totaled 11,149,748.

So far this year, 4,118,731 cars have been assembled in the United States, 14.0 percent below the year-ago total. U.S. truck production at this point is 2,584,809, down 16.1 percent from 1990.

U.S. auto production last week was 122,156, down 3.1 percent from the previous week and 15.2 percent below the year-ago week.

Truck production in the United States was estimated at 87,313 last week, 2.3 percent above the previous week and 10 percent above the year-ago week.

At 21,686, Canadian car production last week was down 15.9 percent from the previous week and 16.5 percent from the year-ago week. Truck production in Canada was 20,445, down 1.7 percent from the previous week, but up 28.7 percent from 1990 week, which was hurt by a strike.

Year-to-date Canadian truck production is 627,882, down 2.1 percent from 1990. So far this year, car production is 831,229, up 3.9 percent over last year.

The week's scheduled car production was shared as follows: GM, 48.9 percent; Ford, 20.2 percent; Chrysler, 11.5 percent; Honda, 7.1 percent; New United Motor Manufacturing Inc., 3.5 percent; Mazda Motor Manufacturing Corp. U.S.A., 3.3 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.3 percent; Diamond-Star Motors Corp., 2.2 percent; Subaru-Isuzu Automotive Inc., 1.0 percent; and Toyota Motor Manufacturing U.S.A. Inc., 0 percent.

GM scheduled two shifts of Saturday overtime at the Shreveport, La., plant, which produces the Chevrolet S10 Blazer and S10 pickup, the GMC Sonoma and the GMC S15 Jimmy. Also working Saturday was the Wentzville, Mo., plant (Buick Park Avenue, Oldsmobile Eighty Eight Royale and Pontiac Bonneville), and the Oshawa No. 2 plant in Ontario, which makes the Buick Regal and the Chevrolet Lumina.

One shift of Saturday overtime was scheduled at GM's Doraville, Ga., car plant and the Scarborough, Ontario, truck plant. The Doraville plant makes the Oldsmobile Cutlass Supreme, and the Scarborough plant makes Chevrolet and GMC full-sized vans.

Chrysler scheduled two shifts of Saturday overtime at the St. Louis No. 2 plant, which produces the Chrysler Town and Country, the Plymouth Grand Voyager, and the Dodge Grand Caravan and Caravan C/V.

GM dealership opens in USSR

MOSCOW — The first General Motors-authorized dealership in Moscow is scheduled to open tomorrow, GM Europe announced.

Avtoimport has signed an agreement with GM's Germany-based Adam Opel AG to sell new Opel cars and parts and provide full customer service, said the company.

The company said the first shipment of new Opel cars and spare parts has arrived at the dealership, and Avtoimport has modified a workshop to meet Opel standards.

Avtoimport is the first of a number of GM Europe dealerships to be opened in the Soviet Union, said M.A. Razaq, regional director for Eastern Europe and export markets. He said an agreement has been signed for a dealership in St. Petersburg (formerly Leningrad), which will open in two months.

GM trusts its new engines

Buyer gets replacement if anything goes wrong

PHIL FRAME
Staff Reporter

Buyers of General Motors cars equipped with any of the company's new engines will get an all-new powerplant if anything goes wrong with internal components.

The engine exchange program began Oct. 1 and will run through the 1992 model year, said Mike Yuskowatz, technical coordinator for the Powertrain Division.

Engines that fail are being replaced rather than repaired because engineers want information on why the breakdowns occurred so any problems can be corrected, Yuskowatz said.

The engineers don't want dealership service technicians to work on internal engine components because it would affect failure data.

Technicians may service brackets, water pumps, vacuum tubes, starters, ignition system, sensors, accessory drives and several other exterior engine components.

But the cylinder case, cylinder head and gaskets, cam cover, oil pump, timing chain and all other internal components aren't to be removed, let alone serviced or replaced.

"We're trying to get more complete information on any problems that occur in the field so we get more timely corrections," Yuskowatz said. "If we see anything we need to fix across the board, we can do that a lot more quickly. It may cost us a little more initially, but we think it could reduce the incidence of comebacks."

The program covers five new GM engines:

- The 6.5-liter V-8 turbo-diesel used in two-wheel-drive versions of the three-quarter- and one-ton C/K pickups and chassis cabs sold by Chevrolet and GMC Truck.
- The supercharged 3800 or the 3.8-liter V-6 in the Oldsmobile Ninety Eight Touring Sedan, Buick Park Avenue Ultra and Pontiac Bonneville SSEi.
- The 3.4-liter "Twin Dual Cam V-6" available in the Chevrolet Lumina Z34 and Euro Sedan, all Pontiac Grand Frixs, and on all Oldsmobile Cutlass Supremes except the convertible.
- The 5.7-liter "LT1" V-8 on the Chevrolet Corvette.
- The 2.3-liter, 16-valve, single-overhead-camshaft "Quad OHC" in the Buick Skylark, Oldsmobile Achieva and Pontiac Grand Am.

The single limitation in the program involves the supercharged 3800 V-6. With that engine, the exchange policy is effective only for defects relating to the supercharger, which debuted on

Toyota unveils new high-performance sedan

Toyota last week introduced the Aristo in Japan, where it hopes to sell 3,500 a month. The new sedan, rumored to be a Cressida replacement, is powered by a twin-cam, 3.0-liter turbocharged inline six. It gives three of Toyota's five sales channels in Japan a luxury car. See story on Page 4.

Dealer survey: Program cars help

CHARLES M. THOMAS
Staff Reporter

Just two weeks before a National Automobile Dealers Association task force report on the nettlesome issue of program cars is due, an NADA Dealer Candidate Academy study shows an overwhelming percentage of dealers rely on program cars to keep them afloat in this sluggish economy.

Of dealers surveyed, 78 percent say program cars are helpful to dealers, 13 percent said they are not helpful and 9 percent were unsure.

The results don't surprise Richard Strauss, who serves on the task force and likely will be the next NADA president. He said most dealers concede that program cars have been helpful during this economic downturn. But the long-term effect on the franchise system should worry them.

"Program cars are a great sell today, but if they continue to come into the marketplace at current volumes, then the dealers who think they won't affect the franchise system over the long term have their heads in the sand," said Strauss, who owns Dick Strauss Ford-Isuzu-Suzuki in Richmond, Va.

"New cars and trucks are our core business," he said. "That's what we paid for to get our franchises, and not to sell used cars."

Among the dealers surveyed, 78 percent believe program cars steal new-car sales, and 22 percent said

Toyota exec bullish about Big 3 outlook

DAVID VERSICAL
National Editor

DETROIT — The Big 3 found an unlikely cheerleader on their home turf last week: the top strategic planner at Toyota Motor Sales U.S.A. Inc.

In a remarkable speech, George Borst, Toyota's vice president of strategic and product planning, predicted a rebound for the U.S. industry in 1992. And the Big 3, he said, will lead the way.

Sales will jump 1.5 million units to 14.2 million, Borst said. The Big 3, spurred by a wealth of new product, will collect 1.2 million of those sales, enough to earn an additional point of car market share and a half-point in trucks.

They were uncommonly genteel words from the top-selling Japanese brand in the United States.

George Borst says Big 3 will lead rebound in 1992.

Borst's boss, former Chrysler executive Robert McCurry, has held back few words when it comes to criticizing Detroit. But Borst, himself a former Chevrolet executive, said this is a "kinder, gentler Toyota for the 1990s."

No longer is Toyota saying, as it has for the past several years, that it intends to capture 1.5 million sales by mid-decade. And Borst dismissed suggestions that the new Camry has set out to wrest the U.S. car sales crown from the Honda Accord.

"We don't intend for the Camry

Ford adds rebate to bargain Escort

KATHY JACKSON
Staff Reporter

Ford Division has changed its one-price Escort program to help its dealers keep more money in their pockets.

The division last week added a $500 customer rebate as part of the package, reducing by $500 the dealer financial participation needed to arrive at the $9,999 price for any LX model with manual transmission.

The company began a test program last month in certain parts of the country in which it advertises every Escort LX model with manual transmission for $9,999. The vehicles have air conditioning, power steering, AM/FM stereo and rear defroster.

The special price of $9,999 initially was derived from the $11,092 sticker for a comparably equipped LX three-door model in this manner: The option package carried a $593 discount, and the dealer subtracted $500 from his margin for a total of $1,093. Some dealers say they can make only $500 on an Escort, so Ford Division changed the formula to absorb the dealers' $500 contribution.

Ross Roberts, Ford Division general manager, said, "The company reduced the amount we make (on Escorts) by a considerable amount" to try to help make the program a success. "We didn't want any inhibitors to this program," Roberts said. "We have to be competitive and keep our dealers profitable." The program is

Isuzu prepares new Trooper

A replacement for Isuzu's Trooper sport-utility will debut late next year as a 1993 model. The new Trooper gains about eight inches in wheelbase and overall length, and features more rounded styling. Engines will include both four- and six-cylinders, with talk of a 4.2-liter V-8 due a year later. Both two- and four-door versions will be offered.

state-owned Fabryka Samchodow Maloitrazowych, which has been producing Fiat 126 models under license since 1973.

The price is subject to an independent valuation of FSM's worth. But Fiat, which has already committed $500 million to build 160,000 of its new 500 microminis annually at FSM, said Friday it will invest $800 million more during the next six years.

Earlier this year, Fiat signed a preliminary agreement to buy 30 percent of VAZ, the Soviet, state-owned maker of Lada cars. That accord is valued at more than $1 billion.

Hyundai Excel prices rise $220 to $284

FOUNTAIN VALLEY, Calif. — Hyundai Motor America completed the pricing of its 1992 models by tacking increases of $185 to $284 on its Excel line. Earlier, the company announced hikes of $250 to $615 on the Sonata and $154 to $304 on the Scoupe.

The new Elantra sedans start at $8,995.

The base Excel three-door is $6,595 for 1992, up $220, and the GS hatchback is $7,599, up $254. Four-door sedan prices are $7,695 for the base and $8,499 for the GL. The base sedan is up $185, and the GL is up $284.

CAFE study may suggest 33 to 38 mpg by 2001

WASHINGTON — The Congressional Office of Technology Assessment is scheduled to issue its final report on fuel economy technology in time for a Senate debate on corporate average fuel economy that could begin Thursday.

The report is expected to produce three estimates of potential fuel economy. Under the "maximum feasible" scenario, a passenger-car CAFE of 38 mpg by 2001 would be possible if cost or consumer preference were not considered.

Another possibility assumes no new CAFE standards and gasoline at $1.50 a gallon. Under that view, CAFE could reach 33 mpg if consumers show increased interest in fuel economy and some new technology pans out. The other scenario says various government policies could produce CAFE gains somewhere between the other two figures.

The Senate is considering a measure that would require automakers to increase their CAFE scores 40 percent by 2001. The current standard is 27.5 mpg.

Volvo to offer bonuses to dealers

ORLANDO, Fla. — Volvo dealers will receive cash awards that are tied in part to customer satisfaction, as Infiniti Division already does and as BMW of North America plans to do.

Volvo Cars of North America's program offers dealers up to $1,500 per car sold. Payments will be made every six months and will be based on a formula that includes customer satisfaction, sales volume and — to a lesser extent — parts purchases.

Volvo reviewed its bonus plan with its 400 U.S. dealers in meetings here last week. Volvo dealers averaged about 220 car sales last year. At the maximum bonus level, those 220 sales would be worth $330,000.

Infiniti, the luxury division of Nissan Motor Corp. in U.S.A., said it gave 38 of its 89 dealers its maximum bonus of $25,000 for the first quarter of this year. Infiniti's payout is based on customer ratings of sales and service and evaluations by "mystery shoppers."

BMW is preparing a program that is more like Volvo's. It also takes sales volume goals into account.

U.S., Japanese makers talk trade in private

WASHINGTON — Representatives of U.S. and Japanese car manufacturers will meet in Tokyo next week for private talks about the U.S.-Japan automotive trade deficit.

Representatives of the Motor Vehicle Manufacturers Association and the Japan Automobile Manufacturers Association will meet Oct. 20 and 21. The sessions will take place at the same time as renewed discussions between government trade officials.

Last month, U.S. and Japanese negotiators agreed to study the barriers to sale of U.S. cars and auto parts in Japan.

Autolatina may market big German trucks

SAO PAULO, Brazil — German heavy-truck manufacturer Maschinenfabrik Ausburg-Nurnberg AG is negotiating to have Autolatina market its products. Autolatina is the holding company for Volkswagen and Ford interests in Brazil and Argentina.

S. Papke, the German company's export director for Latin America, told Brazilian financial daily *Gazeta Mercantil* that he will be in Brazil this month to sign the deal with Autolatina.

The trucks, with up to six axles and a cargo capacity of up to 150 tons, would form a new market segment in Brazil. Volvo, Scania and Mercedes-Benz now build Class 8 trucks here.

Delco Remy to build GM's electric motor

ANDERSON, Ind. — Delco Remy Division said last week that it will manufacture the propulsion motors for General Motors' electric vehicle.

In August, the division announced that it will make batteries for the GM electric at its Muncie, Ind., plant. In September, Hughes Aircraft Co., a GM subsidiary, opened a facility in Torrance, Calif., to make power electronics and charging systems for the electric vehicle.

The announcements mean GM has committed manufacturing facilities for the entire powertrain. GM previously announced that its electric vehicle, which it plans to build in the mid-1990s, will be assembled at the former Buick Reatta plant in Lansing, Mich.

The prototype propulsion unit is based on AC induction motor technology and features an integral gear reduction system, Delco Remy said.

briefly

Jerry Curry may fly again

Jerry Ralph Curry told a few people at an SAE meeting in Detroit recently that he was leaving the National Highway Traffic Safety Administration, but he didn't drop the other shoe. Maybe the Senate did. It confirmed Deputy Transportation Secretary Elaine Chao as the new head of the Peace Corps. Scuttlebutt says Federal Aviation Administration director James Busey will replace her, and Curry will replace Busey. Curry, a retired Army major general, has been a licensed pilot for 37 years, and he flew choppers and planes during two tours in Vietnam.

WINNER IS . . . NOT CHRYSLER — The Commerce Department last week handed its coveted Malcolm Baldrige National Quality Award to three small electronics companies, not **Chrysler Corp.** **Cadillac** had promoted its 1990 award heavily, and in January, Chrysler Corp. President Robert Lutz said Chrysler was preparing an application for the 1991 award that would encompass the entire corporation's "process redesign" of the way it conducts business. But Chrysler never entered. A spokesman last week declined to comment on why and when the company decided to drop the quest.

Robert Lutz: non-starter

VW FACES SHAME — Volkswagen AG board member Peter Frerk last week unveiled a granite memorial to slave laborers forced to build V-1 rockets for the company during World War II. Historians hired by **Volkswagen** decided that VW's boss then, Beetle inventor Ferdinand Porsche, went to Nazi Heinrich Himmler directly to recruit labor from the death camp at Auschwitz. Porsche was arrested but never tried for any war crime. He later founded the **Porsche** sports car company. His family says the five-year study was deceptive. Frerk said it would clear the record: "We owed it to the victims who suffered here."

CAFE BATTLE BREWS AGAIN — The auto industry's Coalition for Vehicle Choice has been advertising that higher corporate average fuel economy will mean smaller and more dangerous cars. Now the other side is speaking. The Communications Consortium is campaigning for higher CAFE standards, but with only a $50,000 budget, the consortium must depend on free advertising space and time to get its message out. In one TV spot, Ralph Nader recounts past opposition by carmakers to safety and fuel economy measures. It concludes, "Carmakers, don't slam the brakes on America — again." Don't look for it on TV, though.

MAZDA DEFIES CENSORS — **Mazda Motor of America** can expect some mail now that it has defied the American Family Association, the group that gave **Chrysler Corp.** a hard time for putting ads in *Playboy*. The conservative group describes NBC's "Saturday Night Live" as "tasteless, vulgar and offensive," and it asked Mazda to stop advertising on the show. Mazda wouldn't. So the Rev. Donald Wildmon sent copies of show scripts to about 350,000 followers and urged them to send postcards of protest to Mazda President Yoshinori Taura and local Mazda dealers. Stay tuned.

Parts group fights Nissan tariff break

LINDSAY CHAPPELL
Staff Reporter

NASHVILLE, Tenn. — Nissan Motor Manufacturing Corp. U.S.A. is close to building cars in Tennessee with enough North American content to be labeled "domestic," but a U.S. parts group says it isn't enough.

The break point for domestic classification is 75 percent. But the Automotive Parts and Accessories Association argues that more than half of the parts and materials going into U.S.-built Nissan Sentras and pickups are imported. The trade group has asked the U.S. government to reject or amend Nissan's application for greater tariff protection at its Smyrna, Tenn., plant.

The dispute arises as the U.S. parts community is pressuring Japanese automakers to increase purchases of U.S. parts.

The disagreement also brings to light some misconceptions surrounding the term "domestic content." Under the EPA rules that are used to separate cars into domestic and import fuel-economy fleets, manufacturers count such expenses as overhead and labor as well as actual parts to determine their North American content.

Under that formula, Nissan and other Japanese transplant makers are closing in on the 75 percent "domestic" threshold. And the transplants have cited the higher domestic content figures as evidence of their growing investment in the U.S. economy.

But Nissan concedes that despite its higher "domestic content" figure, imported parts still account for about 60 percent of its vehicles' parts content. And that, says the Automotive Parts and Accessories Association, is "disturbing."

The association, which represents about 800 U.S. suppliers, has objected to a Nissan application now before the Department of Commerce's Foreign Trade Zone Board. Nissan's current foreign trade zone status allows it to import parts duty-free for 240,000 cars and trucks annually. Nissan has asked for the same status for a plant expansion scheduled to boost capacity to 450,000 next year.

A foreign trade zone annual report, published late last year, indicates that Nissan imported $858 million in parts and materials in 1989, or 65 percent of total expenditures. It purchased about $471 million worth of goods from U.S. companies.

In its challenge to the application, the parts group claims that Nissan vowed in its original 1981 trade-zone application that imports would account for 60 percent of its parts and materials at the beginning of production in 1983, and eventually would drop to 40 percent.

The group called it "disturbing that after eight years of truck production and a 1985 expansion to assemble cars, (Nissan) has not met its lackluster long-term 60-percent goal, or even the scant 40 percent domestic sourcing level it pledged at the outset of production."

Nissan spokesman Bucky Kahl defended the firm's progress in sourcing U.S. parts and materials. He said that foreign purchases dropped to 60 percent in 1990 and will continue to decline.

"It doesn't seem fair to extract

GM dealers score with group buy

Texas associations pool ad funds

ARLENA SAWYERS
Staff Reporter

Members of General Motors dealer associations in southeast Texas set aside their competitive differences long enough to conduct a joint 10-day, $990,000 inventory reduction ad campaign.

Billed as the Texas Gulf Coast GM Dealers, 86 dealers representing 130 franchises and six GM divisions sold 3,047 new vehicles from Aug. 23 through Labor Day — a 47 percent improvement over the last 10 days of July.

Sales for the zones in which the dealers are located were collectively down 2.5 percent from the last 10 days of July.

It was the first time six GM dealer associations in the southeast Texas market joined forces in one advertising effort.

George DeMontrond, president of Houston's Buick ad association, said the dealers pooled their resources, giving them a bigger share of voice and a united front against import sales.

"The imports are very aggressive in our market," said DeMontrond, owner of DeMontrond Buick.

"Together, we had more to spend than any one association. We were extremely satisfied," he said.

The 28-member Buick association collectively increased its sales 62.5 percent over July.

Cadillac dealers increased their sales by 146.3 percent followed by GMC Truck dealers, up 90 percent; Chevrolet dealers, up 41.5 percent; Oldsmobile dealers, up 33.3 percent and Pontiac dealers, up 6 percent.

The associations paid for the program out of their ad association fees and matching funds contributed by their divisions.

Buick, Cadillac, Chevrolet, Oldsmobile and the joint Pontiac/GMC Truck association each kicked in $80,000. Added to that was another $200,000 in factory funds and about $300,000 spent by individual dealers.

Despite the success of the program, some dealers were not happy with its financial make-up.

James Masten, president of the 23-member Pontiac/GMC Truck association, said some dealers believe that since Chevrolet dominates the market, the Chevrolet group should have paid a higher percentage of the cost.

Joseph Pollaro, president of Pollaro Media Advertising & Productions, created the campaign and coordinated the effort with the groups and ad agencies. AN

NEW RECIPE

Reformulated gasoline can help cars meet new emission laws

JACK KEEBLER
Staff Reporter

The low-emissions alternative fuel of the future is gasoline — reformulated gasoline.

That is what automobile and oil interests are saying after completing research that examines the level of clean-up provided by chemically reformulating gasoline.

And although not fully convinced of reformulated gasoline's ability to provide the very best emissions levels, EPA and California Air Resources Board sources say they are open-minded about reformulated gasoline combined with advanced electrically heated catalytic converters.

Preliminary tests by the consortium, the EPA and the California Air Resources Board indicate vehicles powered by reformulated gasolines and using electrically heated catalysts might pollute the air no more than the best alternative-fuels vehicles powered by methanol, ethanol, propane or even natural gas.

"I firmly believe that this will be the case," said Joseph M. Colucci, head of General Motors' fuels and lubricants department. "I have stopped saying and thinking that we can't do it."

Bill Sessa, press secretary for the California Air Resources Board, said the level of clean-up described by Colucci for future gasoline-powered vehicles has not been determined.

"M85 (a fuel blend of 85 percent methanol and 15 percent gasoline) might still have an emissions advantage," Sessa said. "We're still looking at that. But there's no question that reformulated gasoline with an electrically heated catalyst will meet our '94, '95 and '96 standards.

"But given the different reactivity of exhaust from flex-fuel cars, the flex-fuel car might still have an environmental advantage. But that is not a firm conclusion."

When fuels experts refer to the reactivity of a particular fuel, they are talking about the propensity of the hydrocarbon part of the exhaust to photochemically react with oxides of nitrogen and sunlight to form ozone.

According to Steve Albu, branch chief for engineering studies at the California Air Resources Board, California has tested a Buick LeSabre and a Toyota Celica withelectrically heated catalysts on the federal test procedure.

And the results were impressive. The LeSabre with a V-6 produced 0.03 grams per mile of hydrocarbons, 0.34 gpm of carbon monoxide and 0.19 gpm of oxides of nitrogen. The four-cylinder Celica produced 0.03 gpm of hydrocarbons, 0.50 gpm of carbon monoxide and 0.07 gpm of oxides of nitrogen.

Electrically heated catalysts use battery power (3,000 to 5,000 watts), to preheat the catalyst for 10 to 15 seconds before engine start-up.

Engineers claim that up to 80 percent of the emissions recorded

Cunningham, Recchia on World Congress list

Theodor R. Cunningham, executive vice president of sales and marketing for Chrysler Corp., and Richard D. Recchia, executive vice president and chief operating officer for Mitsubishi Motor Sales of America Inc., will address the Automotive News World Congress on Monday morning, Jan. 13.

The 16th Automotive News World Congress will be held Jan. 12-15 at Detroit's Westin Hotel in conjunction with the North American International Auto Show.

Cunningham directs all activities of Chrysler's U.S. and Canadian sales, fleet and marketing organizations; Service and Parts Operations and the Pentastar Transportation Group. He was vice president of Service and Parts Operations before being appointed to his present post in November 1990.

Cunningham joined Chrysler in 1968 and became national sales manager in 1981. He was named general manager of U.S. automotive sales in October 1982.

In 1985, he was named general manager of Import Operations and vice president of sales and market-

service

SERVICE INDEX 95.4*

	Aug., '91 vs. Aug., '90	Jan.-Aug., '91 vs. Jan.-Aug., '90
Gross Profit on All Labor and P&A Sales	– 3.6%	1.2%
Repair Orders Written	– 0.6%	0%
Total Labor Sales (Customer & Warranty)	– 7.9%	– 0.1%
Shop Parts Sales (Customer & Warranty)	+ 1.4%	+ 2.6%
Sales of All P&A	– 3.4%	– 1.4%

* Survey by Automotive News shows that dealers' service and parts business in August 1991 was 95.4 percent of business in August 1990. Service business in the first eight months of 1991 was 98.9 percent of business in the corresponding period in 1990.

Service work declines

DETRO — New-car dealerships are still feeling the effects of the recession in the backshop as well as in the showroom.

Parts and service business in August was 95.4 percent of the total for August 1990, as measured by the Automotive News Service Index. It was the fourth consecutive month that business trailed the year-earlier total.

After eight months, service business was 98.9 percent of the figure for the same period in 1990.

Shop parts sales was the only indicator to post an increase for the month, rising 1.4 percent. Parts sales also was the only category to show a gain for the year.

The largest decline for August was in total labor sales, off 7.9 percent from a year earlier. Also taking hits were gross profit on all labor and parts sales, down 3.6 percent; sales of all parts and accessories, down 3.4 percent; and repair orders written, down 0.6 percent.

Figures used in the Automotive News Service Index are compiled from monthly reports on service and parts business from a cross-section of new-car dealers. AN

Toyota opens service center

KRISTINE STIVEN BREESE
Staff Reporter

TORRANCE, Calif. — Toyota Motor Sales U.S.A. Inc., which has been on a spending and building spree across the country this year, added another jewel to its crown this month when it dedicated a $25 million Service Development Center here.

Located across the street from the national headquarters for both Lexus and Toyota, the facility houses the company's diagnostic and product quality testing equipment. In addition, the center develops the curriculum used to train Toyota technicians and trade-school students.

The center occupies a 110,809-square-foot building on 4.3 acres of land.

Yuki Togo, Toyota president and chief executive officer, called the facility "a good example of Toyota's commitment to providing the best quality products and customer service in the industry." He stressed that the center will be vital in keeping technicians up to speed as Toyota products become safer, cleaner and more environmentally friendly.

To that end, the center routinely hosts service managers, administrators and technician instructors, who come to learn about the latest in Toyota product technology. They take that information back to dealerships and schools.

Also, Toyota will use the center to build expertise in areas once considered the sole purview of small service and repair facilities.

For example, Toyota expects that many small body shops won't be able to operate as cleanly as required by new environmental laws and still make a profit, forcing them to abandon that market.

So Toyota plans to take up the slack and take advantage of a key business opportunity. The company is putting more emphasis on teaching body repair techniques that are environmentally sound.

The center is responsible for at least four areas of Toyota's service activities, said Richard Gallio, vice president of parts and service for U.S. products.

The biggest is training and education. Some 8,100 technicians and almost 1,000 service-technician students around the country rely on curriculum provided by the center to work on Toyota products.

When a product is introduced or when new technology finds its way into any Toyota product, the center provides training support. That support varies; it can be as thorough as an in-house teaching session or as simple as sending new service guidelines to dealerships. The center produces six training videos each year.

Another activity is inspecting components from U.S.-based suppliers. That responsibility is shared by the center and Toyota's technical centers in Torrance, Calif., and Ann Arbor, Mich.

One of the biggest areas handled by the development center is evaluating accessories, such as bicycle racks, floor mats and center console cushions. "Things that they don't need or don't have in Japan, things that are more suited for this market," said John Shurtz, technical training program manager.

Working with everything from drill presses to computers, engineers and designers test and adapt accessory pieces to find the best ones to send to the ports or to dealers for installation.

Another area of the center is devoted to studying faulty parts returned by dealers. Particularly right after the introduction of a new product, dealers are asked to send in broken or weak parts discovered when servicing a customer's car.

Shurtz said it helps Toyota spot a problem and fix it before it gets out of hand. The parts are torn down and studied at the center, and reports are sent to Toyota engineers in California and Japan.

Finally, the service center is a dealer-technician support operation. Lexus and Toyota dealers can call the center via a toll-free telephone number, and questions are fielded by staff troubleshooters. AN

Center serves as base for technician program

KRISTINE STIVEN BREESE
Staff Reporter

TORRANCE, Calif. — To ensure that it will have an adequate pool of well-trained technicians to fill dealers' service bays in the future, Toyota continues to build its Technical Education Network (T-Ten) program.

With technicians in short supply, Toyota believes its commitment to T-Ten is well worth the cost. It spends $120,000 to $160,000 to establish a program and another $50,000 to $70,000 annually to support it.

Toyota boasts that 95 percent of the students who complete the two-year T-Ten program go on to work at Toyota dealerships.

Toyota recently dedicated a new $25 million Service Development Center near its Torrance, Calif., headquarters to serve as the "main campus" for the instructors who teach at the 62 schools that are T-Ten affiliates.

At least once a year, teachers will visit the Torrance facility to learn about curriculum changes and new models and to get a business update. Teachers meet more frequently at Toyota's 12 regional offices.

The center also will prepare videos and classroom literature that the teachers will use to keep students apprised of Toyota's technological developments.

Toyota began the program in 1986. From a pilot plan on 20 campuses, T-Ten now boasts nearly 1,000 students at 62 schools. In return for providing items such as parts, entire vehicles, diagnostic equipment and classroom materials, Toyota asks that each school set aside a specific area for T-Ten instruction.

The beauty of the system is its flexibility, according to several T-Ten instructors. Program directors and instructors from campuses across the country met recently for three days of instruction at the new center.

One recalled that General Motors wanted its facility used for training its technicians to remain empty when class was not in session.

Toyota, on the other hand, asked only that its area be exclusively Toyota's during class time.

Dennis Meyers, program chairman/instructor for automotive technology at Texas State Technical Institute in Waco, Texas, said his course may be nothing like the program offered by a colleague at another school, and that's the key to its success.

"We've got the flexibility to adapt the materials as needed. That means I can make it successful and make it fit the needs of my students," he said. "Every student I've turned out has gone with a Toyota dealership."

The program has been so successful that it has been adopted in Japan and expanded worldwide, said Mamoru Kaida, a Toyota Motor Corp. director who supervises worldwide service activities for the company outside the Japanese market. AN

GM testing specialty service program for dealers

PHIL FRAME
Staff Reporter

General Motors is launching a test program in Columbus, Ohio, aimed at the strengths of oil change, brake, muffler, tire and tune-up shops: convenience, cost, quality and trust.

Those factors now are what lead a GM car owner to visit a specialty shop rather than a GM dealer for routine service, said Richard J. Sherman, executive director of service marketing for GM's customer sales and service staff.

The Columbus program — called GM Goodwrench Service Plus — is designed to grab back the business lost to specialists. The participants are 14 of 22 Columbus-area GM dealerships representing all GM marketing divisions except Saturn.

"Convenience, cost, quality and trust are the four primary dimensions of owner behavior which we are influencing with our project in Columbus," Sherman said.

Participating dealers are dealing with convenience by extending service department hours to evenings and weekends; by conducting most service while customers wait; and by providing free transportation in cases when the service can't be done on the spot.

All of the dealers in the program are involved with GM's Quick Lube Plus program, which guarantees oil changes in 29 minutes or less.

GM Goodwrench Service Plus also incorporates the GM Quick Service Plus program, which guarantees quick completion of shock replacements, engine maintenance, brake inspections, front-end alignments, air conditioning service, radiator flush and fill, tire rotation and transmission service.

"The quick service portion of it only applies to those items where quick is important in the eyes of the customer," Sherman said. "You don't want quick brain surgery and you don't want quick brake service."

Cost competitiveness with the specialty shops is being considered on several levels, he said. "We'll address those issues with pricing strategies, as well as a lifetime parts and service guarantee for 10 categories of service."

Sherman's assistant, M.J. (Marty) Zwolan, said service and maintenance involving air conditioning, brake system, shocks/struts, front-wheel drive, lube/oil/filter, emission controls, fuel delivery, ignition system, cooling system and transmission will be covered by the guarantee.

JOE WILSSENS/AN

Goodwrench Service Plus makes it easier to get service at GM dealerships, says Richard Sherman.

The two major elements of cost — parts pricing and labor rates — also are being addressed, Sherman said.

Although declining to be too specific, Sherman said the labor rate strategy could be compared with a public relations agency, which charges hourly rates based on the experience and skill level of the employee needed to do a job properly.

Sherman also asserted that dealers already are in a position to buy parts at a rate that is competitive with specialty shops. Again declining to be more specific, Sherman said the retail price of parts depends on the degree of markup applied to a part as the dealer moves it from the parts department to the service department to the customer.

"That can be addressed," Sherman said.

David Reiss, market research director for the Motor and Equipment Manufacturers Association said he doubted whether dealers can compete in price with specialty shops and whether dealerships had enough capacity to handle a major increase in routine maintenance business.

Sherman responded: "To your doubting Thomases, we know absolutely we can be competitive."

One major component of GM Goodwrench Service Plus is training service writers, "establishing a different type of behavior at the service write-up area.

"That's why we're, among other things, going to a service menu, which addresses what we've determined to be the services most often sought outside of the dealer environment," Sherman said. "We will establish a competitive service and parts price that is inherent in that service menu. We also have trained and are training service advisors and technicians on how to operate more in a retail environment."

That may involve doing some diagnostic work as a matter of routine. For example, a technician may hook up a car to a hand-held diagnostic tester or to GM's Computerized Automotive Maintenance System while an oil change in being done to see if other service should be done beyond what the customer wanted.

GM Goodwrench Service Plus is the third step — after Quick Lube Plus and Quick Service Plus — in GM's attempt to help dealers boost their service business.

Other efforts are being planned, Sherman said, but the key now is to win the battle of Columbus. AN

Nissan readies continuously variable transmission

System designed for larger engines

RICHARD JOHNSON
Staff Reporter

TOKYO — Nissan Motor Co. is working on a continuously variable automatic transmission that it says could be fitted on cars with much larger displacement engines than existing production continuously variable transmissions.

Nissan engineers say its new toroidal traction system would permit shifting under all conditions for cars with engines displacing 3.0 liters and more. Until now, belt-drive continuously variable transmissions have been limited to smaller displacement because of the belt's limited power transmission abilities.

Although the company will display a mockup at the Tokyo auto show later this month, a production version is unlikely before the end of the century, said a Nissan spokesman.

"We are just in a stage of basic research," he said. "We don't see any commercialization soon."

The electronically controlled toroidal traction unit transmits power using the viscous shearing force of a thin lubricant film. Friction is reduced with a single set of cams.

A toroidal traction continuously variable transmission is not a new idea: General Motors experimented with it in the 1930s and Ford sought unsuccessfully to get the technology off the ground in the 1970s.

But Nissan engineers say that such barriers as poor viscosity of traction fluid, strength limitations for various parts and problems with synchronization control hampered past attempts to perfect the technology.

Nissan says its transmission uses disks and rollers and utilizes "superior materials" and high-performance traction fluid. The result, the company says, is smooth, stepless automatic shifting and improved fuel economy.

In a similar vein, Nissan says it helped Fuji Heavy Industries improve Fuji's electronically controlled continuously variable stepless automatic transmission for small displacement engines. The unit will appear first in a small Nissan car due early next year.

Earlier this year, Italy's Fiat Auto SpA said it was working on a "high torque" unit that could handle cars with engines larger than 2.0 liters.

That unit, also several years from production, is based on Fuji's electronically controlled continuously variable transmission unit.

Nissan announced that it plans to equip a new small car early next year with its N-CVT unit, a belt-drive continuously variable transmission developed with Fuji and derived from the electronically controlled version.

The new model wasn't announced, but is expected to be the Nissan March/Micra replacement due in 1992. Subaru's Justy successor is likely to share components with the March/Micra and to use the refined continuously variable transmission.

The unit is basically the same as Fuji's, which was introduced in 1987. But a spokesman said Nissan has made various improvements to the unit that yield better fuel efficiency and less noise.

Fuji will manufacture the N-CVT for Nissan, which declined to estimate production volume.

Nissan has a small equity stake in Fuji, the maker of Subaru cars and trucks, but has effective management control.

Saturn dealers top 'em all in Sept. sales per outlet

KAREN DETKOWSKI
Statistician

Saturn Corp. topped the sales-per-dealer list in September for the first time, according to *Automotive News* calculations.

Toyota fell to third in September, behind Saturn and Honda. Toyota has held the top spot for overall car and truck sales four times since the introduction of the monthly sales-per-dealer calculation in April.

Saturn dealers reported a sales increase of 15.4 percent over August, which resulted in six more deliveries for each Saturn outlet.

Toyota reported a 27.8 percent decrease in car sales from the previous month and a 31.2 percent drop in trucks. Honda sales slipped 14.8 percent, but its dealers moved into second place.

Dealers contended with a selling period of only 24 days in September, the shortest selling period since last February.

Of 41 car and truck makes, 11 rose above August in sales per dealer and three remained constant.

Incentives to customers and dealers during a ferocious Ford-Chevrolet battle for model-year sales supremacy boosted September's average sales per franchise by six units for Ford and four units for Chevrolet. All of Ford's gain and most of Chevrolet's was in trucks. Ford has led in truck sales per dealer for five of the past six months.

Volvo sales fell to nine per dealer in September, down from 16 in August. Volvo reported its lowest sales of the year in September and its lowest September sales since 1981.

Volvo said it believes the car market is overheated as a result of almost two years of nearly continuous incentives and that consumers are confused by the variety of new products that debuted in September.

Volvo will introduce its 1992 line this month.

House bill promotes car recycling

WASHINGTON — A New Jersey Congressman has introduced a bill that would require a federal study of ways to promote recycling of the materials used in automobiles.

Robert Torricelli's bill calls for the EPA to convene a panel of experts to look for ways to promote recycling.

Members on this panel would come from the auto industry, private agencies, state and local governments, and auto dismantlers and recyclers.

The fifth-term Democrat said 10 million cars are scrapped each year in the United States. While the metal is recovered, 25 percent of the car's weight is discarded, most of it into landfills.

"If cars are designed properly from the very beginning, we could recycle about 95 percent of the materials used to build them," Torricelli said.

A particular concern is the number of different types of plastics that are used in increasing amounts in newer automobiles, Torricelli said.

Europeans drag down import sales

LINDSAY CHAPPELL
Staff Reporter

Declining sales for European lines darkened the overall picture for imported-car sales in the United States last month.

September sales of imported cars fell 5.35 percent below the year-ago month.

Still, the performance was better than the combined import and domestic car market, which slid 14.2 percent.

Japanese lines saw a bit of improvement in September, and Korean cars held steady. But the Europeans — led by Volkswagen and Volvo — continued a sales slide that has eaten away 18 percent of their volume so far this year. The September dip was 27.5 percent.

Volvo suffered a 57 percent sales drop for the month, most of it due to a sharp drop in sales of its 700-series cars. The monthly results, which the company blamed on industry incentive practices and a wide array of competing new-model introductions, represent the worst sales month for Volvo line since 1981.

Volkswagen's 34 percent setback was due mostly to a decline in Jetta sales, its highest-volume car.

Ironically, two exceptions to the trend were two companies leaving the market: Sterling (up 0.35 percent) and Peugeot (up 66.3 percent). AN

As you fill up your car at the service station you can smell the sharp scent of gasoline. And on a warm sunny day, you can even watch the gasoline waves boil and swirl around the pump nozzle stuck in the tank filler neck.

These sharply scented and wildly boiling hydrocarbon gasses are displaced from the vehicle's fuel tank by the incoming liquid fuel. And these refueling vapors contribute significantly to the air-pollution problem.

A long-standing controversy is raging again between automakers and petroleum refiners as they are being forced by the 1990 Clean Air Act Amendments to clean the vapors up.

The controversy centers on which group can most cost-effectively and safely handle a billion-dollar problem that most people never notice.

Some states and the federal government want the vapors captured before they do harm by exposing people directly to a suspected carcinogen or by reacting chemically with oxides of nitrogen and sunlight to create low-level ozone.

The topic of onboard vapor containment has heated up in recent weeks as the EPA approaches a Nov. 15 deadline for writing regulations requiring vehicles to be equipped with vapor-recovery systems for the 1996 model year.

■ TWO CONTROL OPTIONS

Two primary ozone-control strategies are being considered: onboard vapor-recovery canisters and Stage II vapor-recovery systems in service stations. A third ozone-control option is to reduce gasoline's propensity to evaporate and vaporize.

One primary option is to capture the vapors in a large tank or canister within the vehicle. The vapors would be circulated into the engine during running and consumed by the combustion chamber and catalyst. Carmakers would, of course, pass on the cost of this vapor recovery device to customers. Per-vehicle cost estimates for systems range from an oil industry low of $13 to a General Motors high of $80.

The other primary strategy is to capture these vapors in a system installed on the service station's pumps. These are called Stage II systems, because stations already have Stage I systems that collect vapors when fuel-delivery trucks fill their underground tanks.

Stage II systems have been in use in California for a number of years. They are also in use in Washington D.C., and St. Louis. And they are currently being installed at stations in New Jersey and New York. Other states are considering them.

The third control strategy — important by itself or in combination with the other controls — is a large reduction in gasoline's volatility, that is, the ease with which the fuel evaporates. Reducing gasoline's volatility is one of the chemical reformulations being considered by the EPA and the Auto/Oil Air Quality Improvement Research program.

But refiners tend to fight reductions in volatility because it means they must use less low-cost butane in their fuel blends. According to the EPA, controlling gasoline volatility would cost only 2 to 3 cents per gallon and would reduce total current hydrocarbon emissions nationally by 8 percent. Refiners say the cost might be closer to 16 cents per gallon.

"Reformulating gasoline is the single most environmentally significant initiative we can take to reduce air pollution," said EPA Administrator William K. Reilly. The Clean Air Act requires reformulated gasolines in the nine cities with the highest ozone levels by 1995. The law also allows any other city exceeding the federal ozone standard to adopt a reformulated fuels program.

■ A CASE FOR CANISTERS

Oil company interests, including William F. O'Keefe, the American Petroleum Institute's chief operating officer, favor hardware on vehicles. O'Keefe told EPA hearings in Detroit last month that the congressional mandate to require refueling canisters on vehicles beginning with 1996 model cars and trucks was "clear and unambiguous."

But car companies say the Clean Air Act amendments mandate that the EPA issue regulations only after consultation with the National Highway Traffic Safety Administration.

NHTSA seems concerned about the safety of installing these devices. Carmakers report that agencies such as NHTSA, the National Transportation Safety Board and the Insurance Institute for Highway Safety have warned that the on-board system would pose "a significant fire hazard if it failed during normal driving or ruptured during a crash."

But the petroleum industry disputes any deterioration in vehicle safety. In fact, O'Keefe told the EPA that safety might improve.

"We should expect to see safety improvements through the adoption of the refueling canister system," he said. O'Keefe maintained that the new systems would simply be "an expansion of existing technology which has already proven safe over two decades of use on cars and trucks."

Carmakers maintain that the problem and these systems are not that simple.

"These canisters would be three or even four times larger than the 850 cc to 1,500 cc containers now used for capturing fuel systems evaporative emissions," said Jim Pasek, GM's manager of federal activities.

"They are not simply an extension of our existing technology. NHTSA did some testing and they rightly asked, 'Why take the risk.' "

Pasek said that additional danger would come from the unproven nature of the new systems; the additional, larger and more complex system plumbing; more connections and fitting the larger canister into existing body structures.

The petroleum industry has been developing and testing demonstration refueling canister systems for vehicles since 1978, according to O'Keefe. The industry hopes to prove that these systems are safe, effective, practical and cost effective to government regulators.

Initially, that would help them avoid the installation of additional Stage II systems at fueling stations. Later, once onboard systems were in wide use, it would mean that Stage II systems would be waived by the EPA, according to O'Keefe.

There are two major issues that on-board canisters do not address: First, they would be installed only in new vehicles. That might mean that it would be 15 to 20 years before all vehicles had the canisters. Stage II systems could be installed in as little as three to four years and would control vapors from all vehicles.

Second, ozone is a regional problem. Carmakers point out that the most cost-effective way to deal with the problem is in the ozone non-attainment areas.

Canada sales rise 9.85%

ANNE E. WRIGHT
Chief Statistician

Car and light-truck sales in Canada made a comeback in September, rising 9.85 percent over the same month in 1990.

The performance bolstered industry hopes for an economic turnaround in Canada. A 9.0 percent drop in August broke a string of four consecutive monthly gains, and executives hailed September's performance as proof that the recovery has begun.

"The outlook is much better," said James G. O'Connor, president and chief operating officer of Ford of Canada. Although sales still vary by region, the economy "has at least bottomed out," O'Connor said.

The prime lending rate, for example, is now about 9.5 percent, down from 14 percent a year ago.

With the September performance, nine-month sales of cars and light trucks in Canada trailed 1990 by only 1.7 percent.

Car sales rose 8.3 percent in September, lifting year-to-date volume to 703,116, just 0.3 percent below the year-ago total.

Truck sales were up 13.5 percent in September over the same month in 1990. For the year, the deficit narrowed to 4.6 percent below 1990.

Each of the Big 3 and nine importers posted gains for the month. Suzuki was up more than 100 percent for the second straight month, and Nissan jumped 72.5 percent.

Hyundai, Jaguar, Mercedes-Benz, Toyota and Volvo reported double-digit percentage losses.

For the year, Chrysler was the only Big 3 company to report an increase over 1990. Importers reporting nine-month gains were: BMW, 10.5 percent; Honda, 5.5 percent; Nissan, 13.54 percent; Peugeot, 53.5 percent and Subaru, 12.89 percent.

Staff Correspondent Jeremy Sinek in Toronto contributed to this report.

Ford predicts strong finish

TORONTO — Even though new-vehicle sales were down 1.7 percent through September, Ford of Canada officials believe the industry will rebound and finish above 1990's total of 1.3 million units.

The company predicts 1.35 million car and truck sales this calendar year and a 6 percent increase in 1992. Falling interest rates and rebounding consumer conference are two reasons given for the optimistic estimate.

Fifty-six percent of Canadians surveyed by Ford believe the next 12 months will be a good time to buy a new car.

Ford also said it will follow the U.S. lead and adopt a single-price policy on the four-door, five-door and wagon versions of the Escort LX. Manual transmission versions will sell for $11,695 ($10,359 U.S.).

Vehicle stocks remain lean

JIM HENRY
Staff Reporter

The inventory of domestic-built cars on Oct. 1 was the lowest for that date in nine years, with 1,081,100 million units in stock.

And the days' supply of domestic light trucks was down sharply from 75 a month earlier to 61.

Ford beat Chevrolet in an end-of-model-year sales race that cleared the shelves of full-sized pickup trucks. Ford's inventory of F-series pickups fell to 32 days from 84 days on Sept. 1. Chevy had a 46-day supply of C/K pickups, down from 90 days on Sept. 1.

Although domestic car stocks were lower than a month earlier, the days' supply rose to 53 from 50. And while the days' supply of domestic trucks plunged, there were more units in inventory than on Sept. 1. Changes in the production and sales mixes account for those apparent paradoxes.

On Oct. 1, the industry had a relatively lean 58-day supply of domestic and imported cars and light trucks — down slightly from 60 days a month earlier.

Inventories swelled a bit for Toyota Motor Sales U.S.A. Inc., which began September with a thin 23-day supply. As of Oct. 1, Toyota was at 31 days, matching American Honda Motor Co. Inc. for the lowest days' supply of any active company.

The final countdown continued for Peugeot Motors of America and Sterling Motor Cars, each with less than a month's worth of cars in dealers' hands. Both companies announced in August they had quit importing new cars. Peugeot reported a 25-day supply on Oct. 1; Sterling had 20 days. AN

GASOLINE

New formulas mean cleaner air

continued from PAGE 3

during the federal test procedure occur during the first three minutes of warm-up when the catalyst is cold.

■ UNITED EFFORT

In an effort to ensure gasoline's place in the motor-fuels continuum, the Big 3 and 14 U.S. oil companies formed a research consortium in October 1989. It is called the Auto/Oil Air Quality Improvement Research Program.

This reformulation study is crucial because despite giant emissions clean-up strides, gasoline-powered vehicles have remained a significant contributor to air pollution problems.

Even with electronic control of fuel and spark, fuel-vapor recovery systems and catalyst control of exhaust emissions, the increasing number of vehicles and miles driven each year make vehicles a serious air pollution problem — particularly in large metropolitan areas. About 100 cities in the United States are not in compliance with the National Ambient Air Quality Standard for ozone.

"Regardless of the level of clean-up so far, gasoline-powered vehicles are still a major source of pollution in this country," said Paul Machiele, an EPA project manager at the Ann Arbor, Mich., emissions laboratories. "And they remain one of the most cost-effective targets."

Emissions experts at the EPA and the California Air Resources Board confirm that the results from the auto-oil consortium effort have been "extremely helpful" in writing new regulations.

Colucci, who is a co-chairman on the auto-oil consortium's task force, says there are several reasons why reformulated gasoline makes sense for both carmakers, refiners and consumers.

■ It is dispensed from a conventional gas pump and the delivery infrastructure is already in place.

■ Reformulated gasoline can be used in conventional vehicles, providing an immediate emissions reduction from all vehicles without modifications.

■ Reformulated gasoline will likely be priced competitively with non-reformulated gasoline. The EPA estimates the price increase to be about 5 cents more to refiners.

"Part of the problem in determining how much it'll cost is determining how much people are willing to pay for cleaner gas," said William F. O'Keefe, vice president and chief operating officer of the American Petroleum Institute.

"Surveys I've seen suggest people are willing to pay a nickel more. But possibly not 16 cents more. I would guess that the initial cost to the refiner would be anywhere between five and 10 cents. But as demand grows those costs could go up considerably depending on the level of changes to individual refineries," he said.

The private company and government sources agree that the price at the pumps, naturally, will depend on market pressures.

There are many different ways to chemically change gasoline to reduce emissions.

One way to reduce evaporative emissions is to reduce the fuel's volatility or propensity to evaporate. This is done by reducing the amount of "light-end" hydrocarbon blends that evaporate at higher ambient temperatures. Another way to provide an emissions reduction is to make the hydrocarbon molecules of the fuel less complex and easier for the combustion chamber and catalytic converter to digest into carbon dioxide and water vapor.

Another refining alteration might produce a less reactive hydrocarbon molecule that does less to contribute to ozone formation. Yet another modification blends in oxygenates — like methyl tertiary butyl ether, derived from methanol — that make the engine run slightly leaner (oxygen rich) and reduces carbon monoxide emissions. A final reformulation trick might be to blend in a better deposit-control additive to help keep intake ports, intake valves and injectors clean.

■ FIRST STEPS TAKEN

Eight American petroleum companies have already introduced mildly reformulated gasolines. Most have been introduced in major metropolitan areas.

But these fuels do not meet the strict letter of the law in the Clean Air Act. It stipulates that reformulated gasolines must be on sale by Jan. 1, 1995, in nine U.S. cities that fail to meet national ozone standards.

The act also states that reformulated gasolines meet a performance standard that requires a 15 percent reduction in volatile organic compounds and toxics from vehicles with no increase in nitrogen oxides.

ARCO was the first company to introduce a more environmentally benign gasoline when it brought EC-1 (emission control) to the South Coast Air Basin of California in September 1989. This unleaded grade replaced a leaded regular fuel and was to be used only in leaded-fueled vehicles.

ARCO recently introduced an EC premium that it claims reduces aromatic hydrocarbon, carbon monoxide and benzene emissions.

Other companies offering more environmentally benign fuel are Diamond Shamrock, Conoco, Phillips, Marathon, Shell, Exxon and Chevron. These fuels are being offered in various markets across the United States.

Paul Machiele, project manager at the EPA's Ann Arbor, Mich., emissions labs, reflected on the usefulness of the consortium.

"Working with the consortium hasn't always been easy," he said. "But it has been extremely effective at getting all of the parties together. In that way, they will probably be more happy with final regulations." AN

Oil industry research helps regulators

JACK KEEBLER
Staff Reporter

The Auto/Oil Air Quality Improvement Research Program is a cooperative research program initiated by the Big 3 and 14 petroleum companies.

It conducts research and testing to develop data for use by regulators on the potential improvements in vehicle emissions and air quality — primarily improvements in ozone — from reformulated gasoline, other alternative fuels and developments in automotive technology.

In December 1990, the consortium released its initial findings from a $15 million phase one program and announced a second phase at a projected cost of $25 million. Some of the things already discovered about gasoline reformulation include:

■ Adding oxygenates like methyl tertiary butyl ether and ethyl tertiary butyl ether reduces the amount of exhaust emissions (hydrocarbons and carbon monoxide) and the benefits have been quantified.

■ Reducing gasoline olefin content reduces ozone formation, due to its impact on evaporative, running-loss, refueling and storage emissions.

■ Reducing aromatics and the boiling range of gasoline (referred to as T90) also reduces exhaust emissions.

During the initial research phase 2,200 vehicle emissions tests were conducted with 53 cars and light-duty trucks with 29 reformulated gasolines.

The tests were carried out at GM and Ford Motor Co. certification labs. Vehicles tested included 20 1989 model cars and light trucks, 14 1983-85 model vehicles and 19 prototype flexible- and variable-fuel vehicles.

The reformulated fuels tested to date include 16 fuels with varying amounts of aromatic, olefin and methyl tertiary butyl ether and different boiling ranges. AN

Program car volumes to hold steady in '92

CHARLES M. THOMAS
Staff Reporter

INDIANAPOLIS — Program vehicle volumes are expected to remain at about the same levels in 1992 as this year, even though the Big 3 are lengthening the time daily rental units stay in service before being remarketed to dealers.

Program vehicle sales are estimated at about 1.5 million units this year, which is up slightly from last year. Program vehicle sales next year are expected to edge up even higher as Japanese automakers increase their fleet projections. Nissan Motor Corp. in U.S.A. began phasing out its program car sales in 1990 but said it is re-entering the market this year.

Ford, General Motors and Chrysler have increased the length of time and mileage that program vehicles spend in service, largely because dealers grumbled that the deluge of these vehicles hurt new-vehicle sales.

Program vehicles now average six months or 12,000 miles in service. In April, for example, some GM program vehicles crossed the auction block with as few as 6,000 miles on them while others had 17,000 miles.

By keeping vehicles in rental fleets for a longer period of time, so that each vehicle accumulates higher miles before going through the auctions, automakers are providing a greater distinction between new vehicles and used vehicles.

Dealers and consumers think of program cars with 10,000 miles or less on their odometers as "nearly new." These vehicles are substantially less expensive than new vehicles and have the remaining portion of a new-vehicle warranty.

Executives from the Big 3 explained their plans last month at the National Auto Auction Association convention.

"The attempt to extend the average term of those vehicles in service and to somehow extend the average miles to a higher level will make them look less like a new car and more like a used vehicle," said Tom Cunningham, manager of vehicle remarketing for Ford Motor Credit Co.

Mike McHale, manager of GM's auction department, said, "It is in the manufacturers' best interest to make a clearer distinction between new and nearly new vehicles," he said.

N.A. Malenfant, used vehicles sales and marketing manager for Chrysler, was more to the point. "Chrysler doesn't sell nearly new cars," he said.

GM remarketed about 500,000 program vehicles to its dealers in the January through September period.

"Program cars don't appear to be a flash in the pan," said McHale. "In 1990 we sold 478,000 program cars through auctions, and we have already sold more than that this year. We are declaring it a big year."

Chrysler remarketed more than 200,000 units through September, which is equal to the number the company sold in 1990, according to Malenfant.

"We are looking forward to a strong fourth quarter and a good 1992," he said. "We expect to have enough vehicles next year to satisfy the needs of our dealers."

Cunningham said Ford will sell a higher number of cars to its dealers through the auction system in 1992 than this year. For the January through September period, Ford sold about 300,000 program vehicles, he said.

Ford and GM will continue their daily rental fleet programs, which include an offer to repurchase 100 percent of the rental vehicles.

Chrysler has a different program. Instead of repurchasing the vehicles, Chrysler offers a guaranteed residual value on 75 percent of the cars sold to daily rental companies.

The daily rental companies remarket the vehicles through the auctions themselves.

SURVEY

Most dealers rely on program cars

continued from PAGE 1

they don't.

"Dealers feel program cars are dynamite and will help them survive these tough times," said George Parker, the instructor at the academy who was responsible for the survey.

Manufacturers sell program cars to daily rental companies, buy them back at a pre-agreed price, then remarket them to dealers through auto auctions.

Rancor by some dealers centers on the rising tide of program vehicles — about 1.5 million this year — and their tendency to substitute for new-car sales. Dealers also fear manufacturers have created a secondary distribution network for program cars.

Of the dealers surveyed, 68 percent believe automakers should continue program vehicles and 25 percent said they should be discontinued. The remainder were unsure.

Dealers adamantly opposed manufacturers allocating program units. Of dealers surveyed, 61 percent said manufacturers should not allocate program cars and 21 percent approved of the practice.

"The high percentage of dealers saying they would approve of an allocation method reflects the perception by dealers that they are paying too much for program cars at auction and they they might be able to get them cheaper on an allocation basis from the manufacturer," said Parker.

Direct distribution of program cars by manufacturers apparently gives most dealers the shivers. The Big 3 domestic automakers are looking for ways to bypass the auction process. GM and Chrysler are experimenting in Florida with selling vehicles directly to dealers.

Dealers made an average gross profit of $1,155 on program cars compared to $1,086 on a trade-in and $1,137 on a repossessed vehicle purchased at auction. The average gross on a new car is $1,150.

Though grosses for a new car and program car are almost the same, as a percent of the selling price, the gross on program cars is much higher than on new cars.

Dealers also make an average of $576 in the finance and insurance department on program cars compared to $270 on new cars. These add-ons include extended service contracts, credit life insurance and financing charges.

NADA formed the task force in June to examine the growth and distribution of program cars. The task force is expected to make recommendations to the NADA board of directors meeting later this month.

Parker said the survey is not connected to the task force. Strauss said he has not seen Parker's study.

The survey was conducted in three parts among representatives from 250 dealerships attending the last nine classes at the NADA Dealer Candidate Academy.

NADA Dealer Academy is a training institute for dealership personnel, including dealer sons and daughters and managers.

briefs

Ford transmission lawsuit ends

WASHINGTON — A 10-year suit involving 16 million 1972-1979 Ford Motor Co. cars and light trucks with automatic transmissions has ended on a technicality.

The transmissions allegedly were prone to slip unexpectedly from "park" to "reverse."

The federal Court of Appeals for the District of Columbia refused to rule on class-action certification because the only plaintiff named in the appeal, John F. Walsh, had settled with Ford Motor Co. for $25,000 in a Missouri court.

Walsh had released Ford from claims.

Beverly C. Moore Jr., attorney for the plaintiffs, vowed to continue the fight with similar pending cases.

A National Highway Traffic Safety Administration investigation into the matter ended by negotiation 11 years ago.

The government agreed to drop the case, and Ford agreed to send instrument-panel stickers to owners of the cars, warning drivers to put the gearshift lever firmly into "park," turn off the engine and set the parking brake before exiting the vehicle.

Koreans report strong first half

SEOUL — Buoyed by steady growth in domestic demand and a push into new export markets, South Korean automakers last week reported strong gains in sales for the first half of the year.

- Hyundai Motor Co., the industry's biggest producer, said net income rose 83.1 percent from a year earlier, to 39.5 billion won (about $54.5 million), on a 36.8 percent rise in revenue, to 2.7 trillion won ($3.7 billion).
- Kia Motors Corp., the second-largest producer, said earnings dropped 66 percent, to the equivalent of $7.7 million, despite a 12 percent sales rise to $1.8 billion.
- Sales at Asia Motors Co., a unit of Kia Motors, rose 16.1 percent, to $606.1 million. Profit for the commercial-vehicle maker edged up 9.1 percent, to $3.9 million.
- Ssangyong Motor Co., which only produces trucks, said sales edged up 8.7 percent, to $255 million, and profit soared 74.9 percent, to $6.48 million.

Most Cadillacs under one roof

DETROIT — Cadillac will build all its models except the Brougham at one plant in the 1994 model year, when production of the DeVille and Fleetwood is moved from Lake Orion, Mich., to the Detroit-Hamtramck plant.

Last week's announcement had been expected.

General Motors' Buick-Oldsmobile-Cadillac Group, which operates the Lake Orion plant, said production of the Oldsmobile Ninety Eight will remain at Lake Orion, and it will build the new G-car platform, which debuts in the 1994 model year and will yield the Oldsmobile Toronado and Buick Riviera.

The Cadillac-operated Hamtramck plant will cease its production of the Toronado and Riviera, currently built on the E-platform, after the 1993 model year.

Cadillac Brougham will continue to be assembled at the Arlington, Texas, plant.

U.S. group fights Nissan tax break

continued from PAGE 3

only a portion of the equation for domestic content and apply it to us and say we're not meeting our objectives," said Kahl. "Our purchases of foreign materials have decreased and will continue to decrease."

Nissan estimates that under EPA criteria, its 1992 Sentra has 74.6 percent "domestic content, up from 63 percent in 1989. The Smyrna-built pickup truck is currently about 57 percent domestic, Nissan says. The Smyrna plant will begin building a Stanza next year that Nissan says will also be close to 75 percent domestic.

The Automotive Parts and Accessories Association has opposed other applications in the past and has lobbied for tighter trade-zone rules. It recommended that any expansion for Nissan be limited to vehicles that are exported. Nissan has never exported more than a few hundred vehicles a year from Smyrna.

Nissan did not specify how much it would save with an expanded trade zone. But based on figures cited in other trade-zone applications, tariff savings could be $6 million to $10 million a year.

Audi 100 ads cite German reviews

Audi of America is rolling out its redesigned 1992 100 with an ad campaign built around testimonials from German car enthusiast publications.

The car was introduced in Europe last year and went on sale in the United States on Oct. 1.

The ads focus on three German automotive journals, *Auto Motor Und Sport, Auto Bild* and *Mot*, that rated the 100 ahead of the Mercedes 300E 2.6 and BMW 525i in terms of styling, handling, control and economy. The campaign broke Sept. 30 with a print ad in *Automotive News*.

TV and radio spots debut today.

Dealer rebates bloom on 1992 models

ARLENA SAWYERS
Staff Reporter

Several General Motors divisions, Jeep-Eagle and Volkswagen United States upped the incentive ante for dealers.

Chevrolet is paying its dealers $2,000 on the 1991 Corvette, $3,000 on the 1991 Corvette ZR-1, $1,000 on the 1992 Corvette and $2,000 on the 1992 Corvette ZR-1.

Also, Chevrolet dealers earn rebates of $300 to $750 on 1991-92 Camaros and $200 to $500 on 1991-92 Caprices, based on performance against quota. Chevrolet's program expires Feb. 4.

Members of the American Quarter Horse Association and the National Cattleman's Association who received coupons worth $500 off the price of any **GMC Truck** may instead use the coupon toward the purchase of any Chevrolet truck.

Through Feb. 4, **Pontiac** is paying dealers $300 on sales of 1992 Sunbirds.

In addition to its previously announced customer rebate program, **Buick** is circulating coupons good for cash discounts. Owners of 1990 and older Buicks received coupons good for $500 off the price of a 1992 LeSabre. Consumers aged 50 and older can use a coupon in the October/November issue of *Modern Maturity* worth $400 on any new Buick.

Consumers who test drive a 1992 Delta Eighty Eight will receive a $50 savings bond from **Oldsmobile,** dealers said.

Jeep-Eagle is paying a dealer incentive of $1,000 on the 1991 and 1992 Jeep Cherokee Laredo and $750 on the 1991 and 1992 base Eagle Talon through Dec. 31.

Volkswagen United States is paying dealer rebates of $500 on sales of 1991 Jetta, 1991 Fox and 1991 Golf models and $1,500 on the 1991 Passat. The program runs indefinitely.

INCENTIVE WATCH — DEALER INCENTIVES

NEW PROGRAMS

GENERAL MOTORS (expires Feb. 4)

Chevrolet Caprice (1992)	$250-800, quota
Camaro (1992)	$300-750, quota
Corvette ZR-1 (1992)	$2,000
Other Corvette (1992)	$1,000
Corvette ZR-1 (1991)	$3,000
Other Corvette (1991)	$2,000
Pontiac Sunbird	$300

CHRYSLER CORP. (expires Dec. 31)

Eagle Talon (base, 1991-92)	$750
Jeep Cherokee Laredo (1991-92)	$1,000

VOLKSWAGEN (1991 models, no expiration date)

Passat	$1,500
Jetta, Fox, Golf	$500

CONTINUING PROGRAMS

ALFA ROMEO (expires Dec. 31)

164, 164L automatic (1991)	Up to $200 per car monthly in floorplan aid

GENERAL MOTORS

Cadillac Allante (1991) (no expiration date)	$7,500 on first sale, $8,500 on additional sales

ISUZU (1991-92 models, unless otherwise noted; expires Dec. 31)

Cars*	$800-1,800
All pickups*	$1,000-1,500
4x4 pickups (bonus, 1990-91)	$500
Trooper*	$1,500-1,800
Rodeo*	$00-500

*Based on number sold

LOTUS (1991, no expiration date)

Elan	$5,000
Esprit Turbo	$11,000-15,000

MAZDA (1991 models; expires Nov. 4)

929	$2,000
323 (low-volume dealers)	Up to $500

MERCEDES-BENZ (1991 models, no expiration date listed)

300SE, 300SD, 300SDL, 300SEL	$3,000
420SEL, 560SEL	$5,000

MITSUBISHI (1990-91 models; rebates and terms vary by regions; programs expire Oct. 31)

Mirage	$250-1,500
Eclipse	$300-1,200
Galant	$300-2,100
Montero	$400-3,000
Pickups	$400-2,300

NISSAN (1991 models; expires Feb. 2, 1992)

300ZX	$2,500-3,500, quota

PEUGEOT (no expiration date)

405	$5,000
505	$6,000

SUBARU (1991 models; expires Nov. 4)

Legacy	$100-1,600, based on number sold

STERLING (no expiration date)

All models	$8,000*

*Or $3,000 if customer chooses 0 percent financing

TOYOTA (expires Nov. 4)

Corolla (1990-92)	$200-900, quota
Camry (1990-91)	$200-900, quota
Pickups	$200-1,300, quota

VOLKSWAGEN

All cars (1990, no expiration date)	$500-1,500

VOLVO (1991 models; expires Oct. 31)

740 series	$750-1,500
940 series	$1,500-2,500
780 coupe	$2,500

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.
All programs expire Dec. 31. Finance rates in lieu of rebates start at 6.9 percent on minivans, 4.9 percent on other models.

Loyale 4wd (1991)	$500
Legacy (1991)	$1,200
XT, XT6 (1991)	$2,000

CONGRESS

Cunningham, Recchia on agenda

continued from PAGE 3

ing for Chrysler Canada in 1986.

In August 1987, he returned to the United States as executive director of Dodge car and truck marketing and one month later was elected a vice president of Chrysler Corp.

He was named vice president of Service and Parts Operations in January 1988.

Cunningham has a bachelor's degree in business administration from Southern Illinois University in Carbondale, Ill., and took part in Harvard University's advanced management program.

Mitsubishi's Recchia also is a veteran of the Chrysler sales staff. He was with Chrysler for 15 years and was general sales manager of the Automotive Sales Group when he left in 1978 to become president of Fiat Motors of North America.

He has been with Mitsubishi Motor Sales of America since it began operations in 1982.

Before being appointed to his present position in December 1981, Recchia was a special marketing and management consultant for Mitsubishi Motors Corp.

Recchia had previous experience with Mitsubishi products at Chrysler, which was the sole importer of Mitsubishi vehicles until 1981.

As chief operating officer of Mitsubishi Motor Sales of America, Recchia also is a director and a member of the company's executive committee.

Recchia received a bachelor's degree from the University of Detroit and a master of business administration degree from Wayne State University in Detroit.

For further information, write Wendy Barhydt, Automotive News World Congress, UMTRI/OSAT, 2901 Baxter Road, Ann Arbor, MI 48108-2150.

The telephone number is 313-764-5592.

ESCORT

$500 rebate bolsters profit for dealers

continued from PAGE 1

being tested in the West, Southeast and Northeast, but dealers do not have to participate.

Most Ford dealers say they like the program, and Roberts said the overwhelming majority have purchased the one-price cars.

Ralph Wheeler, general manager at Jim Babbitt Ford in Flagstaff, Ariz., said he has ordered 25 Escorts compared to his usual 10. "We will all make more money by having this concept in place," Wheeler said. "We will take the confusion out of buying and give the customer good value."

All automatic transmission LX models also have one price: $10,499. Roberts said Ford will not advertise the automatic transmission models and will not offer cash rebates on those models.

Bus Goode, owner of Goode Motor Inc. in Rupert, Idaho, said that even if margins are lower for the automatic models, the expected extra volume will bring in more money on the back end. "F&I and service contracts will increase," Goode said.

A sample sticker sent to Ford dealers showed that a $12,082 five-door LX automatic would have an option-package discount of $852 and a dealer-margin reduction of $731 to reach the $10,499 price.

Roberts said the one-price program was tried in Europe and sales of Escorts more than doubled.

"This is a narrowly focused program aimed at the young professional," he said.

Roberts said he does not know if the program will be expanded to other parts of the country or to other vehicle lines.

ISUZU

Name, not models, may leave Europe

continued from PAGE 4

Isuzu's European offerings include the forthcoming Opel/Vauxhall Frontera, which is based on the Isuzu Rodeo/Amigo, the Trooper, and light trucks.

Despite the company's denials, some observers consider Isuzu's pullout from the passenger-car business to be inevitable.

"It is a logical question," said analyst Neal Doying of Baring Securities (Japan) Ltd.

"From a profit standpoint it is a loss-making operation for them. It is detracting from the bottom line," he said.

Isuzu launched a restructuring plan last summer after reporting an operating loss of 16.8 billion yen ($129 million) for the six-month period ended April 30. It blamed the deficit on a sharp drop in U.S. and Japanese demand, exchange-rate losses and the costs of readying new products.

The restructuring calls for closer cooperation with General Motors, as well as a boost in production from 5,000 to 7,000 units monthly at its U.S. transplant joint venture, Subaru-Isuzu Automotive Inc. in Lafayette, Ind.

The Japanese company is expected to announce its new plans, including greater GM participation, after the financial statement for the full fiscal year is released in mid-November.

Isuzu says it expects sales in the current fiscal year ending Oct. 31 to slip to 510,000 units from 574,000 last year.

Ford expects loss in 3rd, 4th quarters

CHARLES M. THOMAS
Staff Reporter

Ford Motor Co. expects to report continued heavy losses in the third and fourth quarters of this year.

The prediction came in Ford's registration filed with the U.S. Securities and Exchange Commission for an issue of $750 million of convertible preferred stock.

The company blamed competition and industrywide overcapacity for the anticipated loss. The third-quarter loss will probably exceed Ford's $324 million second-quarter loss, the prospectus said.

Raising $750 million in a stock offering will help the automaker stabilize its debt-to-capital ratio, which has been rising for the last 18 months. The debt-to-capital ratio stood at 39 percent as of June 30, increasing from 32 percent at year's end.

The cash generated from the stock offering also will help pay for Ford's expensive capital spending program, which is pegged at more than $26 billion through 1995.

"Ford can either borrow more money or raise it through a stock issue," said Jean Claude Gruet, analyst with New York-based UBS Securities. "The decision to raise money through a stock issue must have sounded good because it isn't as expensive as debt."

The preferred stock eventually will be converted to common stock at a rate and time to be determined.

Chrysler sells extra shares

Defying skeptics and critics, Chrysler Corp. last week succeeded in selling 15 percent more of its new stock than anticipated. It raised about $395 million for its anemic cash reserves after paying underwriting fees.

The company augmented an initial offering of 35 million common shares by selling an additional 5.25 million shares. Chrysler priced the new stock to the wholesale underwriters at $10.125 per share. The new shares join in the marketplace the 224.4 million Chrysler common shares outstanding before the offering.

Chrysler also put 27 million new shares worth an estimated $300 million into its underfunded pension plan.

The new stock dilutes previously outstanding shares, but Chrysler has said it needs to fortify its balance sheet and avoid a further downgrading of its credit rating, which now stands at junk-bond status.

— *Mary Connelly*

NHTSA fills No. 2 position

WASHINGTON — Frederick H. Grubbe, 30, has been appointed deputy administrator of the National Highway Traffic Safety Administration.

Grubbe has been acting deputy administrator since early this year. Before that he was special assistant to Transportation Secretary Samuel K. Skinner responsible for personnel appointments and organization management.

He replaces Jeffrey Miller, who resigned the agency's No. 2 position last winter.

*Estimate †1990 totals reflect LeSabre (rwd) ††1990 totals reflect Olds. 88 (rwd)

*CAMI includes Geo Metro and Suzuki Swift cars and Geo Tracker and Suzuki Sidekick trucks; Diamond-Star includes Eagle Summit and Talon, Mitsubishi Eclipse and Mirage and Plymouth Laser; Mazda includes MX-6, 626 and Ford Probe.

**Estimates for Mack, Volvo-White, Kenworth, Peterbilt, Freightliner, Mercedes-Benz.

May contain error of one or two units due to rounding.

Output in Sept. tops '90

ROBIN-LYN RAIMEY
Special Correspondent

Total September vehicle production in the United States and Canada edged ahead of the total for September 1990 — the first time this year that monthly output has surpassed the corresponding month last year.

September's total of 995,128 was 1,272 units above the September figure in 1990.

Truck production made the difference. September U.S. truck output of 335,996 was up 4.7 percent, and Canadian truck output of 77,982 was up 32.1 percent.

Canadian car production in September was the highest since 1969. Output of 100,646 cars last month was 23.0 percent more than September 1990 output.

On the U.S. side of the border, it was a different story. September car production of 480,534 was the lowest total for the month since 1982 and was off 9.7 percent from September 1990.

Total car and truck production in Canada and the United States last week was 246,152, up 0.3 percent from the previous week and down 6.1 percent from the 1990 week.

Third-quarter vehicle production of 2,538,422, was off 14.6 percent from the second-quarter and down 6.7 percent from third-quarter production last year.

General Motors' Buick-Oldsmobile-Cadillac Group scheduled two overtime shifts last Saturday at the Lordstown, Ohio, car and truck plants and the Wilmington, Del., car plant. Lordstown makes the Pontiac Sunbird, Chevrolet Cavalier and Chevrolet and GMC full-sized vans, and Wilmington makes the Corsica and Beretta.

The Chevrolet-Pontiac-Canada Group scheduled one shift of Saturday overtime at Tarrytown, N.Y., source of the Chevrolet Lumina APV, Oldsmobile Silhouette and Pontiac Trans Sport.

GMC Truck Division scheduled two Saturday shifts at the Shreveport, La., truck plant, which makes the GMC Sonoma, and S15 Jimmy and the Chevrolet S10 pickup and Blazer; and one shift at the Moraine, Ohio, truck plant for the postal line.

GM of Canada scheduled one shift of Saturday overtime for all plants.

Ford Motor Co. worked daily overtime at the truck plants in Kansas City, Mo., Lorain, Ohio, and Louisville, Ky. Kansas City makes Ford's F-series pickups; Lorain produces the Econoline and Club Wagon, and Louisville produces the Explorer, Ranger and Mazda Navajo.

Chrysler Corp. scheduled daily overtime and two Saturday overtime shifts at the Dodge City Plant in Warren, Mich, which produces the Dodge Dakota and full-sized pickups.

All Canadian car and truck plants will be closed today in observance of the Canadian Thanksgiving holiday.

CAFE of 37.1 called possible

WASHINGTON — A corporate average fuel economy standard of 35.5 mpg could be achieved by the 2001 model year without any breakthroughs in technology, the Office of Technology Assessment has concluded.

The group said CAFE could rise to 37.1 mpg by 2005 without major disruptions in the auto industry. The current standard is 27.5 mpg.

Congress' research arm said a 29-mpg CAFE is about all that can be expected by 1996, because work on 1996 models has already begun. The study was hailed by Sen. Bennett Johnston, D-La., who said the numbers are very close to those he expects to introduce soon into the Senate's CAFE debate.

The Big 3 attacked the study, saying the CAFE numbers would "assure major disruptions to the industry, decreased employment for the domestic automakers and require major changes to the types of vehicles available to consumers."

Kia plans U.S. dealer network, 2 new models

OLES GADACZ
Staff Correspondent

SEOUL — Kia Motors Corp., the Ford Motor Co. affiliate that is South Korea's second largest automaker, confirmed last week that it will enter the U.S. market in 1993-94 with two new models and its own independent dealer network.

Kia Chairman Kim Sun-Hong disclosed in an interview Friday that the company's two new models were designed from the ground up for the U.S. market, and that it is actively searching for Americans to fill the top two management spots in a company yet to be set up.

"The vehicle designs were developed especially for the tastes

Isuzu calls on GM for help

Japanese maker expects $377 million loss for '91

MARY ANN MASKERY
Staff Reporter

TOKYO — General Motors in coming weeks will step in and take an active management role in Isuzu Motors Ltd., the troubled Japanese vehicle maker expected to report a loss of some 49 billion yen (about $377 million) for the fiscal year ending Oct. 31.

According to a senior Isuzu official close to the negotiations, GM and Isuzu executives have been discussing ways for the U.S. automaker to help its Japanese affiliate back to profitability.

According to the insider, GM's contributions could include broad marketing and distribution assistance, as well as taking an unspecified "active" management role.

But the official, who declined to be identified, scotched rumors that GM would raise its stake in Isuzu to a controlling 51 percent from 37.4 percent now.

GM is already an active partner in Isuzu, and it was not immediately clear how its role could be sharpened without taking over management. Isuzu builds the Geo Storm for sale by GM in the United States, and markets Opels in Japan.

In Europe, the two companies co-produce vehicles in Britain, and Isuzus are sold almost exclusively by GM dealers.

Amid slumping sales in its export and home markets, Isuzu last week raised its earlier forecasted loss for the fiscal year from $270 million to $377 million. The company, which earned 15.4 billion yen in the fiscal year ended Oct. 31, 1990, said it now expects to lose as much as 30 billion yen in the just beginning year as well.

GM's game plan for Isuzu is based on the understanding that the company has solid resources and that its losses are a management problem, the source said.

Honda rarely shows concept cars, but this year has the FS-X, an environment-friendly, 4wd luxury sedan.

Spotlight turns to Tokyo

Automakers stress safety, social responsibility at show

RICHARD JOHNSON
Staff Reporter

TOKYO — The biennial Tokyo motor show that opens Wednesday promises to shape up much like the last two — a concept-car extravaganza overshadowing the rival Frankfurt show that precedes it by only a few weeks.

It has been a familiar script. In both 1987 and 1989, the German manufacturers at Frankfurt were long on tradition and short on dazzling new product — at least product they were willing to display. Then the Japanese took the stage with a spectacle that induced every reaction but boredom.

Not surprisingly, the Japanese this year will use their Makuhari Convention Center forum to demonstrate how they'll respond to environmental, safety and legislative demands of the new decade. The official theme is "Discovering New Relationships — Man, Car and the Earth as One."

In a sharp pullback from the 1989 credo of muscle for muscle's sake, Japanese carmakers are emphasizing social responsibility and are showing high-tech machines that very consciously attempt to cater to human beings.

Honda, for example, has scrupulously avoided 8-, 10- or 12-cylinder powerplants for its upscale sport sedan prototype, the FS-X. Similarly, Toyota and Nissan are believed to have dropped plans to display V-12s at the show. Only Isuzu will go against the grain this year with a V-12 "grand sports-utility vehicle."

Nissan's "Feel The Beat" promotional theme in Japan will be replaced by "Life Together Nissan" after the motor show. Mazda's show theme is "Friendly To People, Kind To The Environment." And Mitsubishi has chimed in with "Human Scale Technology."

Toyota Motor Corp.'s holistic approach is embodied in the theme "What Is a Good Car?" The lightweight, aerodynamic AXV-III that will be shown here is powered by a 24-valve experimental lean-burn V-6 and is being promoted as Toyota's "gentler" sedan, meant to be "gentler on people, society and the environment."

Its active safety systems include a cruise-control function that senses distances from other vehicles in congested and high-speed traffic. A voice responds when the car veers out of lane. It also offers a fully automatic system for "garaging" that takes over complete control of steering, brakes and transmission for automatic parking in tight spaces.

Polygonal body members improve energy absorption, and the car has air bags for both driver and passenger. Four-zone air conditioning adds to creature comfort, and a shift-by-wire electric automatic transmission makes driving easier.

The aerodynamic AXV-IV commuter car, powered by an 804cc two-stroke, is a shade under 134 inches long. But it attempts to reconcile a comfortable interior, aerodynamic exterior, lightweight body and good driving performance in a small package.

Toyota's Calty Design Research styling center in California penned the Avalon, a four-seat convert-

Some firms react to harassment

KATHY JACKSON and LIZ PINTO
Staff Reporters

From suggestive hoots and howls on the assembly line to demands for sex behind closed office doors, sexual harassment in the auto industry is the norm, not the exception, say women workers.

"I remember one boss walking up to a girl on the line saying, 'Why don't you just jump up here on the car and I'll eat you in front of God and everybody,' " asserts one female auto worker.

Every auto company operating in the United States has policies forbidding sexual harassment on the job. But in the wake of the intense national debate that swirled around Senate confirmation hearings for the Supreme Court appointment of Clarence Thomas, some companies will give

show a combined third-quarter loss of about $1.9 billion, auto analysts say.

A survey of Wall Street analysts shows that General Motors lost about $1.2 billion and Ford Motor Co. lost $478 million in the July-September period. Both companies are expected to issue their financial reports this week.

Chrysler Corp. will post a loss of about $191 million when it releases its results next week, analysts say.

The July-September period is typically weak, and this year it was made worse by recession. The third-quarter deficits will follow a combined Big 3 loss of $3.2 million during the first half. In the third quarter of 1990, when the current profit slide began, the Big 3 lost $2.1 billion.

— The Associated Press

GM denies job bias against black nurse

DETROIT — General Motors has been charged with discriminating against a black nurse by allegedly promoting less-qualified whites ahead of her, the Michigan civil rights department said last week.

GM spokesman John Maciarz said the company denied the allegation.

The department said Naomi Scott, a part-time industrial nurse in Detroit, was passed over for full-time employment at least twice in favor of white applicants.

The first instance occurred in October 1985, the civil rights agency alleged.

Public hearings have been scheduled for Nov. 4-5 in Detroit.

— The Associated Press

Ford says angry workers ransacked Mexico offices

MEXICO CITY — Ford Motor Co. says a group of disgruntled workers and labor representatives ransacked the lobby of its Mexican subsidiary headquarters in Mexico City earlier this month.

The incident is the latest in a two-year quarrel between Ford and some dissident employees there. A group broke into the building's lobby, damaging furniture, spray-painting walls and destroying artwork.

The company filed a complaint with local police, but no arrests have been made.

The dissidents have been at odds with Ford since losing a union election at the company's Cuautitlan, Mexico, plant two years ago.

GM names Haas to head quality and reliability

DETROIT — Ronald H. Haas has been named to succeed Edward P. Czapor as General Motors vice president in charge of quality and reliability. Czapor, 65, will retire Nov. 1 after 43 years with GM.

Haas, 54, has headed the current engineering and manufacturing staff since 1988. He has been a GM vice president since 1986, when he was placed in charge of the advanced engineering staff. He joined GM in 1966.

Czapor rose through GM's Delco divisions. He became a vice president in 1981 and has headed quality and reliability since 1985.

Iacocca to fade out of Chrysler advertising

AUBURN HILLS, Mich. — Chrysler Corp. Chairman Lee Iacocca will play a reduced role in the company's advertising as he heads toward retirement at the end of 1992.

"I intend to phase out," Iacocca said at a press briefing following the dedication of the new $1 billion Chrysler Technology Center last week. "There was a time to do it. I don't think it's needed anymore."

Iacocca's ability to convince people to buy Chrysler products as the company struggled back from bankruptcy in the early 1980s is considered a key factor in Chrysler's famed turn-around.

British Ford isn't buying union bid for 7% raise

LONDON — Blue-collar Ford of Britain workers are demanding a 7 percent pay hike as negotiations for a new two-year contract begin.

There is the usual disparity of view.

Ford says:

- Inflation is only 4.1 percent.
- Sales are down 100,000 units.
- Ford's British unit lost almost $500 million last year.
- "We are probably under the worst pressure ever, with an unprecedented decline in the U.K., the U.S. and the rest of the world all happening at the same time," said personnel director John Hougham.

The Transport and General Workers' Union says:

- Rover and Peugeot Talbot are about to give workers a 7.5 percent raise.
- "Ford's position as a market leader means the company is well-placed to benefit from an upturn in the market," said chief union negotiator Jack Adams.

— Vaughn Freeman

GM to spend $44 million to upgrade emission labs

MILFORD, Mich. — General Motors will spend $44 million to expand and upgrade its emissions labs here in order to conduct rigorous cold-start and hot-temperature evaporative emissions tests required by the Environmental Protection Agency and the California Air Resources Board.

Another lab upgrade will allow the company to recognize in emissions a hydrocarbon compound's propensity to facilitate the formation of ozone.

The expansion began this summer and should be completed by mid-1993.

briefly

'Luxury' is not rich enough

Erich Krampe, president and chief executive officer of **Mercedes-Benz of North America,** told the International Motor Press Association last week that "luxury" is getting to be a meaningless term, being applied to cars that range in price from $13,000 to ten times that much. He said Mercedes' new S-class cars, which start at $69,400, belong to a new "premium" luxury market, where entries are priced above $65,000 and are set apart by image, high-tech features and "super-duper" customer service. Besides other cars, the competition in that bracket includes "a vacation home or a yacht."

ROCK-SOLID SUPPORT — Chairman Lee Iacocca bristles at the notion that **Chrysler** is living beyond its means at the architecturally striking $1 billion Chrysler Technology Center, dedicated in Auburn Hills, Mich., last week. (Story on Page 4.) "It's perception again," Iacocca lamented in an interview. "I have kiddingly said that the granite is so good looking that I wish I had stuccoed it. But it's got to last 100 years."

POLITE TO A POLITICIAN — In the end, good manners won out. Michigan Gov. John Engler was a speaker and featured guest as Lee Iacocca hosted more than 1,000 guests at the formal dedication of the **Chrysler** Technology Center last week. But just days prior to the dedication, Engler vetoed $1.6 million in state money that had been targeted for site development at the center and at Chrysler's new Jefferson North assembly plant in Detroit. "We got dunned for $1.6 million. But I didn't think today was the day to bring it up," Iacocca said when asked if he had complained to Engler.

Iacocca: timing wasn't right

DUELLING LOGOS — **Mazda** announced its **Amati** luxury division channel in August but did not unveil a logo. The reason? A non-profit organization in Canada, which Amati won't name, uses a symbol "vaguely similar" to the one Amati wants to use in both Canada and the United States. Amati approached the group and expects to negotiate a settlement soon.

MADE A MILLION, EH? — The **General Motors** Oshawa, Ontario, truck plant built its 1 millionth C/K pickup last week. Production of the redesigned C/K series began in early 1987. The milestone unit was a two-tone gray GMC half-ton pickup.

THEY'RE OF TWO MINDS — **Mitsubishi** calls it the Expo LRV. **Chrysler** calls it the **Eagle** Summit wagon. But these identical twins prompt different reactions from the folks in Highland Park, Mich. Chrysler looks askance at the Mitsubishi Expo LRV and says it is a minivan that's being dumped in the United States in a Big 3 complaint pending before the U.S. Commerce Department. But when the wagon wears the Eagle Summit badge, Chrysler thinks it is a car. And a good car at that. Chrysler has entered it in the Motor Trend Import Car of the Year competition.

Oct. 1-10 sales decline 7%

Ford, Chevy truck sales tumble

JIM HENRY
Staff Reporter

Toyota and Honda fared well in sales in an otherwise lackluster early October.

Overall sales fell 7.0 percent, to 304,109, in the first sales period of the 1992 model year. Cars and light trucks were off by about the same percentage.

Sales declined for each of the U.S. Big 3. General Motors was off 16.9 percent; Ford Motor Co. fell 8.4 percent, and Chrysler Corp. dipped an estimated 12.5 percent.

Some of the decline appeared to stem from a late-September race between Ford and Chevrolet for the 1991 model year's full-sized pickup crown, which Ford won.

"There was such a fever to win at both organizations that dealers were trying to do any kind of deal they could," said Ford Motor Co. sales analyst Joel Pitcoff. "I would expect payback for most of the month."

Sales of full-sized pickups fell 30 percent for Ford and 11 percent for Chevrolet, Pitcoff said. Conversely, GMC was down only 3 percent in that category, and Dodge was up 12 percent, he said.

Pitcoff said the fact that early October was the first sales period of the new model year probably isn't all that significant because there are still a lot of 1991 models around and buyers aren't necessarily aware of what's new for 1992.

New models helped sales at Toyota Motor Sales U.S.A. Inc., which posted an increase of 39.1 percent over last year. The company reported across-the-board hikes in imports and domestics, cars and trucks.

Toyota said sales of the new Lexus ES300 were more than double those of the the model it replaced, the ES250. Sales of the restyled Toyota Camry were up 16.4 percent.

Sales for American Honda Motor Co. Inc. shot up 29.1 percent. Deliveries at Honda Division rose 30.8 percent, and Acura was up 19.9 percent.

Sales rose 0.6 percent for Nissan Motor Corp. in U.S.A. A gain by Infiniti offset a slight decline in Nissan brand volume.

In addition to Chrysler's sales, *Automotive News* estimates 10-day sales for most imports.

Used-car buyers not brand loyal

Average dealer sells 40 units a month

CHARLES M. THOMAS
Staff Reporter

Nameplates mean a lot less in the used-car market than they do in the new-car market. That's because a customer's perception of model quality and desirability blurs when it comes to comparing and buying used cars.

"Used cars are sold on their own merits without a lot of brand loyalty," said George Parker, an instructor at the National Automobile Dealers Association Dealer Candidate Academy.

Parker, who studies used-vehicle trends at new-car dealerships, said the average franchised dealer has 78 used cars in stock and sells 38 to 40 used units every month. Of those vehicles, 58 percent are domestic brands, and 42 percent are imports.

Thirty-six percent of the vehicles have been in a dealer's inventory more than 30 days, said Parker, who spoke last month at the National Auto Auction Association convention.

He said dealers should get rid of cars not sold after 30 days either by wholesaling them to auto auctions or selling to wholesalers.

According to Parker, 65 percent of franchised dealers attend auto auctions every week; 22 percent attend monthly; 11 percent attend quarterly, and 2 percent attend annually.

Only 3 percent of franchised dealers use auctions exclusively to wholesale their trade-ins. Fifty-three percent of dealers prefer wholesalers because they are more convenient.

According to the survey, 44 percent of the dealers use auctions and wholesalers to buy and sell cars.

And 76 percent of dealers attend auto auctions to buy program vehicles. "The key is to get the dealer to buy from the consignment or fleet-lease lanes," said Parker.

He said 27 percent of dealers surveyed will buy from repossession and fleet-lease lanes. That is an increase of 10 percentage points over two years ago.

Sixty-seven percent of the vehicles taken in trade in a dealership are retailed, and 33 percent are wholesaled.

"That means wholesale is a big part of a dealer's operation, whether the vehicles are being taken to the auction or sold to wholesalers," said Parker.

According to the study, one of every three used vehicles that a dealer sells comes from an auction. Trade-ins on new cars account for 33 percent; trade-ins on used cars account for 14 percent; program cars account for 14 percent, and street purchases account for 7 percent.

"Dealers are making $1,169 gross on a vehicle purchased at auction compared to $1,086 on a trade-in for a new car," said Parker. "They are making more money on cars from auctions than on the ones they are trading for at their front door."

Preparing vehicles for sale can be expensive. Dealers pay more to prepare wholesalers' vehicles for resale than vehicles from other sources. Program vehicles cost the least.

Reconditioning costs average $162 for factory program cars, $235 for new-car trade-ins, $288 for used-car trade-ins, $293 for auction cars from dealer consignment lanes, $303 for street purchases, $308 for dealership-owned cars and $310 for cars purchased from wholesalers.

Parker also analyzes which model years sell quickest in the used-car market. Current models account for 14 percent of sales, and year-old vehicles account for 17 percent of sales. Thus, 31 percent of the used cars sold by new-car dealers are current model year or a year old.

Vehicles more than five years old account for 22 percent of sales, and vehicles six years or older represent 20 percent of sales.

Dealers' average gross on a current model year used car is $1,139; gross on a one-year-old vehicle is $1,236, and on vehicles more than six years old it's $945.

"Program units and late models are a big part of dealer income," said Parker.

According to the study, a vehicle that stays in inventory 10 days brings an average gross of $1,279; the second 10 days will average $1,297; 30 days, $1,237; 45 days, $1,201; 60 days, $1,025, and 90 days, $1,051. Profits on vehicles held in inventory more than 90 days dip to $636.

"Aging is a real killer," said Parker.

The survey was conducted in three parts among representatives from 250 dealerships attending the last nine classes at the NADA Dealer Candidate Academy.

JOE WILSSENS/AUTOMOTIVE NEWS

Dealers are making an average gross of $1,169 on vehicles bought at auctions, says NADA instructor George Parker.

PROFITS ON USED CARS, BY SOURCE

Gross profit on used-car sales by franchised auto dealers varies according to the source of the used car.

Source	Gross profit
Bought on the street	$1,288
Wholesaler	$1,243
Auction, fleet-lease	$1,169
Auction, program	$1,155
Dealership-owned	$1,137
New-car sale trade-in	$1,086
Used-car sale trade-in	$1,035

Fiat budgets $200 million in bid to boost Britain sales

VAUGHN FREEMAN
Special Correspondent

LONDON — The Fiat Group of Italy, whose home-market sales have been badly eroded by arch-rival Ford of Europe, said last week it will spend nearly $200 million over the next three years to boost sales in Britain — Ford's home turf.

Fiat said it will spend the money to upgrade dealers, to promote products and to build 20 new company-owned dealerships in key city centers. The automaker, which markets the Fiat, Lancia and Alfa Romeo marques in the United Kingdom, has about 300 dealers here.

"This represents a major commitment to the British market," said Mario Massaro, managing director of Fiat U.K. Ltd. "This investment will strengthen our dealership network."

Although Fiat is Europe's second biggest automaker after Volkswagen Group, it has not been a major player in Britain for many years. Its market share for the year through September fell to 2.2 percent from 2.9 percent for all of 1990.

Volume for the year has fallen 37 percent, to 34,487 units, while the British market is off 22 percent.

Analysts say Fiat's cash injection into its dealer activities is coming none too soon. In a recent survey by the Retail Motor Industry Federation, the trade group for British dealers, the Italian automaker was ranked last in terms of dealer satisfaction.

Fiat's share in Italy has ranged as high as 60 percent in recent years. In a major price-led push in the Italian market, however, Ford picked up 7 points of share there earlier this year, rising to 11 percent, while Fiat fell to 47.5 percent from 54 percent.

Decline in truck orders raises buyer credit issue

JOSEPH BOHN
Truck Editor

Medium- and heavy-truck sales continue to be disappointing, with little upturn in sight.

Analysts had anticipated net new heavy-truck orders of 8,000 to 8,500 for September.

Preliminary indications from Rothschild Inc., a New York investment firm, put them closer to 7,000. That is down from 7,776 orders in August and 9,127 in September 1990.

The trend reverses what had been a gradual strengthening during the past three months. Net new Class 8 orders had risen from 5,786 in June to 7,020 in July and 7,776 in August.

The latest figures, which presage future retail sales since it takes two to three months to fill them, point to a very disappointing 1991 total.

It now appears Class 8 retail sales will be near 100,000 for calendar 1991, down sharply from 121,226 last year, and the lowest in the past five years.

Frank Prezelski, an analyst with Rothschild, said that based on his conversations with captive finance subsidiaries of companies like PACCAR Inc. and Navistar International Corp., commercial truck buyers may be running into credit problems.

"Truck buyers appear to be having trouble getting financing," Prezelski said.

Prezelski said he attended a truck industry seminar and found it may not be so much the actual availability or cost of credit but all the caveats and restrictions being applied that are slowing truck purchases.

"There may be requirements for a higher down payment, more equity. Contracts may be tighter, so if a buyer misses a payment, his truck gets repossessed more quickly," said Prezelski.

But Richard G. Lanahan, executive vice president of Associates Commercial Corp. in Dallas, felt that the economy, rather than the banking community, was to blame.

"There's less demand for new trucks because there's less freight being hauled. A lot of equipment that would normally be replaced is parked in yards," Lanahan said.

He said there are probably some banks in certain markets that had withdrawn some funding for small and medium carriers — but not major ones.

Captive finance companies of major truck manufacturers and independents like Associates Commercial have readily stepped in to fill any lending void created by banks, Lanahan said.

"We've seen among our competitors there's a big appetite to provide financing (for truck purchases)," he added.

"We (Associates) probably picked up more traditional bank financing than ever," he said.

As an example, he said Associates' share of heavy-truck purchases and leasing business had increased from 8.75 percent in 1989 to 10.51 percent by August 1991.

During the same period, its share of trailer purchases and lease business had increased from 7.25 percent to 14.49 percent. And that was prior to the company's purchase of Fruehauf Corp.'s captive finance company in 1987, and Great Dane Corp.'s subsidiary in 1988.

Lanahan did note, though, that earlier in January and February, Associates had had more requests for ancillary financing than he'd ever seen.

This typically consisted of trucking companies asking if they could use the equity in their equipment as collateral to buy permits, license plates and insurance for their vehicles, after being turned down by banks.

Typically, such costs can average $2,000 a vehicle, Lanahan said, noting one company with 150 vehicles that needed $300,000 as a down payment on its insurance and to cover plates and permits.

To the extent that some trucking companies may have had to borrow money for such needs, it may have affected their ability to finance vehicle purchases, Lanahan said.

in brief

TRUCKS

Freightliner lands record order

PORTLAND, Ore. — Freightliner Corp. landed its largest-ever order for 1,000 Class 8 trucks from Werner Enterprises Inc. of Omaha, Neb.

Deliveries of the long-haul trucks will continue through next summer, according to Jim Hebe, Freightliner executive vice president.

New finance plan from Volvo GM

GREENSBORO, N.C. — Volvo GM Heavy Truck Corp. and General Motors Acceptance Corp. have introduced a non-recourse financing program, designed to increase financing flexibility, reduce contingent risk and provide more favorable terms on handling repossessions while increasing dealer profits.

Under the plan, dealers have no financial liability for new trucks repossessed from customers with excellent credit ratings other than safekeeping and remarketing of the vehicles for 90 days.

New trucks covered under the new program require a minimum down payment of 15 percent and a maximum financing period of 60 months, according to Edward Brown, Volvo GM director of dealer operations.

Allison plans rollout for new transmissions

JOSEPH BOHN
Truck Editor

General Motors' Allison Transmission Division in Indianapolis plans to introduce a new version of its six-speed, electronically controlled transmission every six months for the next several years.

The models have closed-loop and adaptive controls, meaning they continuously read temperature and operating conditions and adjust to them.

The division began producing the first of three truck versions of its new MD transmission in September, according to Al Huevel, world transmission marketing manager.

The transmission is designed for mid-range diesel-engine trucks, small Class 8s and other vehicles for applications such as pickup and delivery vehicles, utility and dump trucks, short-haul tractors, motor homes, fire trucks, school buses and refuse, recycling and beverage vehicles.

Allison also has a good shot at a new 11,000-unit military contract for tactical vehicles that will be announced soon, Huevel said.

In February 1993, an HD version of the world transmission will go into production for heavy-duty diesel engine Class 8 vehicles.

It will fit basically all the same vocational applications as the MD, but it will have enough power to handle engines up to 450 horsepower.

The AD version of the world transmission will go into production in April 1994. It will be for medium-duty gasoline and diesel engines up to 270 hp.

Typically, they are used in conventional Class 7 and 8 straight trucks and tractor trailers and also in GM's lighter P-chassis and other motor home chassis.

A family of bus transmissions, the B-300 and B-400, will go into production next September.

They are similar to the MD, but were modified extensively for the special needs of the bus market.

The B-500, a bus-market version of the HD transmission, will go into production in August 1993. The B-200, a bus version of the AD, will be built in October 1994.

Allison will continue to produce its AT 542 and 545 transmissions after new models go into production "as long as there is customer demand," said Don Brindle, world transmission manager.

Allison will use the AD model to bridge the price gap between the AT and the MD.

But Huevel said that initial studies by Allison showed the installed cost of the new transmissions to be equal to, or slightly less, than its current products.

He said that Allison's field tests also show they get about 9 percent better fuel economy than competitive manual transmissions.

Allison will unveil its new transmission to Europe at January's Geneva truck show and to Japan later in 1992.

More truck losses expected

Heavy-truck demand, currently projected at 100,000 sales for calendar 1991, is well below the break even point for manufacturers.

Frank Prezelski, an analyst with Rothschild Inc. in New York, looks for Navistar International to lose even more money in its fiscal fourth quarter than in the third quarter ended July 31, when it lost $31.0 million.

Navistar lost $98.0 million in the first nine months of fiscal 1991.

Mack Trucks Inc.'s $71.9 million loss for the six months ended June 30, as reported by *The London Times*, is a slight improvement over the $97 million it lost in like 1990.

PACCAR Inc. lost $29.3 million on its manufacturing operations for the first half ended June 30 and only managed an overall $19.1 million net profit, due to other activities.

Makers' Marks

Reaching the right prospects is more expensive, more difficult and more important than ever

By: Raymond Serafin

Three decades ago, Marshall McLuhan put forth the idea that "the medium is the message." You could argue that he was simply anticipating the auto marketing landscape of the 1990s.

The proliferation of car and light-truck brands during the last decade coincided with a rapid fragmentation of available media, brought on largely by the end of TV network dominance.

The result: It's more important than ever for an automaker to get its message to the right prospects, but harder and more expensive than ever to accomplish that goal.

"Routinely buying prime-time television and being in there against the other 300 models is not going to do it," advises John Damoose, vice president of marketing for Chrysler Corp. "You can have great creative, but it's useless if you don't tell your story with (media) impact and weight."

Media usage is no longer just a tactical question. Leading-edge auto marketers are taking a strategic approach to media, matching it to marketing objectives.

The automotive category accounted for $5.7 billion in measured media advertising in 1990, making it the second biggest ad spending category, trailing only retail, according to *Advertising Age*. That doesn't include unmeasured media such as direct mail, telemarketing, videocassettes, computer discs and special programming created for closed-circuit channels in places such as doctor's offices and airline terminals.

Combine big bucks with big marketing needs, and you get automakers and media companies breaking new ground and writing big stories.

Among them:

- Chrysler Corp. signed a major cross-media deal with Time Warner built around a series of advertorials and special issues of *Fortune*, *People* and *Life*, all using a "Rediscover America" theme. The deal also gave Chrysler access to areas such as product placements in movies, TV programming development, and use of records, books and videos as premiums. General Motors and Mazda Motors of America followed with their own deals with Time Warner.
- GM signed an estimated $400 million, seven-year deal with CBS for sponsorship of regular season and Final Four NCAA basketball, the largest and longest deal ever involving a single sports property.
- Chrysler will be the biggest single sponsor of the 1992 and 1994 Winter Olympics with a $106 million package with CBS.
- GM at $140 million and Toyota Motor Sales USA at $130 million are the biggest backers of baseball in four-year deals with CBS.
- GM's Pontiac division and Chrysler rolled out the biggest-ever direct mail campaigns using video, between them sending 650,000 tapes to minivan prospects.
- Buick kicked off its Roadmaster Wagon launch with a multi-title magazine buy targeted at specific ZIP codes, the first time an advertiser came up with its own target list of subscribers it wanted to reach.
- Saturn Corp. and Volvo Cars of North America produced 30-minute "infomercials" that ran at programming costs which are lower than commercial time. The Saturn piece, centered on how the company and its products came into being, ran on two cable networks. Volvo is currently testing its infomercial in San Diego.
- GM and Chrysler have participated in new "place-based" media, which brings advertising to prospects out of their homes. GM is a charter sponsor of Turner Broadcasting System's The Airport Channel, now in test at six airport terminals, and of the Health Club Media Network, being tested in four cities. Chrysler is involved with Ski TV, which provides programming at ski resorts, and in programming developed for waiting rooms of doctors' offices.

Philip Guarascio, GM executive-in-charge of corporate marketing and advertising, says concerns about the diminishing effectiveness and increasing cost of traditional media created interest in finding new ways to reach potential customers.

"As the cost relationships change, things not affordable five years ago start to become affordable, and therefore there's some experimenting," he says. "Once you start to use (new media), what you do is create a learning spiral. Success breeds success, creating a momentum in that area."

Despite the rise of cable and syndicated TV opportunities, as well as other media, no one is predicting the imminent end of automaker relationships with broadcast television. Automakers spent $1.79 billion on network TV in 1990, more than they spent on any other medium and a 17.8 percent increase from 1989, according to *Advertising Age*. Spot TV was second with $1.66 billion, a reflection of the move to regionalization of marketing strategies and the growing importance of auto dealer ad groups.

"Despite declining rates and shares, network TV is still the single largest place we can go to deliver a reasonably upscale audience at a place and time," says Robert Mancini, senior vice president and director of media services at J. Walter Thompson USA in Detroit, the agency for Ford Division.

"I think the automotive advertisers in general will support it until we come to the point where it's totally lost its value. It certainly hasn't hit that at this point."

But today's consumer is more likely than ever to miss seeing an ad message that runs only on the networks. He or she has dozens of cable channels from which to choose, some of them commercial-free, not to mention a VCR that allows easy zapping of commercials.

"There are two media trends that are at odds," says Marty Choinski, senior vice president and director of media at D'Arcy Masius Benton & Bowles of Bloomfield Hills, Mich., which handles Pontiac and Cadillac divisions.

"Clients are a lot more aware of media options and are asking more questions about them," says Choinski. "At the same time, clients want more bang for the buck, and a lot of the non-traditional media are very tough to measure."

Says Chrysler's Damoose, "The average 30-second prime time TV spot today is $150,000. A single page in *Time* magazine is now $113,000. So obviously, we have to focus our efforts and spend our money carefully."

With the auto sales slump of the past few years increasing bottom-line pressures, some marketers are sticking with the tried and true.

Toyota, for instance, found out in a test that videos were more effective than regular direct mail programs, but didn't go the video route in its campaign for the redesigned 1992 Camry.

"When you have a broad audience like Camry does, there's an expense factor," says Ren Rooney, corporate marketing manager.

Marketing execs say that finding new ways to measure effectiveness is a key to effectively using media in the coming years. The traditional measurement has been CPM, a measurement of the cost-per-thousand of the number of people reached.

"CPM is a benchmark in general media terms, but it is rapidly becoming outmoded because advertisers and agencies are going to be looking more for the value of the audience in relationship to the price," says J. Walter Thompson's Mancini.

His agency helped Ford Division revamp the way it evaluates magazines this year, putting greater emphasis on factors such as reader involvement, circulation vitality and editorial environment. The result was that Ford substantially reduced the number of titles it uses, but made bigger buys in publications that remained on the schedule.

"You have to make a paradigm shift in terms of how you evaluate," says GM's Guarascio. "(CPM) will always be one of the tools that will be used. What we're trying to do is embrace a wider range of tools."

More research than ever is going into developing and assessing media strategy.

Mazda conducted a study last year of the media habits and lifestyles of its prospects, broken down by models. The study was the basis for Mazda's emphasis on more targeted media, such as spot TV and cable, in place of broader network buys, according to Jan Thompson, vice president of marketing.

For all the advances made in reaching the right prospects in the right time and place, many auto marketers say the next several years will bring even greater potential. On the horizon are data bases that provide more sophisticated information about prospects, and technological jumps such as interactive television.

"Today, we're sort of blacksmiths at this," says Stephen Lyons, general marketing manager at Ford's Lincoln-Mercury division. "We're not real good at segmenting media and the messages that go through those media. I think in the next five years the opportunities to advance are just going to be tremendous." □

Raymond Serafin heads Advertising Age's Detroit bureau.

Sales drop 2% in Europe

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — September new-car sales in Germany were slightly below last year's total, but demand in Italy, France and Spain showed the beginnings of an offsetting recovery.

The September dip in Germany was 1.2 percent. In August, the nation's sales were down 20.1 percent from 1990.

According to *Automotive News* estimates, September sales for 17 European countries slipped 2.1 percent from a year earlier, to 900,000 units. Sales for the nine-month period were up 2.2 percent, to 10.71 million.

Analysts said they are uncertain whether a clear pattern has emerged.

"We are seeing some relief in the Southern European markets. But we are at a strange crossroads, and I don't think the current figures establish a pattern," said John Lawson, who follows the industry for Nomura Research in London.

"Germany will go down, but we know the German market tends to be stronger toward the end of the year."

Germany has propped up European auto sales for most of this year, feeding new demand from the reunified eastern states. Although German sales fell 1.2 percent in September, to 234,700 units, the decline was considerably less than the August drop of 20.1 percent from a year earlier.

"Germany has fallen back, but September figures show the drop may not be as serious as previously thought," said Arthur Maher, an analyst with DRI/McGraw-Hill in London. He said he expects German sales to top 4.1 million this year, up from 3.25 million in 1990.

For the first nine months of 1990, German sales were 3.4 million, up 44 percent from last year.

The United Kingdom, Europe's fourth largest market, remained depressed, with September sales off 17.4 percent from 1990, to 126,900. Analysts were optimistic that the worst is over.

"We feel the U.K. has now bottomed out," Maher said.

Carmakers have continued their incentives in the United Kingdom, despite initial claims that the programs would not be permanent. Ford of Europe continued incentives on selected models while General Motors' Vauxhall subsidiary has cut dealer margins "in an attempt to make the consumer haggle less," Maher said.

Even the Rover Group, which stayed out of this summer's incentives war, is mailing discount offers to owners of its cars, he said.

The recession-stricken French market continued a rebound that began in July. Sales rose 2.71 percent in September, to 142,000 units.

The Italian market, which has held up better than others, was up 9.9 percent in September, to 168,400 units. Maher predicted that Italian sales will end the year at 2.3 million, slightly below last year's 2.35 million.

Spain was up 6.2 percent for the month, to 51,800 units, signaling a turnaround. But analysts do not believe the Spanish market will recover fully until 1992.

For the nine-month period, Spanish sales were 665,900, off more than 100,000 units from a year earlier.

The Volkswagen Group continued to dominate European sales with a nine-month total of 1.73 million, up 8.4 percent from last year.

"We used to have discussions at this time of the year about who would win in sales, but no one can touch VW now," Lawson said.

Fiat regained second place, which it lost to GM in August with nine-month sales of 1.34 million units, down 10.4 percent from last year.

Ford held onto third place with 12.2 percent of the market.

General Motors slipped into fourth place.

As east German savings dry up, so do sales

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — As expected, new-car sales in the former East Germany have turned sharply lower as savings there dry up and demand falls to a level that more realistically reflects the region's deep economic problems.

Although final figures are not yet available, preliminary data show that sales in the five eastern states in June peaked at more than 100,000 units and have since dropped to about 70,000 a month.

According to Edmund Chew, an analyst with DRI/McGraw-Hill in Frankfurt, new-car orders have fallen to an annualized level of 400,000 to 500,000.

East German sales have been included in German totals since July 1990, but figures for the reunified states are only available through May. For the first five months of 1991, sales in the new states totaled 324,298; 231,000 units were sold from July to December.

Chew predicts German sales will hit 4.15 million units this year, including 800,000 in the east. But sales will fall to 3.5 million units next year, with most of the decline reflecting a sharp falloff in the eastern states, he said.

The type of autos selling in the east are dramatically different than those in the west, he said.

"Sales are strongly focused near the lower end," he said. "They are buying Skoda and Lada, cheaper imports like Seat and Europeans like Renault and Fiat," Chew said.

The registration data show that Adam Opel AG is the sales leader in the east, with a share of 17.9 percent, more than 3 points higher than No. 2 Volkswagen's 14.6 percent. The General Motors marque has topped Volkswagen because of "aggressive pricing," Chew said.

Ford Motor Co., with an 11 percent share, is No. 3, followed by Renault, with 10 percent.

The Japanese have not made major inroads because their cars are higher priced, Chew says.

One similarity stands out: Red is the most popular color in the east and west, he said.

KIA

Koreans want U.S. dealers

continued from PAGE 1

and preferences of U.S. customers. We placed special emphasis on reliability," Kim said.

The move has been expected. Earlier this year, Kia established an office in Irvine, Calif., to study the U.S. market. An employee last week said the office employs six people, all Korean.

Kia, which is 10 percent owned by Ford and 8 percent by Mazda Motor Corp., sells its Pride in the U.S. market as the Ford Festiva. But the Korean carmaker has been known to be unhappy with the limited volumes produced by the Festiva, which first went on sale in the United States in 1987.

Festiva sales for the nine months through September were off 35.1 percent from a year earlier, to 28,234 units.

Kia will unveil the new models — the Sportage, a sport-utility vehicle, and the Sephia, a four-door sedan that also will be available as a convertible — at the Tokyo motor show this week.

Kim said the company's outside consultants have recommended a simultaneous launch of the cars in the U.S. and Canadian markets, with an initial focus on California and other Sun Belt markets, according to Kim.

"The report is almost completed," he noted. "Once it is submitted, it will take 18 to 24 months to develop the management information system and set up the dealer network," he added.

Although Kim did not provide figures on either the projected cost of the venture or the number of dealers Kia would seek, he said, "Money is the only limitation."

Kim made clear he was referring to the Korean government's current tight-money policy, which has sent lending rates to 20 percent. In addition, major borrowers like Kia have been barred from tapping overseas capital markets for fear the inflow of capital will fan inflation.

Despite the difficulties imposed by the credit crunch, Kia's U.S. launch plans are on track, Kim said. Among the priorities at the moment is assembling the right team, he said.

A short list of Kia candidates for the top slot in the United States has been drawn up, said Kim Seung-Ahn, senior managing director of overseas sales. And a search is about to begin for an American chief operating officer.

The company also has embarked on a search for a U.S. advertising agency, he said.

According to the chairman, Kia's U.S. image will be anchored on high quality, price and superior service. Without a commitment to these three points, "We couldn't win (the customers') attention," the chairman added.

Asked about pricing strategy, the chairman conceded that the company will be up against a widespread perception in the American market that Korean cars should be priced "10 percent lower" than Japanese models of a comparable class.

"It's a fact that we should accept: Korean cars are cheaper," he said.

Ranking export markets in order of importance, the chairman explained the United States will continue as Kia's most important, followed by Europe and Southeast Asia.

Earlier this year, Kia launched the Pride in the United Kingdom, where it will be sold through 150 Mazda dealers. However, there are no plans to build a European plant, noted the chairman.

In Southeast Asia, Kia assembles kits in Taiwan with Ford Lio Ho.

Kia also is gearing up for the Japanese market, where it has already tested the waters with trial shipments of Festivas. In 1992, the company is targeting 4,000 units to be sold through the Autorama chain in Japan.

"We see it as a marketing test," Kim explained.

The company also will show its new 2.4-liter engine at the Tokyo show this week.

According to Lee Han-Baik, Kia's vice president for research and development, the aluminum head engine will replace the Mazda-designed engines that initially will power the Sportage and the Sephia.

Kia's aggressive push to develop new models independently of its two equity partners, Ford and Mazda Motor Corp., will not adversely affect the relationship with the partners, said the chairman.

The Festiva/Pride replacement is being jointly developed by Ford, Mazda and Kia, he said. He added that the Festiva export agreement with Ford will continue until the end of the decade.

"We'll continue joint projects with (Mazda and Ford) while pursuing a parallel independent path," he explained.

The Sportage is being developed with assistance from the U.S. studio of Britain's I.A.D. and Michigan-based Modern Engineering. The vehicle will come in two- and four-door versions and will go into production in 1993. It will be powered by a 16-valve, 2.0-liter, twin-cam 4-cylinder engine.

British engineering consultants Hawtal Whiting and Lotus were employed in the development of the Sephia. To be introduced first on the Korean market in 1992, the four-door sedan will be powered by a 1.5-liter engine while the convertible will be equipped with a 1.8-liter engine.

incentive WATCH

Acura and American Suzuki Motor Corp. are paying factory-to-dealer incentives on select vehicles.

Hyundai Motor America, in addition to its previously announced national consumer rebate program, has a separate plan in California that includes consumer rebates and wholesale incentives to dealers.

Through Jan. 3, **Acura,** the luxury division of American Honda Motor Co. Inc., is offering incentives of $3,000 on the 1991 Legend coupe and $2,500 on the 1991 Legend sedan.

Suzuki's latest rebates are $700 to $1,000 on the 1991 Swift, $400 to $700 on the 1992 Swift, $500 to $1,000 on the 1991 Sidekick and $300 to $700 on the 1992 Sidekick.

In California only, **Hyundai** is offering consumers $750 to $1,000 on 1991 Excels, 1991 Sonatas and 1991 Scoupes through April 2. Also, Hyundai is paying a wholesale incentive of $300 to $500 to dealers who buy 1991 Excels, Sonatas and Scoupes. The wholesale program expires Nov. 11.

Farr employs 227 people at four dealerships, including Mel Farr Ford Inc. in Oak Park, Mich., Mel Farr Lincoln-Mercury in Waterford, Mich., Mel Farr Toyota in Bloomfield Hills, Mich., and Mel Farr Ford Inc. in Fairfield, Ohio.

He was listed No. 5 in gross sales among black auto dealers in the United States in the June 1991 issue of *Black Enterprise* magazine.

Farr is co-founder and chairman of the Black Ford-Lincoln Mercury Dealers Association and chairman of the National Association of Minority Auto Dealers.

He played with the National Football League's Detroit Lions from 1967 to 1974.

For further information on the Automotive News World Congress, write Wendy Barhydt, Automotive News World Congress, UMTRI/OSAT, 2901 Baxter Road, Ann Arbor, MI 48108-2150. The telephone number is 313-764-5592.

Ford extends SHO clutch warranty

DEARBORN, Mich. — Ford Motor Co. is giving owners of about 26,000 1989 and 1990 Taurus SHOs extended warranty coverage on the clutch for two years/24,000 miles, or six months from the date of notification, whichever benefits the owner more.

Ford said during shifting, some owners may experience clutch slippage, high pedal effort and gear noise. A revised clutch assembly will be installed to correct the problems. Reimbursement will be provided for previous repairs.

Output reaches 7 million

ROBIN-LYN RAIMEY
Special Correspondent

The seven-millionth vehicle produced in the United States this year was built Oct. 16. Last year, the industry reached that figure on Sept. 11.

So far this year, 4,359,546 cars have been assembled, 13.9 percent below the the year-ago tally.

Car production in the United States was 136,757 last week, up 14.9 percent over the previous week and up 5.1 percent over 1990.

Year-to-date, 2,746,067 trucks have been built in the United States, 15.3 percent below the 1990 total of 3,241,549.

Last week's truck production was 90,599, up 15.2 percent over the previous week and up 16.1 percent over the 1990 week.

Canadian car production of 23,011 last week was 6.4 below the previous week's total, but it was up 3.5 percent over last year. Truck production in Canada was 17,354, last week, 132 more than the previous week, but down 10.2 percent from the year-ago week.

General Motors accounted for 46.7 percent of last week's car production in the United States, followed by Ford Motor Co., 22.7 percent; Chrysler Corp., 9.5 percent; Honda of America Manufacturing Inc., 6.8 percent; New United Motor Manufacturing Inc., 3.1 percent; Mazda Motor Manufacturing (USA) Corp., 3.0 percent; Toyota Motor Manufacturing (U.S.A.) Inc., 2.7 percent; Diamond-Star Motors Corp., 2.5 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.1 percent, and Subaru-Isuzu Automotive Inc., 0.9 percent.

GM's Buick-Oldsmobile-Cadillac Group scheduled an overtime shift last Saturday at the Buick City plant in Flint, Mich., and the Lordstown, Ohio, car plant, and two shifts at the Wentzville, Mo., car plant.

GM's Chevrolet-Pontiac-Cadillac Group scheduled overtime last Saturday at its Doraville, Ga., and Oklahoma City car plants, and the GM Truck & Bus Group scheduled two Saturday overtime shifts at the Shreveport, La., and Moraine, Ohio, plants.

GM of Canada scheduled overtime last Saturday at the Oshawa, Ontario, No. 2. car plant, the Oshawa truck plant and the Scarborough, Ontario, truck plant.

Ford scheduled an overtime shift last Saturday at the Lorain, Ohio, truck plant, and worked daily overtime in addition to a Saturday shift at the Kansas City and Louisville, Ky., truck plants.

Chrysler scheduled two overtime shifts last Saturday at the St. Louis No. 2 truck plant. The Warren, Mich., truck plant worked daily overtime and was scheduled to work last Saturday.

Honda of America Manufacturing Inc. scheduled overtime last Saturday at Marysville, Ohio.

Nissan to allow duals in Japan

TOKYO — Nissan Motor Co. will specifically allow its 221 Japanese group dealers to sell foreign cars and non-Nissan parts in a new contract.

The contract meets critics head on. U.S. trade negotiators and automakers have said networks of exclusive dealerships have effectively kept U.S. products out of the marketplace. (See related story, Page 4.)

Nissan says it is signing the new contract "to clarify the freedom of domestic distributors." The company says they were never "forced" to handle only Nissan products, but the current contract has required "prior consultation" with Nissan. That clause is being dropped in the new contract going into effect this week.

Nissan is the first automaker to announce such a change.

NADA waffles on program cars

Report reiterates stand on subsidies

CHARLES M. THOMAS
Staff Reporter

Despite a torrent of dealer complaints about program cars and their effect on new-car sales, National Automobile Dealers Association directors adopted a task force report last week that harps on manufacturers to halt fleet subsidies, but by and large straddles the fence on the nettlesome issue of program cars.

Among the recommendations by the NADA task force assigned to study the issue are that manufacturers repurchase all program cars from daily rental companies, and distribute them to franchised dealers exclusively through auto auctions.

The report fell far short of demands that manufacturers limit program car volumes, even though it does ask automakers to keep repurchase units in daily rental fleets for 12,000 miles and six months.

Ford Motor Co., General Motors and Toyota Motor Sales U.S.A. Inc. already offer to repurchase 100 percent of all program cars. But Chrysler Corp., for example, repurchases only 75 percent of program vehicles, leaving disposal of the remainder to the daily rental company.

"The big thing is the adoption of hold periods and increasing mileage limitations," said Frank Anderson Jr., NADA president. "We need a greater differentiation on program car vehicles to set them apart from new cars."

Though manufacturers like GM and Ford are raising the average mileage on program cars to 12,000 miles and six months before they

Tokyo covers all the niches

RICHARD JOHNSON
Staff Reporter

TOKYO — Japan's fertile-minded designers, engineers and product planners threw down the gauntlet at the 1991 Tokyo Motor Show, rolling out concept and production models that filled every conceivable niche and created a few new ones.

Makuhari Convention Center was packed with prototypes and production cars — so many new models that in the weeks before the show Japanese companies ran out of days in which to preview them. Toyota had to launch the new Aristo and Crown Majesta models on the same day.

Besides Aristo and Crown, new production models breaking cover here include

U.S. makers set to build right drives

LINDSAY CHAPPELL

American car factories are suddenly lining up to put steering wheels on the wrong side.

Barely three years ago, the Big 3 and Japanese transplants alike — as much as they wanted to export cars to Japan and other right-hand-drive markets — were saying that it just wasn't economically feasible to move the steering wheel.

But now, renewed interest in exporting and a gaping trade deficit with Japan is prompting a change.

Only one U.S. operation, Honda of America Manufacturing Inc., is currently building right-side-steering cars for export, but the ranks

Iacocca plans exit as victor

MARY CONNELLY
Staff Reporter

HIGHLAND PARK, Mich. — Despite the anemic U.S. economy, Chrysler Corp. Chairman Lee Iacocca will spearhead a market-share assault in 1992 in a crucial bid to return the company to profitability before his retirement at the end of next year.

The strategy will focus on two key markets: the high-margin sport-utility segment and the brutally competitive mid-sized sedan class. Chrysler must make strong inroads into both to generate cash and maintain its standing as a full-range vehicle manufacturer.

Chrysler expects pent-up demand for vehicles in a recovering U.S. economy during a presidential election year to aid its market-share drive.

"I really think that 1992 is a turnaround year for the country first and then the auto industry," Iacocca said in an interview last week.

"Something has got to happen in 1992. I am an optimist because there is a cycle called 'being elected president or senator.' That cycle is going to hit next year. You might have the whole Republican Party's future at stake here."

Iacocca, who has been more optimistic about 1992 than many other observers, acknowledges that the industry currently is being crushed by flagging consumer confidence.

Iacocca: bullish for '92 prospects

"The final 1991 sales are going to look awful because the last quarter is not moving," Iacocca said. "Showroom traffic has taken a dive. How the hell can that be? It's the middle of fall, and all the new models are out.

"Most recessions really nail the blue-collar worker. He gets laid off until people want to build inventories or consumer demand returns," he said. "This one is different. You have 53-year-old vice presidents looking for a job. When do people start buying — that is the $64 question."

The aggressiveness of its market-share efforts give Chrysler good reason to hope that buyers will return to showrooms in 1992. As

Ranger redo

JIM DUNNE/POPULAR MECHANICS

Ford is readying a redesigned Ranger compact pickup truck for introduction as a 1993 model, possibly next summer. The new truck has a more aerodynamic look with a sloping hoodline and doors that curve into the roof, eliminating the drip rails. The rear of the cab extends over the top of the front part of the cargo box. Mazda will get a rebadged version of the new truck for 1994.

company has cut his year.

The 21 positions eliminated last week were the only ones terminated outright. Nearly half of the 114 jobs lost since the end of 1990 came through early retirement. The rest were cut by attrition or by eliminating jobs that were budgeted but not filled, said Volvo spokesman Robert Austin.

Following last week's layoffs, Volvo Cars had 719 U.S. employees, down from 833 at the end of last year.

— Jim Henry

Alamo plans 15% boost to GM dominated fleet

NEW YORK — Beleaguered General Motors' sales will get a slight boost from Alamo Rent A Car this model year. The daily rental company will have 127,000 vehicles in its fleet during peak tourist seasons, an increase of 15 percent, or 17,000 vehicles, from the previous year.

More than 90 percent of the vehicles Alamo buys are from GM. Alamo is the largest Buick customer in the United States, and the second largest customer of Chevrolet and Cadillac.

Bank calls in loans; dealerships go bankrupt

Blaming two banks for failing to renegotiate two balloon notes for $4.5 million even though payments were current, the JKJ automotive group filed for bankruptcy under Chapter 11 of the federal bankruptcy code last week for seven of its eight dealerships.

John W. Koons Jr., president of the company, said the dealerships will continue to operate until debts with creditors are renegotiated.

The dealerships which have filed for protection against creditors under the federal bankruptcy code are JKJ Chevrolet in Sterling, VA.; JKJ Buick-Isuzu-Mitsubishi in Woodbridge, Va.; JKJ Saturn in Sterling, Va.; JKJ Chrysler-Plymouth in Alexandria, Va.; Koons Chrysler-Plymouth in Vienna, Va.; and JKJ Lincoln-Mercury-Isuzu and JKJ Buick, both in Arlington, Va.

The only dealership in the group not filing for protection is JKJ Honda of Woodbridge, Va.

— Charles M. Thomas

U.S., battery consortium budget $260 million

WASHINGTON — The Department of Energy and the U.S. Advanced Battery Consortium will spend $260 million over the next four years to develop a new generation of batteries for electric vehicles under an agreement signed Friday at the White House.

The consortium was established in January by the Big 3 and electric utilities. Government participation adds $130 million of investment and the brains of national laboratories.

The goal of the project is to make electric vehicles competitive by the year 2000, President Bush said at the ceremony.

— Max Gates

European trade pact would dissolve barriers

BRUSSELS — Nineteen European nations joined forces last week in a move that will create the world's largest and most lucrative consumer market.

The 12-member European Community, which had its own plans to form a single market by 1993, teamed with the seven-nation European Free Trade Association to form a trade zone that will stretch from Greece to Iceland.

Under the accord, which still must be ratified, the nations will tear down the many trade barriers preventing the free movement of money, goods and services across borders.

Pontiac loans vehicles to Oakland fire victims

Pontiac and one of its dealers will provide temporary loaner vehicles to victims of the devastating fire in Oakland, Calif., that destroyed 2,900 residences.

Two-week loaners will be provided to anyone who presents a valid driver's license, verifiable residence information and proof of vehicle insurance, said Dean Weaver, owner of Connell Pontiac in Oakland.

— Phil Frame

APVs readied for export at Tarrytown plant

General Motors in 1992 plans a 25 percent increase in exports of its APV minivans, which now are being 100 percent homologated for overseas sale at the assembly plant in North Tarrytown, N.Y.

GM's International Export Sales will market 6,700 APVs in Europe, Mexico and Brazil during calendar year 1991, officials said at a news conference last week. The group expects exports to hit 8,400 units in 1992.

Homologation — preparation of the vehicles to meet foreign standards — began at the plant in September.

— Phil Frame

Ford, Mazda to decide on European deal soon

TOKYO — Ford Motor Co. President Philip Benton says he expects a decision on a possible Ford-Mazda joint venture in Europe "by the end of the year."

The two companies reached a basic understanding two years ago to develop a compact car and build it in Europe, probably at Ford's plant in Saarland, Germany. They have not been able to complete the deal, but Benton, speaking to the Japanese press, said, "Our objective is to do it."

— Mary Ann Maskery

briefly

Maybe Honda will relocate

A familiar rhetorical gibe thrown at **Honda Motor Co.** is this: "If you're so American, why don't you move your headquarters to the United States?" Now President Nobuhiko Kawamoto says that could happen. "Everything is open," he said at the Tokyo Motor Show. Honda is now trying to develop a truly global approach to the industry, where Japan becomes just one part of the system, not the controlling part. "If the central area of business becomes the United States, we could move to the U.S."

YOU SAY AUTOLATINA . . . in Brazil. And **Ford** and **Volkswagen** now say AutoEuropa in Portugal. The two companies have given a formal name, AutoEuropa Automoveis Lmta., to their 50-50 joint venture in Setubal, Portugal. The $2.8 billion project will begin producing a new minivan in late 1994. The two companies formed Autolatina when they combined operations in Brazil and Argentina in 1987.

YUTAKA IACOCCA — Nissan President Yutaka Kume says he is ready to become Japan's Lee Iacocca and speak up to defend Japanese interests when trade talk includes proposals to limit transplant production or market share. "I am fully aware that these issues become emotional and politicized. But over-restrictions are unfair. And I will be just like Iacocca when it comes to speaking out loudly against them."

Kume wants to be Japan's Iacocca

THE 100 MPG QUESTION — You can't shove toothpaste back into the tube. On Oct. 17, a week before the Tokyo Motor Show, the *New York Times* reported that **Honda Motor Co.** was expected to unveil "an unusual two-seat passenger car whose fuel efficiency it says could top 100 miles per gallon." The EP-X car was at the show, but Honda President Nobuhiko Kawamoto denied the 100 mpg figure. "We said nothing about that," he said. So did the *Times* make it up, or is Honda back-pedaling? We won't take odds. But we bet we hear about the 100 mpg Honda for years.

MPG WARS — And here's the first repercussion. **General Motors** cars get the best gas mileage in seven of 18 EPA categories for vehicles with automatic transmissions, so company officials were indignant over the glowing published reports of the 100 mpg **Honda** concept car. GM decided enough was enough, and it rushed to reporters a photo of the 200-mpg, motorcycle-like Lean Machine concept vehicle which GM showed in the early 1980s. GM noted that the one-passenger Lean Machine has been on display at its World of Motion exhibit in the EPCOT Center for nearly a decade.

GM's Lean Machine

Buick finally hits sales skids after product shortfall

JIM HENRY
Staff Reporter

NEW YORK — The sales slump finally touched Buick, which has been faring far better than average this year. But even in its travail, the division remains the envy of other brands.

Part of Buick's shortfall was lack of cars to sell in the early days of the 1992 model year.

For the industry, sales of cars and light trucks were off 15.3 percent for Oct. 11-20, based on the daily selling rate. Unit sales totaled 275,171, down 24.7 percent, but there were eight selling days this year and nine in 1990.

Sales fell for each of the Big 3. By daily selling rate, Chrysler Corp. was off 12.5 percent, Ford Motor Co. dipped 20.8 percent, and General Motors slid 16.2 percent.

October has been unkind to Buick. As of Sept. 30, Buick sales were 7,610 units ahead of last year, making Buick one of the few brands — and by far the largest — with higher sales this year than last. But in the first 20 days of October, sales were off 5,240 units, shrinking the division's year-to-date improvement to a slim 2,370 cars.

Spokesman Lawrence R. Gustin said Buick started the 1992 model year Oct. 1 with the lowest inventory of carryover models in 17 years, and by last week some dealers still hadn't received stocks of all the new models.

Contributing to good sales earlier in the year were customer incentives tied to option packages on 1991 models. Those rebates expired Sept. 25.

American Honda Motor Co. Inc. also suffered from lack of product.

The company's daily sales rate plunged 30.4 percent in mid-October.

Acura Division did well despite low inventories; its sales rate rose 15.6 percent. For the year-to-date, Acura is 1,006 units ahead of 1990.

John Tufo of Larchmont, N.Y., one of Acura's top 10 dealers, said

> "In 17 years, I've never had so many people shopping for leftovers. And I'm making money on the leftovers."
>
> **JOHN TUFO**
> ACURA DEALER

he could be selling more cars, but he doesn't have any 1992 models and his inventory of 1991s is light. "The lot's like half-empty," Tufo said.

He said Acura's dealer incentives — $2,500 on 1991 Legend sedans and $3,500 on Legend coupes — have helped sell the leftover models while maintaining his gross profits.

"In 17 years, I've never had so many people shopping for leftovers. And I'm making money on the leftovers," Tufo said. "If I had more cars, it would have been an above-average month."

He expects October to be about average for the dealership, with sales of 120 to 125 cars.

American Honda spokesman Mike Spencer said 1992 Hondas haven't arrived at dealerships yet, except for a limited supply of Civic and Accord four-door sedans.

Honda did not start building 1992 Civics at its East Liberty, Ohio, plant until Oct. 1, when the last 1991 was produced.

East Liberty was the last U.S. assembly plant to switch over to 1992 models.

Sales results were mixed for other Japan-based companies:

- The daily sales rate rose 2.2 percent for Nissan Motor Corp. in U.S.A.
- Toyota Motor Sales U.S.A. Inc. saw its daily sales rate fall 16.6 percent for the period.
- At Mitsubishi Motor Sales of America Inc., the sales rate rose 33.1 percent.

Van dumping ruling delayed until Dec. 27

MAX GATES
Staff Reporter

WASHINGTON — The Commerce Department has pushed back by 50 days its preliminary ruling on the Big 3's minivan dumping charges against Japanese makers.

The department's International Trade Administration will rule by Dec. 27 on charges that Toyota Motor Corp. and Mazda Motor Corp. have been dumping minivans in the U.S. market at prices lower than similar models sold in Japan.

The Big 3 filed their petition last May. The U.S. International Trade Commission ruled in July that a full investigation should be conducted. The commission said there was reasonable indication that the Big 3 had been hurt by imports allegedly sold at less than fair market value.

Commerce's decision had been expected by Nov. 7. After it releases its preliminary ruling, makers will have 75 days to appeal. And if Commerce finally concludes that the Japanese are guilty of dumping, the ITC will determine damage to the domestic industry and impose additional duties.

Attorneys for Toyota opposed the delay in the Commerce Department's preliminary ruling, saying the company has worked hard to meet original deadlines and may not have key personnel available later in the year.

Earlier, after twice reconsidering the decision, Commerce officials determined that the investigation will cover U.S. sales of Toyota's Previa minivans during the six months prior to the filing of the dumping charges. The investigation of Mazda's MPV minivan sales has been extended to eight months to consider the effects of price changes in the fall of 1990.

Since their initial petition, the Big 3 have altered their minivan definition to attempt to include the Mitsubishi Expo, which appears to be a minivan-wagon hybrid.

The Japanese makers also are fighting a request by the Big 3 that the Big 3's in-house lawyers have access to confidential court documents. The Japanese say that could lead to exposure of proprietary information, particularly about the relationships between the Japanese makers and their suppliers.

Chinese VW venture to spend millions to triple build

STEPHEN VINES
Staff Correspondent

HONG KONG — The Shanghai Volkswagen joint-venture car company has reached formal agreement on a $464 million investment program aimed at tripling output of the Santana sedan to 150,000 units per year by 1995.

The joint venture company is China's largest carmaker. Output for this year should reach 50,000 units.

Germany's Volkswagen AG owns half of the company, in partnership with four Chinese investors led by the Shanghai Tractor and Automobile Corp.

The new investment compares with start-up capital of $86 million in 1985.

The enlarged company will take over the Shanghai Automobile Industry Corp. plant next door that now makes the Shanghai Sedan, which is three decades old.

A new model will eventually be produced there, but the company will not reveal details, except that it will be larger than the 1.8-liter Santana.

An engine plant, with annual capacity to produce 100,000 units, has started production and is shipping engines to Germany.

The engine plant's annual capacity will be increased to 150,000.

Shanghai Volkswagen also claims to have achieved 60 percent local content in its cars, which would be the highest level of localization among China's joint-venture companies.

That will will increase to 70 percent by the end of the year, Shanghai Volkswagen said. The company has set a target for next year of 85 percent.

In recognition of its success in this sphere, Shanghai Volkswagen has become the first joint venture company in China to be given permission to import parts without a license.

Second VW venture poised to start assembling Jetta

STEPHEN VINES
Staff Correspondent

HONG KONG — A Chinese car company based in the northeastern city of Changchun is on schedule to produce its first cars this month. The company is a joint venture between First Auto Works and Volkswagen.

The company's plant will assemble 1,000 units from complete knockdown kits as a trial run, intending to reach full capacity by 1996 with an annual output of 150,000 vehicles.

The First Auto Works-Volkswagen venture plans extensive cooperation with the well-established Shanghai Volkswagen operation despite the considerable distance between the two plants. In addition, the two companies will develop joint servicing outlets.

Though there are very few hatchbacks on China's roads, the Golf could join the Jetta at the Changchun assembly plant.

First Auto Works-Volkswagen also plans to make 270,000 engines and 180,000 transmissions per year.

Volkswagen holds 40 percent of the joint venture; the remainder is held by Chinese interests led by First Auto Works.

The current plan is to produce Volkswagen's Jetta model, although Klaus Wulf, the venture company's first vice president, does not rule out the possibility of also making VW Golf cars. The two cars share many components.

The Jetta has been chosen, says Wulf, because after some discrete market testing in China, "we got the very clear feeling that the Chinese really understand the Jetta but have difficulty understanding the Golf."

There are very few hatchback cars on China's roads.

The engine and transmission plants are scheduled to come on stream by 1995 or 1996. The plan is to export a significant part of the output to Volkswagen factories abroad.

Safety rules slow startup on '92 conversions

JOSEPH BOHN
Truck Editor

Van converters are still focusing their efforts and attention on making their 1992 models comply with new federal safety regulations.

"Most of us cannot yet build the entire product line with all the options and meet the compliance requirements," said the president of a major conversion firm in the Elkhart, Ind., area.

As a result of new designs, converters are grappling with things like relocating all the "H-points," or places where they mount the top of their three-point brackets in relation to the seats.

Econolines present a particular problem since Ford was late in getting prototypes to converters and suppliers. That has led to a delay for suppliers in getting molds made for plastic and fiberglass components such as tops and running boards.

While the industry double- and triple-checks its early production models and chafes at the frustration of not being able to fill orders as quickly as it would like, its concern with the safety issue is notable.

Earlier this year, several randomly selected vans failed to meet the National Highway Traffic Safety Administration's tests for seat-belt anchorages.

The experience obviously heightened awareness and concern about safety compliance.

"I'm proud of everybody's efforts in compliance. There's a lot of thinking about (federal safety standards) 207, 208 and 210. It's a win for consumers," said the van-conversion company official.

Companies are unwilling to let chassis go until they are in complete compliance. And if NHTSA conducts more tests this year, the betting is that all the test vehicles will pass.

Construction standards have been upgraded significantly, even among the smaller converters, because of their greater concern over potential liability.

And Detroit chassis suppliers have been pounding away on quality and compliance issues in meetings with converters and inspections of their operations.

The issues were in the forefront of Ford Motor Co.'s and Chrysler Corp.'s annual sales meetings with converters in Cleveland last week, according to Jerome Mittman, Ford RV sales manager, and James Lynch, Chrysler special vehicles sales manager.

Conversion company presidents and owners in the Elkhart community now are talking about engineering and production issues at social functions in the same way they normally discuss sales and other trends.

The safety concerns also have benefited some suppliers of complete installation systems like The Compliance Group of Milwaukee.

Allen Swenson, company spokesman, said the firm is now servicing about 30 percent of the van conversion market. It has 45 major converters and is adding about two new ones a week.

Sales are running at a rate of more than $10 million yearly.

The Compliance Group's packages include seat pedestals, slides and belt harnesses for middle-row chairs and rear sofas, underfloor installation bracketry and all required reinforcements and hardware.

It has complete kits for full-sized Chevrolet, Ford, Dodge and GMC vans and compact GM vans.

The systems start at about $300 to $330 per vehicle and save converters from having to pay for tests on their own designs.

The company also has provided testing assistance to a number of major van conversion seating manufacturers, like Flexsteel Industries and Weiland Design.

More than a limo

Van conversion sales have rebounded more strongly than the overall car market because of their upscale appeal. Buyers typically live in suburban areas and travel a lot, according to a study done for the Recreation Vehicle Industry Association in Reston, Va.

Imperial buys Ger-Win rights

JOSEPH BOHN
Truck Editor

Imperial Industries Inc. of Elkhart, Ind., has acquired exclusive marketing rights to the Ger-Win GMC product line, according to James Brown, Imperial president.

Ger-Win is part of American International Ger-Win Corp. in Bristol, Ind.

Purchase of Ger-Win's marketing rights transferred that company's GMC bailment pool account to Imperial. It also enables Imperial to market GMC van and other truck conversions under the Ger-Win name.

Imperial will call its GMC vans "Imperial Ger-Win," initially, but gradually will de-emphasize the Ger-Win name in favor of Imperial, Brown said.

Imperial's sales were $3.2 million in 1990, and it projects $6 million-plus in 1991, Brown said. He anticipates topping $11 million in 1992.

Imperial is Chevrolet's second-oldest bailment account and finished in 12th place among Chevrolet's bailment accounts for the 1991 model year.

The company's growth has been somewhat flat in recent years. Its principal owner is Ken Parker, who is chief executive officer.

Brown bought into the firm in February as a minority owner. He expects a buyout agreement with Parker to give him principal ownership by mid-1992.

Brown owned Chariot Vans Inc. in Elkhart before selling 51 percent of it to Georgie Boy Manufacturing Inc. in Edwardsburg, Mich. He stayed with the firm as a part owner for a number of years before leaving in February 1990.

He plans to leave Imperial's structure as it is.

Imperial is currently running at an annualized rate of 1,400 Chevrolet, 400 GMC and 200 to 300 Dodge and Ford conversions.

The deal was good financially for Ger-Win as well.

Jerry Kash, president of American International Ger-Win, said he did not have enough salespersons to develop the full potential of the GMC pool account.

Ger-Win still has its Ford, Chevrolet and Dodge pool accounts, Kash said, and plans to build up Dodge sales in particular. He expects to sell about 2,000 conversions in the 1992 model year, with Dodge accounting for half of them.

Under his agreement with Brown, Kash will still do a few GMC drop-ship conversions.

Minivan chassis still need work

Ford, Chrysler face price, safety issues

JOSEPH BOHN
Truck Editor

Ford Motor Co. and Chrysler Corp. face some additional work before they can launch their minivan conversion chassis, according to van converters.

Ford plans to begin building Aerostar RV prep packages on Nov. 4, said Jerome Mittman, Ford Division RV sales manager.

The company repriced its 1992 Aerostar RV van chassis and prep package to make it more than

Jerome Mittman, Ford Division RV sales manager, targets the start of production of Ford Aerostar RV prep packages for Nov. 4.

$1,000 cheaper than an Aerostar XLT factory wagon.

Still, that may not be enough.

Van conversions typically compete against factory passenger wagon versions of the same vehicle on price as well as appearance and equipment.

Glaval Inc. of Elkhart, Ind., Ford's largest van conversion pool account, thinks there has to be at least a $1,500 price spread between the RV package unit and the factory wagon to make the conversion vehicle successful.

Kevin Slater, Glaval vice president of sales, said that opinion came from dealers his company surveyed.

"The chassis has to be priced so that when you put on a conversion selling for $3,000 at dealer cost, the dealer can buy it for less than a mid- to high-line factory wagon," Slater said.

Glaval hasn't examined Aerostar's pricing structure in great detail yet because it is still totally focused on getting production of its full-sized van conversions up to full speed, Slater said.

It also has to clarify some details of the Aerostar equipment package he added.

Still, the company does plan to "seriously" look into converting both Aerostars and Dodge Caravan C/Vs by January, said sales officials.

Chrysler, and to some degree Ford, face the additional problem of getting suppliers to invest money to produce safety-certified systems for the minivans, according to Robert Wolfe, owner of Advanced Creations in Romulus, Mich.

"The big problem they (chassis manufacturers) have is getting suppliers hyped up enough to spend the money it takes to develop and test the seating and restraint systems (for minivan conversions) because of their previously low sales volumes," Wolfe said.

Chrysler didn't offer a Caravan C/V conversion package last year, but had one a couple years ago.

Wolfe said that even if it doubled its previous yearly volume, there wouldn't be a big enough market to "seriously get anyone into it."

The new safety regulations require suppliers to spend hundreds of thousands of dollars designing, testing and tooling seating and restraint systems. Without the lure of a big enough market, they're unlikely to invest the money to do so, Wolfe said.

And without supplier-certified systems, converters won't get into the market.

"I'm not ordering them, and I don't know anyone who is because we can't get the components," said Wolfe, whose company primarily converts Dodges.

There's a possibility of Chrysler working with one of the major seat suppliers to develop a certified system for converters. But, because of the volume limitations, it would likely be just one.

With the new safety regulations imposing more limitations, such as overhead consoles that cannot protrude more than two inches down, interior space limitations of minivans also pose problems for converters.

Still, Chevrolet Astro and GMC Safari minivans have been consistently strong sellers in the conversion market.

It seems the success of Ford and Dodge's minivan conversion programs will depend on how much effort they want to put into making them succeed.

RVIA re-elects officers at special meeting

RESTON, Va. — The Recreation Vehicle Industry Association re-elected as its chairman Mel Adams, president and chief executive officer of Recreation Vehicle Products Inc. in Wichita, Kan.

Elections were held in Las Vegas at a special board of directors meeting.

The group also re-elected H. Wayne Dahl, president and chief operating officer of Holiday Rambler Corp. in Wakarusa, Ind. Dahl will again serve as first vice chairman. John Zimmerman, chairman of Sunline Coach Co. in Denver, Pa., was re-elected second vice chairman.

Officers began serving one-year terms Oct. 1.

GMAC offers 2.9% loans on 3 new '92 cars

ARLENA SAWYERS
Staff Reporter

To stimulate sales, General Motors, through General Motors Acceptance Corp., is offering cut-rate financing on three car lines that were redesigned for 1992.

Buyers of 1992 **Pontiac** Bonneville, **Buick** LeSabre and **Oldsmobile** Eighty Eight Royale can finance their cars at 2.9 percent for up to 48 months through Feb. 4.

Chrysler Corp. and Saab Cars USA Inc. enhanced their consumer incentive programs, and Rolls-Royce Motor Cars Inc. returned to the incentive fray last week.

Also, Cadillac, Nissan Motor Corp. in U.S.A. and American Honda Motor Co. Inc. are offering incentives on 1991 and/or 1992 vehicles.

Through Dec. 31, **Chrysler** is paying a $500 consumer rebate on 1992 Dodge/Plymouth Colt and Eagle Summit models. Previously, the rebate on those vehicles was $300. In lieu of cash, consumers may choose financing of 4.9 percent to 9.9 percent based on contract length.

Last week, **Saab** expanded its "Flexible Finance Program" to include its 1992 Saab 900S convertible and 900 turbo convertibles. The program previously included only 1992 Saab 9000 models.

The finance program allows consumers to choose interest rates of zero to 10 percent and monthly payments based on the down payment.

For example, a 1992 Saab 900S convertible with a suggested retail price of $31,035 (including destination charge) can be purchased with 0 percent interest and monthly payments of $333 for 48 months with a 40 percent down payment.

A financial contribution by the dealer is required.

Terms are available for 24, 36 and 48 months, and down payment requirements range from 20 percent to 40 percent. Saab's program expires Oct. 31.

Starting tomorrow and continuing through Dec. 31, **Rolls-Royce/Bentley** will pay the luxury tax for its buyers. Consumers may deduct the amount at purchase or receive a check from the importer.

The company offered the same program last summer from June 10 through Aug. 12.

Cadillac buyers are eligible for a $2,000 rebate on any 1991 Cadillac except Allante. The program ends Dec. 31.

Nissan dealers who reach 100 percent of their sales quotas earn $200 on all 1991 and 1992 cars and trucks retroactive to the first unit sold.

Additionally, Nissan is paying dealers $200 to $1,800 on 1991 cars and $1,000 on the 1992 Stanza. Truck rebates are $1,200 on 1991 models and $900 on 1992s. The dealer incentive on Pathfinders is $1,400 on 1991s and $600 on 1992s.

The previously announced incentive of $2,500 to $3,500 on the 1991 300ZX expires Feb. 2. Incentives on other Nissan vehicles end Nov. 4.

Honda dealers are entitled to a $400 factory incentive on 1991 Civic four-doors and a $500 ad allowance on 1991 Accord four-doors through Nov. 4.

NADA
Seeks compromise on program cars

continued from PAGE 1

are remarketed to dealers, some still sell at auction with only 3,000 to 6,000 miles on them.

"This depreciates the value of new cars in the eyes of customers," said Anderson.

NADA wants program cars marketed equitably through franchised dealers, so a dealer can't corner a market, or flood a market with program cars, which plays havoc with prices.

The association is opposed to methods of marketing the vehicles outside of the auction network. Ford operates telemarketing programs selling repurchased vehicles directly to dealers in remote areas who can't attend auctions.

GM and Chrysler are testing pilot projects in Florida that involve skirting auctions by selling vehicles directly to dealers.

NADA has officially named repurchase vehicles "program cars" and defined short-term as meaning six months of operation and low mileage as 12,000 miles.

Directors apparently added a statement opposing fleet subsidies to the task force report, and included program cars as subsidized vehicles. But even though NADA opposes fleet subsidies, it "recognizes that program cars are a short-term remedy to a long-term problem."

Most dealers who sell program cars readily admit those sales are keeping their dealerships afloat in this downturn. For manufacturers, program cars are helping to keep factories operating and market share secure.

Program cars have grown to about 1.5 million vehicles this year. GM alone has remarketed 500,000 program vehicles to dealers through September. Chrysler sold 200,000 units and Ford has sold an estimated 300,000 vehicles so far this year.

Nissan North America Inc., which had decided to phase out program cars by year end, announced in September that it has re-entered the market after dealers protested.

More importantly, a survey by the NADA Dealer Candidate Academy reports that 78 percent of dealers believe that program cars substituted for new-car sales, but the same percentage say program cars are helpful to dealers.

Hence, program cars are a problem for NADA because dealers have always opposed fleet subsidies and program cars fall into this category.

Dealers are adamant that they should be able to buy vehicles for less than anyone else — even fleet buyers.

"For 25 years now the automakers have been offering special low prices to business fleets and rental companies," said a spokesman from the Ford Dealer Alliance. "As a result the consumer pays more so that the favored fleets can pay less."

Ford Dealer Alliance is a manufacturer watchdog organization comprising 1,500 Ford and Lincoln-Mercury dealers based in Hackensack, N.J.

Manufacturers offer several kinds of fleet subsidies, including lower prices on fleet purchases, according to the Ford Dealer Alliance.

The task force recommendations adopted by NADA directors will be turned over to the association's industry relations committee and brought before manufacturers.

Transmission defect baffles Ford; 788,796 trucks have it

Ford Motor Co. and Mazda Motor of America Inc. are notifying owners of 788,796 Ford-built compact trucks of a safety defect in the parking gear of the vehicles' automatic transmission that could let the trucks roll.

Ford has not determined the exact problem with the parking gear yet, according to spokeswoman Kathryn Black.

So it is not yet recalling the vehicles, but simply notifying owners of the problem and advising them to set their parking brake and remove the ignition key when stopping their vehicles.

Ford hopes to come up with a permanent fix and send out recall notices before the end of the year, Black said.

The vehicles affected include 1991 Ford Aerostar minivans and Explorer sport-utilities, including the two-door version that is also sold by Mazda under the Navajo name. Also included are 1990 Ford Aerostars and Ranger pickups equipped with A4LD automatic overdrive transmission.

Black said about 40 accidents have resulted from the defect, including four that caused minor injuries.

The Explorer has been one of Ford's most successful vehicles and was the ninth best-selling nameplate in the United States during the 1991 model year.

The two companies are jointly developing a new line of compact pickups which will be sold starting in 1993 model year. AN

GM may acquire Fiat car plant

FRANKFURT – General Motors is considering buying a vehicle assembly plant in Milan, Italy, that Fiat plans to close.

Fiat says it will shut the 2,500-employee plant and transfer production of its Panda and Y-10 cars to other facilities.

Fiat said it has been discussing sale of the plant to GM's Automotive Components Group Europe, based in Paris. GM declined comment but said that it frequently talks to Fiat, which buys parts from the GM components group. AN

Chrysler, Ford idle 5 plants

ROBIN-LYN RAIMEY
Special Correspondent

Ford Motor Co. has idled three truck assembly plants this week, and Chrysler Corp. has extended downtime at a car plant and a truck plant. Three of the plants are in Canada.

Scheduled to go down today for two weeks are Ford's Wayne, Mich.; Lorain, Ohio, and Oakville, Ontario, truck plants.

Chrysler's Bramalea, Ontario, car plant and its Pillette Road full-sized van plant in Windsor, Ontario, will remain down this week.

Last week's U.S. truck production of 89,509 was down 0.7 percent from the previous week, but up 11.5 percent over the year-ago tally.

U.S. car production last week was 140,891, up 2.6 percent from the previous week, but 4.0 percent below last year's total.

In Canada, car production last week of 19,424 units was down 12.0 percent from the prior week and down 27.8 percent from last year.

Canadian truck production was 17,395, down 2.8 percent from the previous week and down 10.6 percent from last year.

General Motors accounted for 46.6 percent of last week's car production in the United States, followed by Ford Motor Co., 22.4 percent; Chrysler Corp., 9.6 percent; Honda of America Manufacturing Inc., 6.9 percent; New United Motor Manufacturing Inc., 3.0 percent.

Other shares were Mazda Motor Manufacturing (USA) Corp., 2.9 percent; Toyota Motor Manufacturing (U.S.A.) Inc., 2.9 percent; Diamond-Star Motors Corp., 2.7 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.0 percent; and Subaru-Isuzu Automotive Inc., 1.0 percent.

GM's Buick-Oldsmobile-Cadillac Group scheduled two shifts of Saturday overtime at the car plant in Wilmington, Del.; the Buick City car plant in Flint, Mich., and the car and truck plants in Lordstown, Ohio.

The Chevrolet-Pontiac-Cadillac Group scheduled a Saturday overtime shift at the Oklahoma City car plant, and the GM Truck and Bus Group scheduled two Saturday shifts at plants in Baltimore and Moraine, Ohio, and at the Fontiac (Mich.) West van plant.

GM of Canada scheduled Saturday overtime at the truck plants in Oshawa and Scarborough, Ontario.

Ford scheduled daily overtime at the Lorain, Ohio, and Louisville, Ky., truck plants.

Ford's truck plant in Kansas City, Mo., worked daily overtime and was scheduled for two Saturday shifts.

Chrysler scheduled daily overtime at its truck plant in Warren, Mich., and a Saturday shift at the St. Louis No. 2 minivan plant. AN
